The profession is suffering a succession of severe losses. We deeply regret to have to announce that Mr. Bunning is now added to the list. He died about noon on Monday last, at his house, No. 6, Gloucester-terrace, in the Regent's Park. His state of health had been several times referred to in our pages, and mention made of the compelled cessation of his professional avocations. He never recovered after the first effects of his exertions in preparing for the reception of the future Princess of Wales, in March last: before the reception took place, he was laid prostrate; and he was never afterwards able to return to Guildhall. For some two or three years previously, his friends and assistants had noticed that his multifarious and arduous duties had produced an effect upon him in the commencement of a wasting or *atrophy* of his frame. On the occasion of the preparations referred to, when the weather was cold and wet, he exposed himself much. Fatigue was increased by the difficulty of forcing a passage through the crowds that for several days covered the footways and roadway of the bridge, and streamed to the centre of attraction through the thoroughfares from all parts of London. At last, on one occasion, although he had been conducted by the police, who were in attendance upon him, he was so knocked about in getting through the crowd, that he was exhausted; and he sank down, and had to be taken from the Mansion House to his home. It may be truly said that he has been a victim to the bad organization of the City offices in the surveying and architectural department, as well as to that defective arrangement for traffic, of the streets of the City, which he had made so many efforts to get improved. His health, it was thought, would be restored by a sojourn on the Continent: he therefore procured leave of absence; and he was taken to Italy, and thence to Switzerland. But circumstances of climate or available residence, rendered change in each of these cases necessary; and at length he had to be brought again homewards, resting awhile in Paris. Hemorrhage of the lungs, however, came on; and he was placed on a bed, and carried to London in September, but to die. He lingered, however, till Monday; and, in the interval, he sent in his resignation to the Common Council in the terms mentioned by us at the time. In place of granting him, after the form of his request, such a pension, in just and kind consideration of his services, as the Council might deem right, and for so long as it might please God to spare his life, the Court passed a resolution requesting him to continue to hold his appointment until arrangements could be made for the due execution of the duties, the object being apparently to preserve to him his emoluments as long as possible. That his professional value, as well as his private worth, were appreciated by those who knew him best, it is needless to assert. Relief from labour, or sympathy, however, were alike too late; and we have now to afford the tribute to his memory, of some record of his life and works. His intellect indeed remained till the last.

James Bunstone Bunning was born on the 6th of October, 1802; consequently at the time of his death, he had just entered upon the sixty-second year of his age. His place of birth is believed to have been London, where his father was a surveyor. Of his early education we can learn no more than that he left school at the age of thirteen or fourteen. There are somewhat opposite statements as to the manner of his professional education: but the sum of what he gained by the help of others was small; and he certainly lacked many advantages as to the training for the formation of that artist-architect that many of his efforts, and his tastes and predilections in recent years, have shown he would have become. He went to his father's office, but he seems also to have been articled to Mr. George Smith. To the latter, however, he was indebted only for some of that love of accuracy which he became possessed with. His father died in 1819, which would be when James Bunstone Bunning was seventeen years of age or thereabouts. He may have been with Mr. Smith after that; but he could not have remained many years; for, he began practice very early. He married in 1826, or when he was twenty-four years of age, and on the anniversary of his birth, Miss Basan, a lady born in the West Indies, of Italian parents. Her good qualities and admirable management contributed to his success. This lady survives, in sorrow. From that time, he worked at his profession with ardour and with increasing results, obtaining many public appointments, which he retained till compelled to abandon them on being elected, twenty years ago, to his latest office in the City of London, one which is thought to have been less productive, immediately, of emoluments, than the offices which he gave up.

About the period of his marriage, he succeeded by great exertions, in obtaining the district surveyorship of Bethnal-green. He had some good friends; and through one of these he got the surveyorship to the Foundling Hospital estates. We are unable to follow the course of his avocations for ten years; but somewhere about 1835 or 1836, his design for the City of London School was selected in a competition; and the building was erected under his superintendence, the school being opened on the 2nd of February, 1837. This was six years and a half previous to his appointment as City officer. The building is Gothic in style. He sent a design and model in the competition for the Houses of Parliament; and somewhat later, in the case of the Royal Exchange competition, he contributed a design. He had taken great interest in the Royal Humane Society, whose Receiving House in Hyde Park was erected from his drawings. In 1839, he was appointed Surveyor to the London Cemetery Company. He made considerable alterations in the Highgate Cemetery, and subsequently laid out the Nunhead Cemetery, Peckham Rye, with all the roads and approaches. About this time also, he was Surveyor to the Haberdashers' Company, and built the Five Bells Hotel, together with the Railway Tavern, Hatcham-terrace, Albert-terrace, and many streets of houses at New Cross, all on the Company's Estate. About 1840 to 1841, he was appointed surveyor to the London and County Bank. He erected and converted buildings for the branches of this bank, in many towns, Canterbury, Chatham, Brighton, and Leighton Buzzard being of the number. About the same time, he built the Bethnal-green Union Workhouse, which cost about 25,000*l*. Other appointments previously to his City office, were those of surveyor to the Thames Tunnel, and surveyor to the Victoria Life Office. Also he was architect to the Chelsea Waterworks. Amongst his latest works in his private capacity, were the towers, now cut down, and some part of the approaches, of the Hungerford Suspension Bridge, the work of the younger Brunel. He also built a mansion at Lellingstone Dayrell, in Buckinghamshire, and altered one in the Regent's Park for the late Baron Vaughan.

On the 23rd of September, 1843, Mr. Bunning was elected to the office of "Clerk of the City's Works," Mr. Tite having been also a candidate. He was the twenty-first holder of the office, to which the first appointment was that of Edward Stone on the 21st of April, 1477. In 1847, the designation of the head of the office was changed to that of Architect. During the twenty years that Mr. Bunning held the appointment, he was called upon to design and carry into effect several most important buildings, involving an aggregate expenditure of more than three-quarters of a million, and to design numerous street improvements costing a million; and for which he made all the surveys and valuations, besides performing for the Corporation numerous other important duties, such as the attendance upon committees, and the management of the surveying and valuation business of the City lands, the Bridge-House Estates, the Coal and Corn Exchange, and the Markets, as well as the supervision of the police stations. His completed buildings and street-improvements represent but a small part of the labour that he was called upon to furnish for the annual sum that the Corporation allowed their officer in lieu of per-centage.

In 1845, Mr. Bunning designed a street which was to pass from the west end of Cheapside to Carey-street. In 1846 he planned and surveyed the line of New Cannon-street. This street was completed and opened for traffic, after about eight years, that is in 1854. In connexion with the design was that of a new street from Earl-street to the Mansion House. That improvement was only commenced; but it may be said to be now about to be completed, slightly altered, in the design of the Metropolitan Board of Works. Victoria-street, Clerkenwell, which, if we remember rightly, had been commenced by a Government commission, was continued to Coppice-row, and opened in 1855. Mr. Bunning also carried into effect many minor but important street improvements. Such were the widening of Threadneedle-street in 1816, and the continuation of Tudor-street to Whitefriars Dock, in 1849.

In 1848, he made a design for raising the Holborn Valley. This project he again brought forward, in 1860, in connexion with central rail-

way-stations, which he proposed should occupy the sites around the valley, and also be in connexion with two new streets from the meat-market hereinafter mentioned, to Holborn. Last year, he made designs for considerable improvements in the streets about the Coal Exchange, involving a new street thence to the Monument, and he proposed to widen Thames-street from Billingsgate to St. Magnus' Church.

Giving the list of his buildings as nearly as we can, in their order:—The Coal Exchange was completed in 1849; and it was opened on the 30th of October. There is great merit in the internal planning, if not also decorative design, of the rotunda. This feature of the plan has an iron and glass dome, and is 60 feet in diameter. The idea of the painted decorations illustrative of coal and the trade, was excellent: the execution only, by Sang, was not up to the idea. Of the external details, Italian in character, and indeed of some of the internal, where the roll-mouldings take the form of ropes, the less now said the better. The City Prison, Holloway, of "Castellated Gothic" character, was completed at the beginning of October, 1852. It contains 436 cells for male and female prisoners. In 1853, Billingsgate Market in Lower Thames-street was completed; and it was opened on October the 9th. Much praise was given to it at the time. The front next the river, in Italian style, of red brick and stone, and with a central campanile, is hardly fitted to the site. In the following year, on the 28th of March, was opened the building of the Freemasons' Orphans' Schools, at Brixton. It is also Italian, and red brick and stone, and is one of Bunning's best works. His most important completed work, however, was the Metropolitan Cattle Market in Copenhagen Fields, which was opened by the late Prince Consort on the 15th of June, 1855. This work was the result of much study in all the details, as those of water-supply, paving, rails, and whatever else. The buildings are Italian. A clock-tower in the centre, rises from a duodecagonal building, and is in height 100 feet. Mr. Bunning had previously made a design for remodelling the market on the Smithfield site, or bordering it, at the time when the Corporation were desirous that the central position should be retained. This design was publicly exhibited in a model. Two courts of law in Guildhall were erected in 1856. About the year 1858, was commenced the entire reconstruction of the interior of Newgate gaol; the exterior, designed by George Dance in 1788, but since somewhat altered, being left untouched. The male side was first undertaken; and the work was continued on the female side in 1861. In 1858 were erected Rogers's Almshouses in Brixton, in "the Domestic Gothic style." In the same style is the Pauper Lunatic Asylum for the City, now in course of erection at Stone, in Kent.

Last year, Mr. Bunning made a design for an open timbered roof for Guildhall. The contract has been taken; but owing to the festivities of this year, it has not yet been carried into execution: the works are, however, in progress.

The Corporation have not during the period of Mr. Bunning's tenure of office, more than previously, effected the street improvements that would have been worthy of the City of London, and in which the special skill of their architect might have immensely assisted them. But they have had some "good intentions;" and in designs that were not carried into execution, Mr. Bunning had plenty of work upon him. In September, 1855, he made a design, often referred to, for lodging-houses for the poor, to be erected on a portion of the vacant land in Victoria-street, Farringdon-street. Then, in 1857, in May, followed a design for converting the west wing of Farringdon Market into baths and wash-houses; and, in October, one for converting it into a police station. In 1858, in November, there was a design for increasing the width of London Bridge by a projecting footway on each side, to be supported by iron cantilevers, so carrying the width of the bridge from 54 feet to 70 feet 6 inches. In February, 1860, there was a design for improving the library and front of Guildhall. Lastly, there was the design for the meat-market, Smithfield, in 1861, to be in connexion with the Metropolitan Railway.

In addition to his other labours, however, Mr. Bunning was each year required to design and superintend the fittings and decorations for the Lord Mayor's banquet in Guildhall, and for other entertainments, excepting only the recent one when the Prince and Princess of Wales visited the City, and when Mr. Crace was allowed to do more than had been permitted to his predecessor. Mr. Bunning's decorations, contradistinguished from these last, were essentially temporary, and merely an artistic mode of concealment of unsightly and dirty walls, in a building which it was expected would soon require more complete and permanent reparation and beautification. So considered, they rightly received the praise of the newspapers; and the praise was unfairly withdrawn by the misplaced contrasting tone to which the journals veered round when the present, rather permanent, decorations were shown to them. An artist who has once done his best, of course cannot change every year *ad infinitum*, even producing merely novelty; but independently of the fact that Mr. Bunning's decorations were correctly treated as temporary, they were made productive of some charming pieces of effect. Sculpture was often exceedingly well displayed, whether or not as it would have been by sculptors. Indeed, Mr. Bunning's aim at the introduction of sculpture as a feature in architecture, was one of the points to be noted in the estimation of him as an architect; and could he have been accorded more power of influence over art-work in the City generally, we ourselves know well, that he would have striven to place the City in the arrangement of open spaces, and the erection of fountains, in rivalry with new Paris. He always returned from the French capital with some results; and the writer of these lines has repeatedly come upon his traces in those establishments of practical decorators, and of dealers in art-manufactures, with which Paris abounds. Besides the decorations of the Lord Mayor's banquets, this class of his works included those of the entertainment at which her Majesty was present on the 9th of July, 1851, that to the Emperor and Empress of the French on the 19th of April, 1855, and one to the King of Sardinia on the 4th of December of the same year, and of the International Exhibition Ball on the 17th of July, 1862. The arrangement of Temple Bar on the occasion of the Wellington Funeral, which was very remarkable, should also be added. Fresh in every one's recollection, are the decorations of London Bridge, the Mansion House, and Temple Bar, and the seats along the south side of St. Paul's, works which have been already alluded to as leading to his untimely end. It is sufficient here to say that the effect of the decoration of London Bridge, has not, we believe, been surpassed on any recent occasion in any capital of Europe.

Referring to his taste for sculpture, it should be added that he effected something towards the object, long urged upon the Corporation and the City companies, of the expenditure of some of their resources on permanent works of high art, applied to the decoration of the halls. In 1851, he suggested that the sixteen niches in the Egyptian Hall of the Mansion House, should be filled with marble figures representing persons or events remarkable in our national history or poetry. He met with some opposition even at the hands of sculptors; and the average sum allotted, 700*l.* for each figure, was not deemed adequate. The suggestion has, however, to the credit of the Corporation and all parties, been carried out.

When Mr. Bunning was first elected to the office for the City, he received a salary of 1,500*l.* a year; but after paying out of that, expenses, the returns to him did not exceed 1,100*l.* The remuneration was raised, however, as his labours and expenses increased. The salary became in 1847, 2,000*l.*, giving him 1,400*l* net. In 1848 it was 2,500*l.*; and so it remained till 1851, when it was made 3,500*l.*; the expenses, however, having so much increased that the net return to him was only about 2,500*l.* He may have received an occasional sum of 100*l.* or so, on extraordinary occasions; but his total net receipts were lately estimated by him as having been 32,000*l.*, for which he had had to perform surveying and valuation work (above referred to as very heavy), and to design buildings costing a sum, the 5 per-centage upon which would alone have been 38,000*l.* at the least.

He had no children; and, though owing to the simplicity of his habits mainly, he has left a fair property after a most arduous and praiseworthy career. The great features of his character were his strict integrity, against which there has never been a suspicion of the reproach sometimes whispered, and unjustly often, against men in similar positions. He made himself independent by his labour; but his principles and rectitude would have kept him so: whilst he had the courtesy of manner which could be fostered by such circumstances and conditions.

As an artist, he was self-taught; and perhaps he may be said to have been lacking those special art acquirements, and that vigour as well as cultivation, which are never to be gained so well as in youth. But he was one who continued in these matters, always educating himself. Some of his works have details that should not be approved of; but those productions, in the art architectural, produced under an accumulation of far different work, are not due monuments of his real ability.

Mr. Bunning was a fellow of the Institute of British Architects, and of the Society of Antiquaries. As an antiquary, credit is due to him for the efforts he made successfully to preserve, below the Coal Exchange, the remains of a Roman building found there during the excavations. Mr. D. A. Cobbett, of Fenchurch-street,—to whom, as well as to Mr. Bunning's principal assistant of late, Mr. Allen, and to his old and influential friend Mr. William Hawes, we are indebted for some particulars,—was his pupil from the year 1836, and continued with him until the City appointment, and adds testimony to the fact of high qualifications from which he, the pupil, had the good fortune to be placed in the way of benefiting.

IMPERFECT REPRINTS OF WALPOLE'S "ANECDOTES OF PAINTING, &c."*

A VERY happy judgment was passed at my father's supper-table (the place at home where he most unbended to those he liked), and in my hearing, on Walpole and his well-known "Anecdotes." The talk, at the time to which I refer, touched on the state of "early art in England, and the light which the rolls and records of the kingdom throw on its condition." The late Thomas Hudson Turner (whose work on "Early Domestic Architecture in England," and on "The Queen Eleanor and other Early English Household Expenses," will preserve his name) was present: "Walpole" (said Turner) "though a pensioner of the Exchequer, had no acquaintance with the dusty records in the Tower; he drew his information entirely from Vertue's notes, which he dressed up admirably, I admit, and *white kid-glove handed*, before a bastard Gothic window looking on a lovely lawn, and the silver Thames, or on a table placed near a blazing fire, in a perfumed room; with, in short, all the advantages which literature requires, and wealth could at once supply."

This judgment I believe to be a true one. Never was the dry-as-dust industry of one man enriched and enlightened so happily, and turned by admirable art to so successful an end, as Walpole's purchase of Vertue's memoranda of Vertue's widow, was turned by the great letter-writer of Arlington-street and Strawberry-hill. Would that the MS. collections of Vertue's friend, William Oldys, made for the History of Dramatic Literature in England, had fallen into hands equally careful and equally competent. Would that Walpole could have been annotated by a Vertue!

I now resume my notes on the *two* editions of "Walpole's Anecdotes," published since Walpole's death, by Mr. Dallaway and Mr. Wornum.

Wornum, p. 18 (Lady Lucan). Mr. Wornum should have given us Walpole's own note (Works, iii., 400):—

"Margaret Smith, wife of Sir Charles Bingham, Baron Lucan, in Ireland."

Wornum, p. 19 (Lady Diana Beauclerc). Mr. Wornum should have given us Walpole's own note (Works, iii. 400):—

"Eldest daughter of Charles Spencer second Duke of Marlborough; married, first, to Frederic St. John Viscount Bolingbroke, and afterwards to Topham Beauclerc, only son of Lord Sidney Beauclerc."

Wornum, p. 19 (Mrs. Damer). Mr. Wornum should have given us Walpole's own note (Works, iii., 400):—

"Only child of General Henry Seymour, Commander-in-Chief in 1782 and 1783, by Lady Caroline Campbell, Countess Dowager of Ailesbury. Mrs. Damer was widow of John Damer, eldest son of Joseph, Lord Milton."

Wornum, p. 700. Mr. Wornum has left out the following very important note by Walpole to the italicized words in his author's text, "*The Art of creating Landscape*" (Works, iii., 438):—

"I have not been able to please myself with a single term that will express ground laid out on principles of natural picturesque beauty, in contradistinction to symmetrical gardens; but I am very clear that the designer of modern improvements in *landscape gardens* (as I will call them, for want of a happier appellation) ought by no means to be con-

* See p. 751, *ante*.

founded with the domestic called a *gardener*; especially as a word presents itself which will distinguish the different provinces of designing a garden, and of superintending it when laid out. The latter will remain *the* gardener, the projector I should propose to denominate a gardenist."

What do Sir Joseph Paxton and Dr. Lindley say to the suggestion in Walpole's *recovered* note?

Wornum, p. 704 (Nollekens). Mr. Wornum has overlooked the following note of his author (Works, iii., 441):—

"There is an account of the eldest son Joseph, the statuary, in the *European Magazine* of June, 1788, p. 387."

Wornum, p. 709 (Samuel Scott). Add to the words "London Bridge" and "Custom House," in the text, the following note, omitted by Mr. Wornum (Works, iii., 445):—

"In the collection of Sir Edward Walpole, who had several of the best works of Scott, Lambert, Oram, and Wootton."

Wornum, p. 745 (Hogarth). Add to Mr. Wornum's Walpole's Catalogue of Hogarth's Works the following ten articles printed by Walpole (Works, iii., 471), but omitted by Walpole's editor:—

75. Rich's Glory.
76. Beggar's Opera: doubtful.
77. Scene in an opera.
78. Orator Henley's Chapel: doubtful.
79. Æneas in a Storm: ditto.
80. Wolfe's Monument: very doubtful.
81. Heads from the Cartoons: ditto.
82. The Frolick; a small copy of "The Search-Night," No. 35.
83. Moses brought to Pharaoh's Daughter: by Hogarth and Luke Sullivan.
84. Boys drawing from Nature. Subscription-ticket to the above and "Paul before Felix;" a variation of No. 20.

Wornum, p. 746 ("Views taken by Mr. Scott"). Add the following, omitted both by Dallaway and Wornum. I follow Walpole's Works (iii. pp. 472-3):—

Additions since the former Edition.

Small arms of Gamble: etched by Mr. Ireland.
Ditto to "Biographical Anecdotes:" ditto.
Hogarth's Cot: ditto.
Hogarth's crest: by Livesay.
Copy of "The Rape of the Lock:" by Mr. Ireland.
Arms for the Foundling Hospital: Livesay.
Coat of arms with four terms; an impression from plate; different from No. 21, Class 1.
Subscription ticket intended for Sigismunda: doubtful.
Hogarth's portrait.
Thomas Pellet, M.D.: by Hall.
Bullock, the comedian: ditto.
Sir James Thornhill: by Mr. Ireland.
Hogarth: ditto.
Black Girl in Bed: copied by ditto.
Variation of Orator Henley christening a Child: ditto.
Shepherd Boy: ditto.
The Politician: by Sherwin.
A landscape: by Mr. Ireland.
Jack in an Office: ditto.
Characters who frequented Button's Coffee-house; four plates: ditto.
Woman's head, as Diana: ditto.
Head of a black girl: ditto.

Wornum, p. 749 (Zincke). To the passage in Walpole's text relating to the fine specimens of *Zincke* in the collection of the Princess Amelia, add the following note from Walpole's own text (Works, iii. 475):—

"There are ten,—two of the late king, as many of his queen; the Duke of Cumberland when a boy, and the five princesses his sisters. Princess Amelia had them newly set in two fine gilt frames and glasses, and gave them, in 1763, to the Prince of Wales."

To which I will add this query,—Where are they now? Zincke is so inimitable a master in little, that the whereabouts of his works deserves to be fully and accurately known.

Wornum, p. 875 (Cecill the engraver), note 4. For *one* of Cecil's works, read *none*.

Wornum, p. 876. For Robert *Walpole*, read Robert *Walker*. Dallaway (v. 73) has the same error.

Wornum, p. 877. A list of "Additional Portraits" is given as Walpole's, which it certainly is not.

Wornum, p. 879. Similar error twice over.

Wornum, p. 880. For "these volumes" in Mr. Wornum's text read "this work."

Ibid., note 3. Here is an evident correction of Walpole's text:—"He" [Peacham], says Walpole, "wrote a little tract with some honour:" humour is the reading in Mr. Wornum's, and no doubt correctly so.

Wornum, p. 884 to p. 895 ("Life of Hollar"). Mr. Dallaway's "Life of Hollar" is printed as Walpole's—and very unlike it is to Walpole's manner.

Wornum, p. 895. In "my first volume," says Wornum for Walpole; in "my second volume," says Dallaway for Walpole; in "the preceding volume," says Walpole for himself.

Wornum, p. 896. Text a mass of confusion—part Walpole, part Mr. William Smith, of Lisle-street and Southwick-crescent.

Wornum, p. 898 ("Reign of Charles the Second." There is no such division in Walpole.

Wornum, p. 901. "Additional portraits" is assigned to Walpole and is not in Walpole.

Wornum, pp. 916 and 917. More confusion and more omission.

Wornum, p. 930. A motto from Quintilian is prefixed ostentatiously to the memoir of Evelyn It is not in Walpole. This interference with an author's text is unpardonable.

Wornum, p. 930. Five top lines of text inserted.

Wornum, p. 941. More matter inserted improperly as text.

Wornum, pp. 942-3. Same observation.

Wornum, p. 953. Same observation.

Wornum, p. 962. Add to note 7, Walpole's own words (Works, iv., 100), "They have since been sold separately."

Wornum, p. 963. A valuable piece of information communicated by Mr. W. Smith, late of Lisle-street, stuck into text.

Wornum, p. 965 (Sir Nicholas Dorigny). Add to text "born in France" Walpole's additional words, "at Paris in 1657."

I will not quit (nor did I intend quitting) my *connected* notes on Walpole's "Anecdotes," more especially after what Mr. Wornum says by way of apology and defence of himself in the *Builder* of last week, without a few words in favour of the *good* service he has done his author. Some of Mr. Wornum's notes are both new and useful. He chose, however, to forget, when he penned his note, p. 552, about Grinling Gibbons's birthplace, that he was indebted for his information to the columns of the *Illustrated London News*, and the courtesy of the writer in the *News*, viz., myself.

PETER CUNNINGHAM.

FOREIGN ARCHITECTURAL AND FINE ART SERIALS.

Der Schweizer Holzstyl in seinin Cantonalen und Constructiven verschiedenheiten vergleichend dargestellt mit Holzbauten Deutschlands von Ernst Gladbach, Professor am Polytechnicum in Zürich. Lieferung II. Darmstadt: Carl Koehler's verlag. (Inhalt der Zweiten lieferung.) 1. Das Haase Hoefli bei Steinen, CII. 2. Heuschoppen und Stallung in Fluelen, DII. (obgleich dieses Blatt ein Farbendruck ist, so erhalten die verehrlichen subscribenten dasselbe doch nur als e infaches Blatt angerechnet.) 3. Das hohe Haus zu Wolfenschiessen, EII. 4. Dasselbe, EI 2. 5. Hauzthüre zu Hochsteig FII. ☞ Das Werk erschient in etwa 10—12 Lieferung zu 5 Tafeln mit Text und Holzschnitten.—1. Farbendruck zählt für 2 schwarze Tafeln. Preis jeder lieferung: Rthl. 2, oder fl. 3, 30 kr. rhl. ☞ Alljährlich sollen 3 bis 4 Lieferungen erscheinen. Die Subscribenten verpflichten sich zur Abrahme des Ganzen.

From Darmstadt, in this publication we have shown, with a master's hand, specimens of Mediæval Swiss design and construction. Unlike the work, by Professor Hochstetter, mentioned in our last, this is accompanied by descriptive letter-press, interspersed with details in woodcuts. Two numbers only have been published. The first contains four plates, besides the ornamental frontispiece; the second five plates.

As in our own country, the Swiss of the Middle Ages appear to have lavished the greatest care and labour and wealth upon the construction of their dwellings. The first plate gives a view of the Manneberger Muhle, near Effretikon, in the canton of Zurich. A bracketed strut in this house is inscribed "Ulric Bruzer, 1675." The plan of this edifice may be called a quadrangular oblong, with two entrances into it—the principal one of which is on the west side, the inferior on the north. There are two entrances into the basement, one of which is large enough to admit a vehicle; the second one is through the external flight of steps that leads to the landing in front of the main entrance. There are no overhanging galleries here; but the rich and picturesque appearance it possesses is produced by the half-timbered work of which it is built. The rooms forming, as it were, the dwelling-place of the inhabitants, are distinguished on the exterior from those used as offices by richly-carved panelling. On the lower stories eight windows are only divided from one another by pilasters; immediately above these are eight panels corresponding in size to the windows; and above these, with intermediate carved mouldings and panellings, five more windows, which, in their turn, are also surmounted by a tier of panelling. A vane rises from the apex of the roof. The half-timber work of the whole house is painted red, the shutters of offices green, the panelling just mentioned green picked out with white; the mouldings and elaborately perforated boards, boarding the outer jambs of the windows of the main part of the house, are coloured yellow. The details of the ornamentation are of an approximation to our Tudor style. This highly ornate fabric is surrounded by that invaluable adjunct to rural architecture—picturesque scenery. We cannot but admire how the requisite conditions entailed by this mountain scenery and its attendant storms and avalanches were secured by the old inhabitants. First a solid and high basement of stone placed them high and dry above the frequent snows and occasional floods, and the wide-spreading roof kept their houses sheltered from torrents from above. The peculiar construction that was inevitable from these requirements, instead of being hidden, was ornamented, as by our own Mediæval builders.

The beauty to be obtained by ornamented construction in this style is particularly evident in two plates, showing a view, plan, and sections of an ancient house near Fischenthal, known as Rossweisli. This is an oblong house, about twice the width of its length. The entrance divides it into two portions; that on the right hand, on entering, containing the superior apartments, that on the left the offices. An intersecting gable over the principal chambers breaks the otherwise long low-pitched roof. This gable has four crosses hanging from its double barge-boards, formed by horizontal and vertical pendants dovetailed together, and notched upon as many wall-plates, the extremities of which are supported from below by braces having their front edges waved. There are three tiers of windows, marking as many stories, beneath this gable. The lowest contains seven lights, grouped under two lintels. The lower half of each light is furnished with a wooden panel, with a lozenge-shaped moulding upon it, and the jambs are fringed with wavy and perforated boards. The lights of the second story consist of two window-openings, with two lights under each lintel. These are also furnished with the lozenge ornamented panelling and wavy boards fringing the jambs. The third story has four lights grouped under one lintel. These slightly project upon a corbel and blocks, and also possess the fringed and lozenged ornamentation uniform with those of the lower tiers. The basement here is exceptionally furnished with a double tier of window-panes placed close to the ground; but the ill effects likely to accrue from this arrangement are somewhat modified by the presence of strong flap shutters furnished with stout hooks, rings, and *fleur-de-lys* hinges. The glazing of the three upper tiers consists of small circles of glass in leadwork, having much the effect produced by the patterns made by the bottoms of bottles arranged in rows. The landing to the entrance to the house has wooden steps to it, and an ornamental wooden balcony paling.

"Das Hohe Haus zu Wolfenschiessen," 1586, the subject of a plate in the second number of this work, is another admirable specimen of ancient Swiss architecture. This is a two-storied house, having two extra stories in a high-pitched roof, the apex of which is hipped and surmounted with a spirelet. There are no galleries or balconies here; but the windows of every story are sheltered by louvre or penthouse roofing supported on corbelled open brackets. And besides the fringed window-jambs, further ornament is obtained over the lintels of the lower story by floriated pediments in low relief. The front of the parapet round the landing of the entrance has a dial upon it, and vines are trailed up this side of the house. Beneath one of the windows on the lower story are two shelves, with wavy-faced brackets, on which ten bee-hives and their busy tenants are basking. There are openings into the stone basement here; but they are small and deeply recessed: between two of them on the prin-

cipal front is a small niche with a figure in it, and a second sundial. A plate of a house near Steinen, on which vines are trailing and festooning, shows us the more modest abode of the peasant. This consists of but one story, with an attic in the apex of the roof. The roof in this is, like some of the examples mentioned, dotted with large, heavy boulder-stones, which are placed at regular intervals upon it, and kept from falling off by resting upon stout pins fixed through the tiles to the rafters.

Systematische Darstellung der Bau-Constructionen, fur den Unterricht an der Koniglischen Bau-Akademie zu Berlin. Bearbeitet von A. F. Fleischinger, königl. Geh. Ober-Baurath, und W. A. Becker, königl. Land-Baumeister. Die Mauerwerks- oder Stein-constructionen. Lieferung 13. Berlin: verlag von Ernst & Korn (Gropius'sche Buch- und Kunsthandlung), 1863.

In this work on building construction the publishers have arrived at their thirteenth number. This is devoted principally to wall construction in brickwork, plain and ornamental, and shows the modes of forming arched doorway and window entrances through the same. These are of all forms,—flat, low-crowned, segmental, semicircular, pointed, &c. The specimens of ornamental brick bridges would be of special use to railway engineers. There are numerous modes of ornamentation shown,—projecting key-stones and labels, perforations, rims, the introduction in courses of coloured bricks, stones, and marbles. This part is unaccompanied by descriptive letter-press; but all who have eyes can read its skilful delineations. There are caps of columns and springers shown in the Renaissance style, as well as an illustration of brick arcading. Some perforated parapets are worthy of reference.

Famiglie Celebri Italiane. Dispensa 147. Della Rovere di Savona, Duchi d'Urbino. Parte I. Tre tavole di testo con due stemmi colorati nella prima, quattro tavole d' incisioni con ritratti colorati e monumenti. Prezzo senz' obbligo d'associazione Italiane 18 lire. Fronti per la stampa Farnesi di Parma, parte III. Della Rovere parte II. ed ultima. Condulmero di Venezia,—Camposampiero della Marca di Trevigi. Guidi di Romagna. Milano, tipografia delle Famiglie celebri Italiane, 1863. Si vende in Milano presso l' Editore nella contrada del Cappuccio, No. 16, e dai principali librai d' Italia, ed in Londra presso C. Federico Molini, No. 17, King William-street, e presso Bernard Quaritch, No. 15, Piccadilly.

We have, in this first number of this large folio-sized serial, the first six of a series of portraits of celebrated Italian families. They are executed with all the miniature-painter's art. The outlines are first printed as a copper engraving, and then the figure is painted by hand, leaving the backgrounds as plain copper-plates. The subjects chosen for reproduction are Giovanni della Rovere e Giovanna da Montefeltro his wife. These figures are beautifully coloured: they stand in one picture with their arms folded across their breasts, on either side of an uncoloured representation of the Virgin and Child. The faces are highly finished. The first Duke and Duchess d'Urbino, Francesco Maria and Eleonora Gonzaga, are represented as painted by Tiziano Vecellio da Candore. The originals of these pictures are preserved in the statue gallery in Florence. In this case the figures occupy the centre of their respective canvas, standing out from the pale line backgrounds with much vigour and brilliancy. The same statue gallery yields another subject, Francesco Maria II., Ducad'Urbino. This was painted by Federico Barrocci d'Urbino. He is clad in armour, and has an orange-coloured scarf tied over his breast. A sixth notability, Guidubaldo II., another Duke d'Urbino, forms a sombre contrast to the bright hues of this gallant-looking personage. He is attired in a short brown cloak, pierced with armholes, through which are inserted blue sleeves. The faces and hands of every figure are most painstakingly painted. Not the less important part of the work, however, consists of the letter-press, which furnishes the genealogies and heraldry of these prominent figures in Mediæval Italian history. There are, also, copperplate engravings of the bronze sepulchral monument of Sisto IV., preserved in the Vatican; and of the statue of Francesco Maria della Rovere, Duca d'Urbino, existing in the courtyard of the ducal palace in Venice. The heraldic devices are given in their colours proper. The whole will comprise the pedigrees, portraits, monuments, heraldry, &c., of extinct and living Italian families of distiction,—*famiglie celebri Italiane.* A table is appended of ninety-six of those thus destined to figure in modern European illustrated literature. It is, perhaps, needless to say that in it will be found the names of many already familiar to the art-loving and reading portion of the English public,—Sforza, Castiglioni, Visconti, Pico, Medici, Piccolomini, Foscari, Cesarini, Rossi, Gonzaga, Boncompagni, Colonna, Aldobrandini, Strozzi, Orsini, Massimo, Manfredi, Farnese, Ariosto, Torelli, Savoja, Acquaviva, Pallavicino, Adorno, Buonarotti, &c. &c. Each family will be given separately. The prices will vary according to the importance of the family, ranging from 6 lire Italiane for the family of Rossi, to 95 lire for the Medici, in seven parts, the whole amounting to 1,837 lire.

Châteaux de la Renaissance. Monographie du Palais de Fontainebleau. Dessinée et gravée par Rodolphe Pfnor; accompagnée d'un Texte Historique et Descriptif, par M. Champollion-Figeac, Bibliothécaire au Palais Impérial de Fontainebleau, Chevalier de la Légion d'Honneur, etc. Livraisons 68, 69, 70, 71. Paris: A. Morel et Cie., Libraires-éditeurs, 18, Rue Vivienne. 1863.

This is a grand work, in tone and tint, like to the ponderous tan-coloured volumes of the beginning of the last century, when price was not taken into consideration. The monograph of the Palace of Fontainebleau will be completed in seventy-five numbers, but should this quantity be exceeded, the extra parts will be furnished gratuitously to subscribers. The work as a whole forms a set of monographs relating to the most celebrated habitations of kings and nobles, in the fourteenth, fifteenth, and sixteenth centuries. One volume has already been issued: this relates to German Renaissance. The *livraison* before us contains five large plates, showing the Court of the White Horse (*le Cour du Cheval Blanc*), with its pavilions, clock towers, *escaliers*, and Trinity chapel; a longitudinal section of the last-mentioned chapel; a specimen of the mosaic pavement from the nave; a carved panel from the gallery of Francis I.; and the third picture on the left on entering the same gallery, representing *L'Embrasement de Catane.* They conjure up all the romance of the French court under the *ancien régime*; and the shade of the first Napoleon, who passed many of his eventful days at Fontainebleau. Produced as much for archæologists and artists as for the general public, a superior excellence pervades the work, an excellence we are happy to acknowledge and point out. The plates are all drawn by several, MM. Lecocq & J. Penel, Bury & Massard, J. de Garron, Oberlies, Obermayer, &c. We would especially commend the execution of the chromo-lithographic plate of the Mosaic *dallage* in the nave of the chapel of the Trinity: the result is marble-like.

Palais Châteaux, Hôtels, et Maisons de France, de Quinzième au Dix-huitième Siècle. Par Claude Sauvageot, Dessinateur et Graveur. Paris, A. Morel et Cie., Éditeurs, 13, Rue Bonaparte, en face de l'École des Beaux Arts. Livraisons 34, 35.

The palaces, castles, hotels, and houses of France from the fifteenth to the eighteenth century, are prolific subjects to illustrate: they are undertaken by M. Claude Sauvageot, draughtsman and engraver. The 34th and 35th parts present us with six plates engraved in the most careful, neatest, and most tasteful French style. Like as a lady's drawing-room dress appears when fresh with the "bloom" upon it from the court milliner, Claude Sauvageot's engravings are spotlessly crisp and sparkling. A charming elevation of the "Façade méridionale sur la cour" of the Château du Pailly (Département de la Haute Marne), forms the first plate in the current part of his work, and the remaining five subjects comprise the chimney-piece, sculptured as the chimney-pieces of the period are, usually, up to the rafters of the ceiling, of the guard's hall in the Hôtel de Vogüé (at Dijon); arcade forming the principal part of the Château Tanlay (Département de l'Yonne); plans of a manor-house, and of the principal entrance to a castle; and plans and elevation of a large brick chimney-stack from the Château of François I. (at St. Germain-en-Laye).

La Guienne Militaire: Histoire et Description des Villes Fortifiées, Forteresses, et Châteaux, construits dans le Pays qui constitue actuellement le Département de la Gironde pendant la Domination Anglaise. Par Léo Drouyn, Membre de l'Académie Impériale des Sciences, Belles Lettres et Arts de Bordeaux; de la Société Impériale des Antiquaires de France, de l'Institut des Provinces, Inspecteur de la Société Française d'Archæologie, Professeur de Dessin au Lycée Impérial de Bordeaux. On s'abonne à Bordeaux chez l'Auteur, Rue Sainte-Sophie, 30, au Coin de la Rue de Gasc; et chez les principaux Libraires. À Paris, chez Didron; Rue Saint-Dominique-Saint-Germain; Derache, Rue du Bouloy, 7. Livraison 39. 1863.

This quarto is to consist of 50 *livraisons*, at three francs a number: about half the work is already published. The present number relates to the Châteaux de Semignan, Roque nègre, Naugent, Landiras, Castera, and Castelnau-de-Cernés. The three plates, Castelnau-de-Cernés, Agassac, and Le Castera, are more artistically pretty than practically useful for architectural purposes; but the text is interspersed with plans and a few details. Seeing that this part of France was long subject to England, we need not be surprised at the English air of some of the crumbling ruins. Le Castera, in particular, might be the remains of an Edwardian pile in the heart of England. As in our own country, many of these interesting remains are used as farm-houses. It is an attractive subject; and it is all the more pleasant to know that the day has come when a Frenchman can generously own and devote an entire work to buildings anciently under the *domination Anglaise.*

Villas, Maisons de Ville et de Campagne, composées sur les Motifs des Habitations de Paris Moderne, dans les Styles des XVIe, XVIIe, XVIIIe, et XIXe Siècles, et sur un Choix des Maisons les plus remarquables de l'Etranger. Par M. Léon Isabey, Architecte, Inspecteur des Palais Impériaux; et M. Leblan, Architecte-dessinateur. Chromo-lithgraphiées par MM. Allard, Aubrun, Bachelier, Chenneveau, Walter, etc. Cinquante-quatre Planches, Chromo-lithographiées, petit in-folio, formant 18 Livraisons de 3 Planches, suivies d'un Texte explicatif. Prix 70 francs. Paris: Libraire d'Architecture et des Beaux-Arts, A. Lévy, 29, Rue de Seine. Liv. 12. 1863.

Each number of this folio contains, as indicated on its title-page, three plates, representing plans, elevations, and sections of small French villas, such as are now gradually surrounding Paris. They are rather more fanciful than those that are hemming in old London. The spouting terminates in dolphins' heads, whose lithe length is twisted round each pipe for some 4 or 5 feet. There are two doors in the principal fronts,—one entered from the ground in the exact centre of the building; the other, which is exactly over it, entered from an outer landing, which is gained by a double flight of steps rising from both extremities of the house. The material for one structure out of the three is brick, in bands; the second, brick, in bands of colour, surmounted by a timber story and a Chinese tower; the third, banded bricks for the lower story, and timber and plaster for the upper. The chimney-stacks look dangerously high and fragile. The external window-shutter so common in Paris is abandoned, and a perforated plank or panel fixed to the lower half of the windows of the ground-floor of one design, and an ornamental ironwork placed before the lower half of the ground-floor windows of another. The third is unprotected by any device beyond a fringed window-cill, of a theatrical appearance. Villa architecture for small families is yet undeveloped in Paris. The demand for small private houses will, however, be sure to cause this branch to be better explored. The designs are thoroughly fantastic and thoroughly French, much as though intended to form the scenic background of a masquerade.

Norddeutschlands Backstein-Bau im Mittel alter. Von A. Essenwein, Architect. Hinterlegt bei Grossh. Badischem Ministerium des Innern. Eigenthum des Verfallers in commission bei J. Verth in Carlsruhe.

This is another costly work, printing in the German language. It contains views, sections, and details, both in plates and woodcuts, of ancient brick buildings in the northern lands. The number before us contains eighteen plates. Among the most noticeable of these are Romanische Kirchen, the Cathedral of Schwerin, the Marien Kirche in Prenzlau, Dobberan church, a sheet of spires, the gorgeously enriched gable of Nicolai Kirche in Wismar; all in out-of-the-way places not visited by ordinary tourists. The portals of perforated lattice-work to the church of St. Stephen in Tangermünde, and of the Gerichtshause in Brandenbourg, are wonders of delicate workmanship. The letter-press treats of doors, portals, pillars, arches, friezes, cornices, buttresses, piers, chimney-stacks with peculiar tops to prevent nuisances from smoke, gables, towers, and

spires. In this, as in most of the serials under notice, there are many details that would be suggestive to English architects. This work, as well as that entitled a *Systematical Representation of Building Construction* (*Systematische Darstellung der Bau-Constructionem*), published at Berlin, would be, perhaps, most serviceable to London architects and builders, amongst whom ornamental brickwork is now gaining favour. To architects in such of our provinces where bricks are the principal building materials, the information here shown, both in the form of ancient examples and modern designs, would also be well worth its price. The designs for perforated brickwork introduced in the spandrels and pediments of doorways, as in the examples entitled *Portal am nord lichen Querschiff der Stefans Kirche zu Tangerminde & Portal am Gerichtshause zu Brandenburg*, should be studied, too, by our manufacturers of terra cotta.

Décorations Intérieures et Meubles des Epoques Louis XIII. et Louis XIV., reproduits d'après les Compositions de Crispin de Passe, Paul Vredeman de Vries, Sebastien Serlius, Berain, Jean Marot, De Bross, etc. etc., et relevés sur des Monuments de ces Deux Epoques. 100 Planches, gravées à l'eau forte, par Adams. Livraisons 17, 18. Paris: A. Morel et Cie., Libraires-éditeurs, 18, Rue Vivienne. 1862.

The reproductions of the works of the sixteenth and seventeenth century masters depicted are not very choice. They are but heavy examples of a heavy style. It is not every one who cares for a table too ponderous to be moved except by half-a-dozen men at a time; nor for eccentric chimney-pieces, altar-pieces, mural tablets, looking-glass frames, &c., that have no particular merit beyond their eccentricity, if indeed that should be allowed to be any. In France, there are many finer illustrations of the style that might show it off to more advantage. The specimens selected might be paired off with any of our very late debased Jacobean furniture and fittings. There is no descriptive letterpress. It is therefore puzzling to assign a purpose for some of them. It would be difficult, for instance, to assign a name to an object designed by Crispin de Passe, which might be either a bookcase, the front of a confessional, or the high dado of a hall, or neither.

Meubles, Religieux et Civils, conservés dans les Principaux Monuments et Musées de l'Europe, au Choix de Reproductions des plus remarquables Spécimens exécutés pendant le Cours du Moyen Age, de la Renaissance, et des Règnes de Louis XIII., Louis XIV., Louis XV., et Louis XVI.; précédé d'un Texte explicatif des Planches, et suivi d'une Table de Classement. Paris: à la Libraire d'Architecture de A. Lévy, Fils, Rue de Seine, 29; et chez tous les Libraires et Marchands d'Estampes de Paris, des Départements, et de l'Étranger. Livraisons 33, 34. Aout, 1863.

How many times, we would ask, is a justifiable limit to the extent to which readers may be dosed with the same illustration in different works? Here we have once more before us the well-known and often quoted *bahut en bois sculpté* from the Musée d'Epinal. With the exception of this chest, and a stone altar-piece from the church of St. Zenon Avérone, the chairs, tables, beds, credences, given in this number, are in the Renaissance style, designed by De Vriesse. There is no descriptive text.

Sculptures Décoratives: Motifs d'Ornementation, recueillis en France, Allemagne, Italie, et Espagne, dans les plus beaux Monuments élevés du XIIe. au XVIe. Siècle. Avec un Texte par Daniel Ramée, Architecte. Mode et Conditions de la Publication:—Cet Ouvrage sera composée de 150 Planches Lithographiées, de format grand in —4to., tirées sur papier de Chine, et divisées en 50 Livraisons de 3 Planches chacune, du prix de 1 fr. 75 cent. Paris: À la Libraire d'Architecture de A. Levy, Rue de Seine, No. 29; et chez tous les Libraires et Marchands d'Estampes de Paris, des Départements, et de l'Étranger. Livraisons 3, 4. Juin, 1863.

This is a neatly got up work, intended to illustrate the decorative sculptures as motives of ornamentation, chosen from the finest monuments from the twelfth to the sixteenth century, in France, Germany, Italy, and Spain. To all ordinary appearances, the six plates of subjects which form the third and fourth parts of this new serial are prepared originally from the subjects themselves for this work; but we do not hesitate to assert that M. Daniel Ramée, architecte, has largely composed his illustrations from photographs. M. Chapuy, the draughtsman, and M. Benoist, lithographer, have performed their parts with the usual French neatness; but they appear to have simply reduced or copied photographic views and details, without transferring the minute constructive features of a building as faithfully rendered by a photograph, and without acknowledging their obligation to the art. This is particularly noticeable in the views of the Porte della Carta, Palais Ducal à Venise, the Portique de St. Zenon à Verone, and the Porte Septentiale de St. Michel de Pavie, where there are unmistakeable evidences that neither draughtsman, lithographer, nor architect-director, can have personally inspected the subjects they profess to delineate.

Alterthumer und Kunstdenkmale des Erlauchten Hauses Hohenzollern. Herausgegeben von Rudolf Graf Stillfried Alcantara. Band II., Heft 3 (des ganzen Werkes heft 9). Berlin: 1863. Verlag von Ernst & Korn, Gropius'sche Buch a Kunsthandlung.

To ordinary English readers the plates of this work would be sufficient for its price. The portrait of Sophia von Polen, spouse of Friedrichs des Altern, Markgrafen von Brandenburg and her eight daughters, clad in scarlet with black and gold borders to their robes, is a fine specimen of the perfection to which the art of chromo-lithography has been brought. The Lady Sophia is arrayed in a robe of tissue of gold, diapered with a pattern in black and edged with ermine, and is depicted in a kneeling attitude, praying from a book resting upon a *priedieu*. The brilliancy of the colouring and exquisite finish of the faces are admirable. Nor can we speak with less praise of the execution of a plate showing the monumental memorial of Hermanns Grafen zu Henneberg-Römbild, and his spouse, Elizabeth Markgräfinn von Brandenburg. A monument to the memory of the Markgrafen Casimir and Georg von Brandenburg, is of curious design. The two nobles, encased in armour, with their plumed helmets placed on the ground before them, are kneeling on two stones on either side of the foot of a large crucifix. A skull and thigh bone are lying at the base of the cross between them. Around, above, and below this memorial are placed the arms the dead were entitled to quarter, and, in ornamental panels, below all, somewhat lengthy inscriptions. The last plate of the number before us is as fine as the first. It is a portrait of Jost Nicklaus I., Graf du Hohenzollern. His well-marked lineaments, his well-combed beard, broad-brimmed sombrero, furred coat, the chain thrown over it, and the ringed hand holding a breviary, are skilfully rendered, not more by the original artist than by the engraver. The letter-press relates to the different personages thus represented.*

SCIENTIFIC SPECTRES.

We are not such Quixotic apostles of the Society for the Diffusion of Useful Knowledge as to demand a system by which the ordinary mortals that come to be amused should be forced to remain to study; nor do we wish that pleasure-seekers, delighting in eating and drinking to the sound of a banjo, should be constrained into discussing scientific problems; at the same time we cannot notice without a mild feeling of satisfaction the recent successful appearance of science on the boards of our metropolitan places of amusement. Without expecting a scientific Millennium, we are inclined to look upon these amusing establishments as being, just now—in a small way—so many popular British Associations for the Advancement of Science. The striking and vivid scenic effects produced by very simple but scientific means, will not merely direct the attention of the masses to the latent resources and the yet untried applications of science; the more far-seeing among the caterers for popular amusement will soon perceive what an extensive field lies yet unexplored in the adaptations of modern science to the stage. It is true that the electric light has already made a public appearance in the famous rising-sun effect in Meyerbeer's *Prophète*; but many other phenomena of natural philosophy and chemistry only wait for an enterprising manager to produce a sensation equal to the (so-called) "Ghost" of Professor Pepper.

A paper read by Mr. Dircks to the British Association more than five years ago, and copied at the time into one or two of our contemporaries, gave a complete account of the *modus operandi* adopted at so many places for producing the optical illusions now attracting such crowds. Our readers are probably aware that they can very fully carry out the experiment at any shop furnished with a plate-glass window. A spectator, in front of a plate of glass receiving the light from both sides, sees no reflection of himself, as the amount of light reflected in front of the glass is less than the quantity that lights up the back part of the plate of glass. If a quicksilver composition—or (as with artists' mirrors) a layer of black paint—or little or no light happens to be behind the glass, the image of the spectator is reflected from the plate. The effect is witnessed by simply diminishing the light at the back of a transparent plate, and by increasing the light on the object to be reflected. In the simple fact that these two operations are fully carried out, and in a hidden manner, consists the secret of the Polytechnic spectres.

Any one of our readers gifted with a good eyesight, and turning a deaf ear to the ingenious, though not ingenuous, explanations of Mr. Pepper, may unravel the whole mystery for himself—a mild mystery, favoured by the Chancellor's late permission for a delay in the publishing of Mr. Pepper's patent. He will notice on the stage several large plate-glasses fixed into a frame, the whole being inclined at an angle of 45 deg. (perhaps less) to the plane of the stage. An opening is made in front of the stage near the orchestra. In this opening—hidden from the spectators—are placed the actors, whose images reflected by the plate-glass frames produce the "ghosts."

By means of a common lenticular arrangement the oxy-hydrogen light is concentrated on the hidden actor or actors. As most of our readers are aware, the oxy-hydrogen light is but simply a burning jet of one volume of oxygen and two volumes of hydrogen playing on a lump of quicklime. The spectral image appears to and disappears from the spectators accordingly as the light is shut on or off, by means of a slide to the apparatus. To the spectators at the upper galleries of a theatre, the spectres seem to rise off and at some distance from the level of the stage.

A correspondent writes:—"It is a pity for Mr. Dircks, himself a patent agent, that he did not at once patent his plan himself five years ago. He would have saved himself much trouble, and have kept the cynically-inclined from pointing to a patent agent as another instance of the proverbially ill-shod shoemaker's wife. What Mr. Pepper has a right to patent I really cannot see. It surely cannot be the application of the oxy-hydrogen light to Mr. Dircks's apparatus? If so, I would advise the rebellious seceders from licences to use the electric light. However, by the time the patent is published, and we really know what is patented, the plentiful harvest of shillings will be gathered in, and the fickle multitude will require new illusions."

A curious extract, lately copied into a popular periodical, from the "Natural Magic of Baptista de Porta," would seem to prove that the principle of these spectral images was known in Italy during the Middle Ages. However, there is nothing like a patent for infusing new blood into old ideas; and the piece of witchcraft of three centuries ago is now an optical experiment, that can be seen for sixpence a head. The Mediæval inventor's pursuit of knowledge probably ended in the slight difficulty of his being burnt as a wizard. The nineteenth century renovator is rewarded by a plentiful stock of the sovereign good, and we are very glad of it.

THE ARCHITECTURAL ASSOCIATION.

OPENING CONVERSAZIONE.

On the 30th inst., the Architectural Association opened the session with a *conversazione* at the Gallery, in Conduit-street. The president, Mr. T. Roger Smith, having taken the chair,

The prize for an essay on "Vaulting and Groining" was presented to Mr. Richard R. Bayne, who also obtained the first prize for sketches in the class of design. The second prize was presented to Mr. John Johnson.

Letters were read from various leading architects, expressing regret that they were unable to attend.

The President then delivered his inaugural address, in the course of which he said:—

Let me, then, commence by reminding you that we have this day to congratulate ourselves on our society's having attained its majority. It has completed its twenty-first year; and in celebrating this night that auspicious event, I think

* We shall carry our list farther. Meanwhile let us add, what many of our readers may be glad to hear, that all the publications we have mentioned may be found in the Art Library of the South Kensington Museum. The entrance-fee or subscription to the Museum includes the privilege of reading in the Library. This is not generally known.

we may very profitably cast a glance back from what we this day are to the early days, nay, to the commencement of our existence as an organized body. I do not profess to have any personal knowledge of the early days of this society; but several of its founders are still members, and therefore a very direct tradition connects us with its birth and early years. It would have been very interesting to trace out our early history from the minute-books of our meetings, but unfortunately the earliest records are now missing, and I may say incidentally that it will be fortunate if this mention of the loss may lead to our receiving any information as to their whereabouts. Happily, we have from the date of the reconstitution of the society, though not from its original establishment, memoranda placed on record in the shape of pretty frequent notices of its proceedings in the pages of the *Builder*, a journal to which, as well as to its more recent contemporary, I conceive this Association is on many accounts much indebted; and which is in a sense coeval with the Association, for, singularly enough, the first number of the *Builder* bears date the last day of 1842, the very year in which an association of students for architectural objects was first formed in London.

Up to the year 1842, then, no society existed in London of a nature to draw together such architectural students as were to be found among the pupils and assistants of the architects then in practice. I need hardly remind you that the amount of building done in the metropolis, and, as a consequence, the number of architects and of young men composing their staffs, stood greatly below what we are familiar with to-day. Still there were a considerable number of men so engaged throughout London, as was proved so soon as a suitable nucleus of a public character became available. Of these, some half a dozen were in the habit of meeting from time to time at a coffee-house in Castle-street, Holborn. Here, one evening, one of the number (Mr. Wylson, I believe, who is a member to the present day) let fall an exclamation which has been more than once quoted to me as having been the origin of the whole enterprise.

"What a pity it is," said Mr. Wylson, "what a pity it is that architectural draughtsmen do not know one another."

The hearers agreed, and means of bringing architectural draughtsmen to know one another were thought over, and so there was formed, for this object, and by a very small circle of friends, the Association of Architectural Draughtsmen. A complete list of the early members would be interesting, and could perhaps still be obtained, and would include, besides Mr. Wylson, Messrs. Colling, Sayer, Drayton Wyatt, and others well known at the present day.

The society remained under this form and name for four years. Its meetings were held in an upper room in Southampton-street, Strand, and were a source of pleasure, to those who belonged to it; but, I suppose it must have been rather too little public in its character, or too little known, for any great body of students to make use of it, for the number of members was never large. Some modification was needed,—a title that would embrace all classes of students, and arrangements that would attract them; and, above all, a certain degree of publicity. Fortunately, there was a powerful mind at work, equal to comprehending exactly the nature of the situation, and to devising appropriate arrangements to suit it.

Accordingly, in the early part of the year 1847, the scheme of an extensive reorganization of their society was laid before the members of the Association of Architectural Draughtsmen by Mr. (now Professor) Robert Kerr.

This very able paper was divided into two portions, the one showing what was required and what were the defects and crying evils of the existing state of things, and the other part proposing the remedy in the form of our association. The steps recommended by Mr. Kerr were taken, and the association was recast into the form in which we now carry it on; the name of it was fixed as the Architectural Association, and the laws were arranged substantially as they still are. I think no small amount of praise and thanks is due to those who thus organized our society on a basis so practical and so simple that it has endured from that time to this, usefully, and, on the whole, prosperously, notwithstanding fluctuations and changes; and has proved itself equal to meeting such emergencies or embracing such opportunities as in the course of events have arisen, without its being necessary to attempt any radical alteration in its constitution or government.

It appears, from Mr. Norton's address to us on occasion of our occupying these rooms for the first time, that there were thirteen draughtsmen members of the Association at the time when the alteration took place; and that a nearly equal number of new members were introduced, so that the new start was made by about five-and-twenty men, who continued for a short time to meet in the room in Southampton-street. Well, into these rooms the Association migrated in the autumn of 1847. The first *conversazione* (I presume also the first meeting there), was held on the 9th October of that year. An opening address on commencing the session 1847-48, was then delivered by the president for the year, which office was filled by Professor Kerr; and in the report of the proceedings contained in the *Builder*, I observe it stated that the number of members amounted to eighty, a rapid increase from the twenty-five of the previous February.

In the session (from 1848-49), which succeeded the one just referred to, Mr. Creeke was president, and I find that the opening meeting of that session was held under the presidency of Professor Donaldson, who introduced Mr. Creeke to the meeting. In this session an important step was taken for which I think the Society deserves great credit. The expediency of an annual Architectural Exhibition was canvassed, and the Association decided that it was right one should be held, *and that they would take the responsibility of it upon themselves.* Accordingly the *Builder* of the 9th December, 1848, contains an advertisement, signed by the well-known names of R. C. Dudley and W. W. Deane, who were our secretaries at that time, in which the intention of holding this exhibition next March is announced. The exhibition was so held, in the rooms of the Society of Water-Colour Painters, and the report presented at the opening of the following session states that it was highly successful, having been visited by an average of 500 persons daily. This exhibition was open free.

At the opening of the session 1849-50, we find Mr. Wigley's name as one of the secretaries, and Mr. Creeke as again delivering the presidential address. The numbers had now gone up from 97 to 140.

After the close of this session, again an Architectural Exhibition was held: it was opened free on the 12th of August, 1850, but a charge was made for admission on Saturdays. Nearly 10,000 persons visited it, and the fees for admissions on the Saturdays alone almost paid the expenses. In reporting this at the commencement of the session of 1850, the committee of our Association state that they are not desirous of keeping the direction and responsibility of this Exhibition in their own hands; and then, or about then, the body of subscribers and committee still connected with the Exhibition was formed. I find that at a late period of the year 1851 a meeting was held to account for no exhibition having been held in that year; and it seems not to have been till 1852 that the annual exhibitions were resumed. Here we leave one of the valuable offshoots of our good Society, and one cannot do so without some tinge of melancholy when we contrast the daily crowds recorded as present in those two first years, and the expenses paid by a charge on the Saturdays only, with the meagre attendance here. I believe a powerful means of instructing the public in an art of which, above all other fine arts, they need to learn the rudiments, is greatly crippled because we do not now, as then, exhibit in Pall-mall, and open our doors free. And let me add, were there any chance of 10,000 visitors to the Architectural Exhibition next session, there would be no such difficulty in finding exhibitors as one sometimes hears complained of.

But to return to the Association. The session of 1850-51, the next in order, was opened under the presidency of Mr. J. D. Wyatt. I find that Mr. Seddon was secretary, and at the opening meeting, in addition to the usual proceedings, Mr. Young read a report embodying the conclusions come to by the Association, after a careful study of the subject of competitions. This paper you will find, *in extenso*, in the *Builder*, for October, 1850, and those who take the trouble to examine it will, I think, find much to praise in the treatment of one of the most difficult yet important aspects of architectural business and life with which we have to deal. Good, however, as this document is, I can I fear point to no such practical result of the deliberations of this body on competition, as flowed from its deliberations on Exhibitions of Architectural Designs.

The session 1851-52 opened about the time of the closing of the first Great Exhibition; and both in that and the succeeding session, 1852-53, I find the name of Mr. J. D. Wyatt as again president. In the *Builder* for 1852 you will find a complete list of the office-bearers for this latter session. Among the names are those of Mr. James Edmeston as vice-president, Mr. C. Gray as treasurer, and Messrs. Alfred Bailey and Arthur Cates as secretaries; and at the opening of the 1852-53 session the inaugural address was delivered by Mr. Edmeston.

In 1853-54 Mr. Edmeston was president; and in the list of office-bearers I notice, for the first time, the name of Mr. Rickman, now president of our Voluntary Examination Class. In 1854-55 Mr. Rickman was president of the Association, Mr. Truefitt vice-president, and the secretaries were Messrs. Arthur Cates and T. W. Goodman. Under the presidency of Mr. Rickman we first find any active steps taken by this Association in an all-important matter in which we are deeply interested to-day.

In that year the Architectural Association decided to petition the Royal Institute of British Architects to establish architectural examinations; a subject which had already, I believe, been repeatedly mooted in this society.

At that time, however, and, indeed, up to a very recent period, the examination was supposed and believed to be inseparable from a diploma. It was hardly expected that men would come forward voluntarily to be examined, as they have actually done, without an exact and well-defined rank and an honorary title being earned by their success. This has been the greatest obstacle to the establishment of examinations, and it has only been the recent disentanglement of the two questions thus confused with one another that has rendered the establishment of them now possible.

A diploma could not now, perhaps not soon, possibly not ever, be advantageously established; but I feel sure that the undefined, yet not on that account unreal, honour obtained by those who have passed and will pass the Institute examination is not on that account the less real or the less recognized.

But, to return to our narrative; we find that at this time the idea was taking shape, and during the session I have referred to (that of 1854-55) Mr.—now Professor—Chamberlain read an able paper (reported in the *Builder*) advocating a diploma and compulsory examinations; and after this it was decided to take action.

The next session, the session of 1855-56, commenced, under the presidency of Mr. Alfred Bailey; and at the opening meeting it was announced that the Architectural Association was about to memorialize the Royal Institute of British Architects, asking them to establish "a public architectural examination and an honorary diploma." This memorial, which was duly presented shortly after, will be found in the Transactions of the Institute. It was, at least in all that related to students, thoroughly to the point, though brief; and at the present moment it possesses so much interest for us.

The President then went on to complete the review of the society's operations up to the current year, all recorded in our pages; speaking of the desire they had to increase their *lending* library, the offered premium to the Association of 25*l.* by the Society of Arts for the best design of a labourer's cottage, and of their anxiety to increase the number of members.

In conclusion the President said,—In contemplating some time ago this address, I had thought that I would not close it without a reference to the two high aims which every student of architecture ought to keep in view; aims of which he is sometimes in danger of losing sight while labouring to master the innumerable technicalities of common construction, office practice, and ordinary ornamental detail. I refer to Scientific knowledge of construction, and to Artistic excellence of the highest kind. Since then the finger of Death seems to have pointed to these two things with a solemnity that has given them double weight; and if I only can direct your attention to the characters of two great men whose recent loss we have to deplore, these characters, rightly understood, will teach the lessons we ought to learn more pointedly than any words.

I refer, of course, to Professor Cockerell and Mr. Joseph Gwilt, both of whom have lately passed away in a good old age.

Probably there is no one to whose labour students are more indebted than the late Mr. Gwilt. His "Dictionary of Architecture" ought to be on the shelves, and often in the hands, of every young architect; and the extent, the variety, the accuracy, and the orderly arrangement of the matter in that work, testify to the extensive information and high culture of its author, and furnish an example to us of how we ought to study.

In regarding Mr. Gwilt's attainments as a scientific architect, we ought specially to note, however, that since 1842, the date of the first publication of his "Dictionary," scientific construction has made a most wonderful stride, and that in judging of Mr. Gwilt's eminence we must compare him and his work with the then general standard of skill and knowledge; while in gauging the extent of the scientific skill now fairly within the scope of an architect, we must take a far wider range and higher pitch. Civil engineering, it may be said, is not our province; but I reply, that while it is not to be expected that every architect, or even the majority, will master the whole system of engineering, every one ought thoroughly to understand something more than ordinary construction; and those most fitted for the study ought to pursue it to its furthest limits. Engineers have too much ignored the artistic element in their structures, especially in great cities; and after public taste has been outraged by such exhibitions as the wire bridge at Lambeth or the girder bridge at the Brighton terminus, there is every reason to expect that a reaction will set in. What I urge then is, that if the public insist, as they will, on having the terminal stations, the viaducts, and the other features of great public works in cities executed by architects—that is, by men who study building as a fine as well as a useful art—some of us at least should be ready to respond to the call.

The highest part, however, of architecture is its art; and never has there been a man who has studied that art with more diligence, illustrated it with more refinement, and taught it with more enthusiasm, than the late lamented and revered Professor Cockerell. To students, his course of study may serve pre-eminently as a model, both from its extensive scope and the length of time which he devoted to it. For a period of about twelve or thirteen years, of which seven years were devoted to researches on the Continent, chiefly in Greece, Mr. Cockerell was engaged in fitting himself for the practice of his profession, and in this course of preparation he included the earnest study of the sister arts of painting and sculpture.

To those who have heard his lectures, and seen his drawings, the refinement of his taste, the wonderful depth and extent of his learning, and his astonishing skill with his pencil are well known. His executed works may be quoted as models of originality, elegance, and beauty.

More than anything else, however, he was conspicuous for his unquenchable ardour in the pursuit of his art *as an art;* and this it is in which I wish we could, each one of us, catch some portion of his spirit. Few of us may have the means and the opportunity of passing so long a period in study; and few, if any of us, are likely to be gifted with his rare natural qualities. Nor are his works and studies an exact model for us, whose lot has been thrown in a day when the study and practice of Greek art has given place to that of the Pointed styles,—an accident to which many of us owe predilections and prejudices which we are apt to fancy are the result of deliberate choice.

All of us can, however, in those studies which are before us, and with those means which are at our command, follow to some degree the example of this illustrious man. Let us in our youth strive to show at least a portion of that enthusiasm which lighted up his whole being after seventy summers had passed over his head; and let us in our pursuit of our profession remember that it is not merely a means of getting a living, and its practice a simple piece of business. Let us regard it, as Professor Cockerell ever did, as an art, the whole extent of which we can never hope even to know, and the greater part of which we shall never be able to master; and in that portion of the field in which it is our lot to labour, let us see to it that our works are the works of artists, not merely of handicraftsmen; and let us esteem no pains too much, and no study too severe, if the result be something not unworthy of the name of Architecture.

Professor Donaldson having been called upon, said that the address just delivered, treated upon so many subjects, and displayed so wide a field of usefulness, that one felt embarrassed to fix upon any particular point on which at a moment's notice to offer any observations. He was surprised and pleased to see how largely extended the views of the Association had been, and the measure of success that had attended their operations. They had embraced various topics floating upon the public mind, and engaging the attention of the profession, particularly that of examinations, which had been established under the auspices of the Institute of British Architects. He was happy to hear that so many young men were preparing to avail themselves of this mode of improvement and distinction. It was a matter highly creditable and honourable to them that they were preparing thus for the great contest which they would have to engage in, in after life, and that instead of idling away their time they were laying up for themselves stores of information on which to draw for future success. As a member of the Institute, he had always been anxious to promote the interests of architectural students, and had taken every opportunity that presented itself of seconding their wishes. He could also assure them that in the council the anxiety had also been to follow out that which was the desire of the younger members of the profession. The address had alluded to the steps taken by the Institute with respect to the Exhibition building, and other matters which they had had to bring before the public and before Parliament. They had stood in the very front of the battle; they felt called upon to act as vigilant soldiers, and as far as possible to direct the public taste, and to advance the public interest in matters of art, and to do so with courage and confidence. He should add that, with respect to the Exhibition building, to the exertions of Professor Kerr they were mainly indebted for the success which had attended their efforts. He had only to add in conclusion that he wished every success to the Architectural Association, and he hoped that it would go on flourishing as it had theretofore done.

Mr. Godwin being also called on by the president, said he had simply to express what he had often before evinced, his earnest desire for the prosperity of the Association. He had had the privilege of attending a great many of its meetings from its original establishment, and had always felt a pleasure in doing so. He thought it would be a public loss if by any chance—and once or twice the chance seemed likely to arise—the Association were to stop in its good work. He considered that the step they had taken in circulating a pamphlet giving an account of the laws and objects of the Association was calculated to have the good effect of greatly increasing the number of its members. At present the number, 170 or 180, was simply ridiculous. Considering the wide extension of the profession, and the large number of young men engaged in the various offices in London, 500 was about the number which they ought to work for and to insist on obtaining. The list of lectures they had been enabled to announce for the present session was gratifying in two points of view, namely, the amount of information promised, and which was sure to be obtained from them; and the good feeling which was evinced on the part of the elder members of the profession whose names appeared in the list. With respect to the prize which had been offered by the Society of Arts for the best plan for labourers' dwellings, the gentlemen who competed for it should make up their minds that it would be of no use to touch the outside of the matter. Generalities had been dealt with, so far as related to cottage building, quite enough already. They must look accurately into the best possible means of affording, for a certain sum of money, the proper cubical space for a family, and see by what arrangement or plan, by the use of what particular materials, and by what inventions as to sanitary arrangements and so forth, they could give to the agricultural labourer a healthful cottage which proprietors would be disposed to adopt for this reason, that they could obtain four or five per cent. on the cost of its erection. It was an exceedingly difficult problem, and required that those who undertook the solution of it should go thoroughly into the entire subject in all its bearings. As to the necessity for some step being taken in the matter, all who had looked into it would admit that such necessity existed. The opinion was prevalent that if people were in the country they were pretty sure of good health, whereas the truth was, that a state of things existed amongst the class alluded to which is more inimical to good feeling, to good health, to good conduct and morality than in towns. He had seen cottages in the country, in the upper room of which three entire families were sleeping—surreptitiously, it was true—and where health or decency was impossible. With respect to the drawings sent in, and for which premiums had been awarded by the Association, he had no hesitation in saying to Mr. Bayne and to Mr. Johnson, that if they did not obtain a good place in their profession it would be their own fault. He would take the liberty of expressing his opinion that in endeavouring to master the kingdom of architecture, they should not confine their attack to one section of it.

Professor Kerr was then requested to address the meeting. He said, he had been much gratified to hear the observations made by the gentlemen who had just addressed them, and who had for so long a time identified themselves with all that related to the interests of the younger members of the profession and the Association. He had also listened with much pleasure to the account given by the president as to the rise and progress of the Association. It had not, however, yet attained its twenty-first year, because the Draughtsmen's association which originally existed consisted solely of settled architectural clerks, who clubbed together to assist each other when out of employment. The object in view when starting the association was very different, and its constitution had worn well all this time. It was a matter of congratulation that the gentlemen who had addressed them that evening, Professor Donaldson and Mr. Godwin, had proved themselves the steadfast friends of the Association. It was not the first occasion that they had come to give them a "lift." They had supported it, if not through evil report, through something very like it, and through good report most unquestionably. With respect to the designs that had been sent in, they did great credit to the principle the Association had in view, and in all respects were extremely encouraging. In reference to the papers which were to be read during the session, he might be permitted to say that it was all very well to have Mr. Gilbert Scott, and other eminent members of the profession, reading papers; but they ought not to lose sight of this, that members of the Association were to hear each other read papers, and that they ought to come often, at a sacrifice of convenience, and to sit, even at a sacrifice of patience, to hear papers read by each other. If they wanted to hear Mr. Scott, they might walk upstairs, for he believed that any member of the Society would have admittance there; but they ought not to forget the principle of mutual instruction. With respect to the Exhibition building, he did not want it to be understood that he had more to do with its rejection than he ought to have had: he merely did his duty. Being present in the House of Commons during the entire of its discussion, he could bear testimony to the respect with which the Institute of British Architects was received whenever mentioned. There had been an impression that the opposition was a mere matter of personal pique, and that it would be overruled by the common-sense of Parliament, which rejects everything like pique; but the straightforward way in which the matter was brought forward at once satisfied the commonsense of the House that the policy of the Institute of British Architects was to be accepted as a policy really founded upon the very best motives. The Institute suffered nothing from that move, and he hoped that on future occasions it would be induced to take a similar lead in public architectural questions. The Association and the Institute were now affiliated in the very best manner. The principle of examination had been recognized, and they had only now to see whether the Association could by any means get into the library upstairs.

The President said,—In reference to Professor Kerr's observations on the papers to be read, they had departed somewhat from their ordinary course, and endeavoured to obtain papers from higher sources, but the step had been taken somewhat under pressure, and it was not likely to become a pattern for future sessions. He quite admitted that they ought to furnish the greatest amount of material from their own resources. They ought, however, to remember that a paper read by Mr. Scott upstairs would not be the paper read by him, even on the same subject, before the Association. In either case it would be prepared with a special regard to the audience before whom it was to be delivered.

BETHNAL GREEN: HOUSES OF THE POOR.

In connexion with the fatal cases of disease which are so common in overcrowded dwellings,—the numerous forms of death produced by impure air,—we have made some inquiries respecting the effects produced by the overcrowding and polluted air on the inhabitants of these places; and it may not be without useful results to mention some of the statements which have been made by the people themselves.

In many of those small interiors where seven, eight, nine, ten, and even more sleep, we hear complaints of a heavy drowsiness, which renders old and young stupid and weak in the morning. Children lie like dead things until they are roused

up by the opening of doors and windows. There is a general complaint that, during the night, particularly towards the morning, the bodies of the inmates are covered with a clammy, unwholesome perspiration. Some said that, in the morning, the sweat ran in streams from their faces. First, this was hot; but, on getting into the air, it changed into large cold drops, which gradually declined in quantity until the skin became intensely cold and dry. This even occurred in tolerably mild weather. The nature of the water supply prevents regular washing of the face and hands; and in these situations, in nine cases out of ten, nothing more is thought of it. We may readily judge how seriously these conditions must affect health. During some early visits recently made to East London, we found the state of some of the rooms to be shocking. The dirty bedclothes were reeking with fumes; and, although it goes sorely against our inclination to make the comparison, it is the truth to say that, in some of these places, the human tenants suggested only the idea of decomposing vegetation. In one room six children had been washed in a dish, in which there was about a quart of water; and this, by the renewed operations, instead of being a liquid, had become a semi-solid body.

In some rooms the ragged, black-looking bedcoverings had not been washed for months: one woman said that she had lived in a room for two years and had found no opportunity for washing or drying her quilt or blanket. How can we wonder, then,—when we consider these arrangements, the density of the population of the houses, and their neglected or unsanitary state,—that fevers rage and multitudes of children die?

When visiting some of these places, we feel an almost irrepressible inclination to poke a walking-stick through the dirty windows. Every endeavour is naturally made to keep warmth, and so they preserve in all its strength the poisonous atmosphere. If a square of glass have been broken the aperture is filled in with paper or in some other way; and up to eleven o'clock in the morning, although the weather, as we have said, was mild, there was scarcely a window of any of the rooms open. The pursuits of some of these poor people are curious; but we have not space just now to notice them except in one instance that struck us: this was that of an old woman of demure appearance, more respectable than those who lived about her: this lady is a "bolter hunter;" that is, she earns a livelihood by searching out the addresses of persons who, being indebted to the "tally-man," have moved away without indicating their whereabouts. For each discovery she receives about 1s.

Going to another neighbourhood for an instant, for the purpose of showing what a large percentage of profit from the rent of houses which are let to the poorer classes goes into the pocket of the middleman; we give the following particulars of a house in Clerkenwell, one of several which are managed on very nearly the same terms:—Rent paid to the landlord, taxes, and every other expense, 32*l.* per year. Received from tenants: for two kitchens, partly below the surface, 5s. per week; two parlours, 5s. per week; two rooms on first floor, 5s. 3d. per week; two garrets, 3s. per week; 18s. 3d. per week;—in all 47*l.* 9s. per annum, leaving a yearly profit to the agent of 15*l.* 9s. per annum on this single house. In connexion with these houses, we learn that it is by the rarest chance the rooms remain unlet for a few days, and the loss of rent is next to nothing. In case a week's rent is unpaid, the agent gives the parties notice to leave; and, if they cannot pay, retains some piece of property—on the rule "If you cannot pay one week's rent, you must pay two." This sounds rather sharp practice; but, we are told that it is found to work well amongst people who have a stated small income, and prevents them from falling into such arrears as might cause them to lose their furniture altogether. Our object in giving these figures is to afford another instance of the amount of rent which is actually paid for very imperfect accommodation by large numbers in the metropolis.

THE STRIKE OF THE DURHAM PITMEN.

The distressing scenes which have been recently enacted at Messrs. Straker & Love's collieries, on Lord Boyne's estate, have directed, in a very painful way, the attention of the public to the conditions of the coal-miners in the north of England—a most useful body of workmen, who, in the deep darkness, and amidst the dangers, of the pit, toil, so that our hearths may be bright, and our mills, locomotives, steam-ships, and other sources of prosperity be kept at work.

Notwithstanding the changes which have taken place in the manners of the pitmen of Northumberland and Durham during the last twenty or thirty years, they are still marked by peculiarities which cause surprise to strangers. Half a century or so ago these men were more peculiar, for then the plainest education was almost unknown amongst the thousands who were employed in the work. Their peculiarity has been in a measure caused by the intermarriages amongst the same class—very often cousin with cousin,—and associating but little with persons engaged in other pursuits. This has kept the pitmen of the North rather in the rear of the general progress. Nevertheless, these people have sterling qualities, which can be rightly appreciated only by those who are well acquainted with them. Their unflagging industry and patience in carrying out work which is most difficult of execution,—their bravery in incurring any amount of risk in endeavouring to save the lives of their fellows in the case of accident,—their kind-heartedness and honesty,—are qualities which have been somewhat overlooked by persons who have taken but a cursory glance at parts of this large community.

In order to form a correct notion of the causes which have led to these wholesale evictions of workmen and their families,—acts which are opposed to humane ideas,—it must be known how the coal-miners are generally engaged and paid. For some centuries past it has been the custom for colliery owners to engage the number of men and boys needed, for a particular term. This is sometimes one year, or more or less. The quantity of coal wrought is placed in tubs of a certain measure, and for so many of these as each man can fill, he is paid at a stated price.* In connexion with this part of the business, there are certain fines enforced; for instance, if, with the pure coal of the seam, any of the slaty substance in which it is imbedded get mixed, this is a matter for a fine in proportion to the extent; and if the measure of the tub or truck be not found complete when it is drawn to the bank, that amount of labour is confiscated in some collieries altogether. At the Messrs. Straker & Love's collieries the strictest rule seems to have been kept, and not only were the men without the means of knowing the justice of these confiscations, but overseers have been appointed by the masters to inspect the tubs when they arrived at the bank, who are paid an additional sum in proportion to the number condemned. The coalowners do not consider the difficulty of working in the narrow seam, in a height of a little over 3 feet; that in the dim light it is difficult to prevent pieces of the shale from getting amongst the coal; and not easy so to fill the tubs or trucks, that, by the shaking during its conveyance from the place of working for a long distance to the bottom of the shaft, the coal gets below the proper gauge. The pitmen say, as we think rightly, that they should have an overseer at the pit-bank, to see that they are fairly dealt with, and that, instead of by measure, the quantity of coal worked by each man should be paid for by weight.

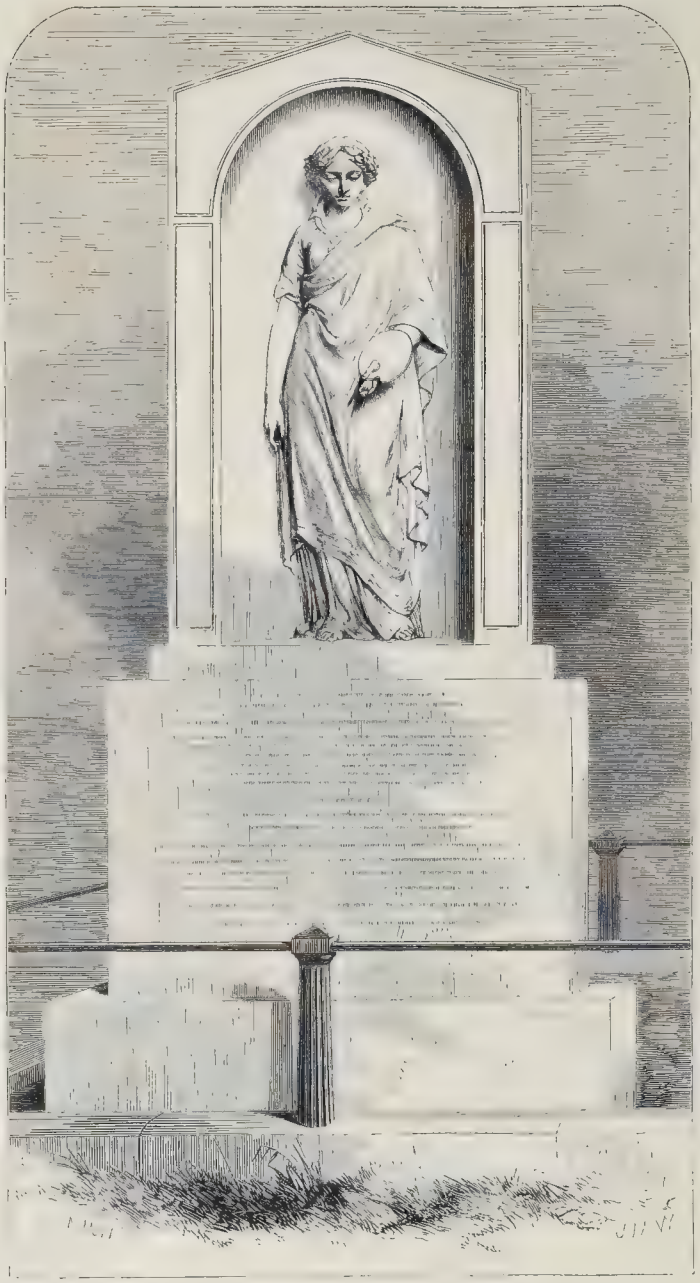
In connexion with this strike, the men have so far conducted themselves in a manner which is to their credit, having, under the most distressing circumstances, calmly obeyed the law: they have also offered to submit the dispute to arbitration, by three miners on their part belonging to one of Mr. Pearse's pits, and three viewers selected by the owners. This fair offer has, so far, been declined by the masters.

A short time since we directed attention in these pages to the dwellings of the North country miners, and remarked that the grant of a free house was one of the conditions of the binding. The late evictions show how great a power this gives to the employer. It also proves how entirely dependent the men are upon their employers for their homes: they have no choice. Surely, under these circumstances, it is a duty of the masters to provide dwellings which are fit for human habitation: those at Oakenshaw and Sunny-brow are of the worst description. We remember of other pitmen's strikes. In one which took place more than thirty years ago, thousands of people were turned out of their homes. Then great disturbances took place; attempts were made to destroy life and property; a strong military force was required to preserve order; and in the old Norman Keep the pensioners and local volunteers were kept for long on duty. The contrast between the manner in which that strike was conducted and the present is great, and shows how much progress has been made since the above time in the intelligence of the pitmen. Education has to a certain extent progressed, but there is yet much to be done. Better schools and schoolmasters are wanted, and arrangements made so that the boys might have the opportunity of attendance when they are relieved from their work. Very young boys are useful in the pits as trappers, drivers, &c; and it would be well if the age at which boys are allowed to work in the coal-mines were fixed at such a period as would allow the lads to get a fair amount of elementary education.

We trust that this unfortunate dispute will be soon settled. If the strike should extend to other neighbourhoods, it is most desirable that attempts should be made to settle the affair by arbitration before the stern step of eviction is resorted to. In connexion with this affair, too much praise cannot be given to the rector and curate of Oakenshaw, who, when the women and children were turned with their furniture upon the bleak moorland, without a shelter, opened the doors of the church, had the fire lighted, and admitted the people with their bedding within the walls of the sacred edifice, where they were protected from the howling wind and storm.

* Formerly "Corves" strong baskets of wickerwork were used for this purpose.

THE CAMBRIDGE NEW MUSEUMS AND LECTURE ROOMS.



The building intended for a dissecting-room, &c., for the department of Comparative Anatomy, which is an appendage to the eastern wing of the main block of buildings, was designed to abut on the wall of the Old Botanic Garden. It is found that this part of the design cannot be executed without inconvenience; and the Syndicate, after consulting with the architect and the Professor of Anatomy, think that the servants' room in the design might be omitted, and a detached building erected instead behind. A road-way would thus be obtained to the back of the buildings; and this would be a great advantage. Mr. Salvin has prepared a sketch of a plan by which such alteration might be effected. The contractors state that this alteration may be effected at an extra cost of 94*l.* beyond the amount of the existing contract. The Syndicate therefore recommend this plan for adoption by the Senate. Dr. Clark, the Professor of Anatomy, offers to lend to the University the sum of 2,364*l.* 14s. 3d. necessary for the completion of the Anatomical Museum, at 1½ per cent. interest, to be repaid by them in ten years. The Syndicate are of opinion that this offer should be accepted, and that steps should be taken for erecting the museum without delay. They therefore recommend that the necessary contract be prepared for the approval of the Senate.

THE TOMB OF THE LATE MR. JAMES WARD, R.A.

KENSAL GREEN CEMETERY.

Recently, a monumental head-stone has been erected to the memory of the late Mr. James Ward, R.A. It is placed in Kensal Green Cemetery, on the right-hand side of the principal approach to the chapel, just before reaching the large circle. In the course of a short time, we fear it will be hidden from the eye of the casual observer by the rapid increase of tombs around. We have called it a head-stone, but in reality it is placed at the side of an inclosed plot of ground, destined to receive three distinct families, or branches of one family. Be this as it may, it arrests the attention by its purity and simplicity. The outward form of the slab is unfortunately of a common type, devoid of any architectural feature. Upon this is rendered a slightly-coved recess: within stands, in a pensive and thoughtful attitude, the Muse of Painting, with her palette and brushes in her left hand: her head has a circlet of laurel nearly meeting in the centre over the forehead. The face is of great beauty, and the drapery is treated with much grace. The sculptor is Mr. J. H. Foley, R.A., who has done his part with his usual ability. We could have wished the masonry of the base had been more important than it is. The inscription thus sets forth the merits of the deceased artist:—

In Memory of
JAMES WARD, R.A.
Distinguished as an Engraver,
And afterwards as an Animal Painter.
His Works in the National Gallery and British Museum
Prove his great and varied Powers in each pursuit.
Died the 16th of November, 1859,
In the 92nd year of his age.
Also of
MARY,
The beloved Wife of his Son, George Raphael Ward,
Who died the 28th of February, 1860.
To the high degree of excellence in the Arts of
Painting, Music, and Poetry
She added all the Graces of an Amiable and Virtuous Life.

THE TOMB OF THE LATE MR. JAS. WARD, R.A.

MR. FOLEY, R.A. SCULPTOR.

INTERIOR OF HALIFAX TOWN HALL.

THE LATE SIR CHARLES BARRY, R.A., AND MR. E. M. BARRY, A.R.A., ARCHITECTS.

INTERIOR OF HALIFAX TOWN HALL.

In another volume we gave a view of the exterior of Halifax Town-hall, then about to be built; plan of the principal floor; and some descriptive particulars.* We now add a view of the interior of the hall, proper, a fine apartment in the Italian style. The building, it will be remembered, was designed by the late Sir C. Barry, R.A., but has been completed, under the superintendence of his son, Mr. E. M. Barry. As will be seen in the engraving, the ceiling is divided into compartments by broad moulded bands, having the laurel or oak leaf rendered upon them. In the centre of each of these compartments is a small dome for lighting the ceiling. In the spandrels, around each opening, is an enriched raised ornament, upon a coloured ground. The body of the hall is lighted by the coved portion, being all of glass, divided into bays corresponding with the bands in the ceiling. In the cornice, at each division, is a small group of figures, very well modelled. Between the pilasters below are semi-circular arches, enriched with the initials of the sovereign, and the letter H. for Halifax. The caps to the pilasters are also well moulded. The gallery, which goes round the hall, and which is fitted with seats, has a balustrade, in carton pierre, from the designs of Messrs. James Mabey & Sons, of Westminster, who executed all the bas reliefs and caps, under the immediate supervision of the architect. Under the gallery are lunettes, containing the arms of different towns, supported by figures, of Commerce, Industry, &c., in bold relief. At the foot of the pilasters, beneath the gallery, are pedestals for the reception of statues. The room is 50 feet long, 40 feet wide, and about 40 feet in height. The floor is of Minton's encaustic tiles, in a simple pattern. We should have mentioned that the balustrade to the gallery is gilded.

The accounts of the building have just been presented to the committee, and show that the cost of the building as certified by the architect, is 32,000*l.*

THE LATE THOMAS VIGNOLES CROUDACE, C.E.

Railways abroad, on which English science and skill have been employed, have cost us many valuable lives, the last the young engineer whose name unhappily heads this notice. He will be remembered by some of our readers in connexion with the fine model of the Tudela and Bilbao Railway exhibited in 1862 by his grandfather, Mr. C. Vignoles, F.R.S., the engineer in chief. Thomas Croudace was assistant engineer, and, having returned to Bilbao, was carried off a few days ago by typhus. In Spain, benighted land, a Protestant minister is not even allowed a residence or chapel; but it happened that Dr. Bayley, of the "New Church," was in Bilbao, paying a visit, and therefore willingly accepted the office of reading the burial service over his remains. All the foreign consuls, the English and French residents, and numbers of Spaniards, even, joined in the procession, and in the only Protestant cemetery in Spain (which he himself had planned, drained, and put in order), his earthly remains were placed amidst the heartfelt mourning of even strangers in a foreign land, who all loved and respected him.

As one amongst a dozen writes of him to his relatives,—"He was a true gentleman in feeling; so considerate that, while delicate and spotless in his own conduct, he yet would never point at or speak of the faults of others, or even of their indiscretions."

This is the second son lost under precisely similar circumstances, for whom Mrs. Croudace, herself not unknown in the arts, has to grieve.

ARCHITECTURAL CURIOSITIES IN SOUTH BUCKINGHAMSHIRE.

The district of South Bucks, if undistinguished by many-towered minsters or crumbling castles, has attractive features for the architectural student. Centrally in it stands the old borough of Wycombe, dating from the time of Constantine as to its Roman remains, and as to its known internal history from the time of the birth of Egbert, king of the West Saxons, containing buildings well worth careful examination, and easily accessible, being within an hour and a half of the metropolis.

The collegiate church of All Hallows, of the thirteenth century, is the largest and finest structure in the county, originally cruciform in plan, with a central tower. We shall see here the curious manner in which the Perpendicular builders went to work to adapt the building to their tastes. The fashion in parochial churches of the fifteenth century appears to have comprised the most complete avoidance of the cruciform plan, going even so far as to omit transverse internal walls altogether, as at Collumpton, in Devonshire, and Battlefield, in Salop. As Wycombe Church stood at the end of the fourteenth century, with its broad choir and north (Vicar's) aisle, central lantern, short transepts, and external inclosing walls to nave and aisles, it certainly disagreed most distantly from the type which the builders of the fifteenth century appear to have taken for their model. Had the traders of the fourteenth century been as rich as their successors, we might have had a finer building than now remains to us. But the fifteenth century was the golden age of trading, "wevyng, ffullyng, and dyyng," in Wycombe, and brought forth rich traders, who devoted to the work of the sanctuary the goods they had thus honourably gained.

The nave was first completed, with a two-light clerestory and roof. This part of the work differs from most Perpendicular work, in being unusually solid and grave, so much so as to deceive many at the first glance as to its date. The roof was well coloured, the mouldings having alternating spiral ribands. The spandrels of the bracea are filled with trefoil panelling. The nave I believe to have been completed before any of the undermentioned alterations, and the aisles roofed in. The corbels terminating the drip-moulding of the easternmost arches face diagonally, proving those arches to have originally abutted against the western wall of the tower.

The next work appears to have been the rebuilding of the choir, with the addition of the Bower chapel on the south side. The choir, as I have recently discovered by careful measurement, is deflected northwards in the well-known manner, supposed to denote the drooping of the head on the cross. The position of the arch opening from the Vicar's aisle into the north transept not being central, induces me to think that aisle has been widened, to the narrowing of the choir; and this is confirmed by the abutments of the choir arches on the chancel wall falling within the abutments of the transept arches. Further, the last pre-Reformational inventory of church goods, dated 1518, shows that there were then six altars in the church; namely, the high altar, St. Clement's altar, St. Nicholas's altar, Name of Jesus altar, the Bowre altar, and the Resurrection altar. Now the high altar and the Bower altar had their assigned places in the choir and Bower aisle; but the others, which had all been introduced into the church within the previous fifty years, must have been placed in some appropriate spot, and the vicar's aisle may have been widened for their accommodation. This alteration of the choir shows how wonderfully the old builders adapted their work to its uses,—the aisle widened for a useful purpose, and the choir rendered not a whit less stately; for the impression of height is thus rather increased, and the building itself made more convenient for the performance of choral service.

Next came the alteration of the crossing. The central tower, with its supporting piers and arches, as well as the western arches of the transepts, were all removed, and the nave and transepts assimilated to the type of the non-cruciform church. This seems to have been the crotchet of the new architect, who thought this type better suited than the old for parochial purposes. Judging from what remains of the work of the thirteenth century, the tower would not have been taken down from necessity, for the older masonry, generally, is as good as the day it was first bedded. Still it seems unlikely so large a tower would have been removed out of caprice. Be this as it may, a new tower was built at the west end, and completed with much rejoicing,—"ryngyng of bellys and pypyng of organs,"—in 1522. The work of the new crossing, including the piers and arches of the transepts and choir, the north, east, and south clerestory windows, and the roof, is inferior, and both poor and clumsy in detail. The scantlings of the timbers are scanty compared with the nave roof; the panelling is poorly imitative of the other; and the tracery in the pedimental part totally wanting. The details of the windows differ materially; the corbels are rude and uncarved; and, finally, two ominous cracks, the result of the settlement of the new work, point out clearly its junction with, or rather disjunction from, the old.

Now let us see how the non-cruciform idea was carried out. The transept arches, both as to their apex and springing, are kept as low as was consistent with constructive safety; but, after all, the idea of the old mason of the thirteenth century predominated, and the arches would not be kept low enough to make continuous roofs over the aisles and transepts; so the roofs of the latter were of necessity made transeptal to cover the apices of the arches. The entrance to the original roodloft, on the west side of the tower, is still observable, disguised as a window, and must have been entered from a staircase in the south-west angle of the transept.

The removal of the western transept walls brings us to the curious features in the north aisle, lately discovered. They consist of an ordinary monumental drop-arch recess, where formerly lay a stone coffin. The coffin was broken up, and the arch bricked up by the church bricklayer in 1822. Thanks to that worthy, however, the mouldings were carefully filled in with mortar, whose removal disclosed them in their pristine sharpness. The back of the recess was plastered, and retained fragments of colouring. Thus far all is intelligible and satisfactory.

But, in cutting away the plaster from the jamb, a large piece came off, and disclosed more moulding eastwards. On clearing this out, we found part of another recess, also plastered at the back; but the arch had been cut, and the rest filled in with solid masonry, apparently for the accommodation of a third feature, whose jamb, which we at first imagined to be a fragment built in at random, and arch were next uncovered. This was soon traced out, and proved to be only a semi-arch, the apex having a *vertical* joint, and abutting against a mass of ashlar chalk, with which the angle had evidently been rebuilt on the removal of the pier which carried the western arch of the transept, a necessary consequence of taking down the western arch of the crossing. The foundation of this pier we discovered by digging below the pew floor. The last-mentioned semi-niche is, like the others, plastered at the back, but extends no further eastward: what would be the remainder of the niche being the ordinary rubble core of the pier, thus proving the niche to have been originally only a semi-arch. Moreover, the western faces of the two stones retain black distemper design on a yellow ground, showing the masonry in the fifteenth century to have presented pretty much the same appearance as we now behold. This little bit of evidence was nearly lost to us, the builder proposing to cut the projecting blocks flush, so as to show the niche the better.

Now, the most singular fact is, that the mouldings of the three arches are identical in section, so that the alterations must have gone on one after the other, very little time intervening. The string course even, bounding the window sills, intrudes strangely on the jamb of the semi-niche.

The piers of the new crossing are exceedingly slim, being scarcely more bulky than those of the nave. The masonry above shows sundry cracks, vertical and diagonal, external and internal, which are readily accounted for by the facts, firstly, that the thrust of the great arches is not received by the choir arches, which abut within them, on account of the narrowness of the choir; and secondly, that in the vicar's aisle, a hot-air apparatus having been contrived, the actual stability of the transverse wall was so little regarded, that a chimney was excavated out of the solid wall not far from where the transept arch abuts on it.

The Bower aisle follows the deflection of the choir; for in the western bracing of the roof, the springing of the north brace is half imbedded in the west wall, while that of the south brace is an inch or two distant from it. The octagonal oak standards, two of which stand at the entrance of the Bower aisle, and two at the entrance of the choir, are unique in this part of the county. They retain traces of their original painting and gilding, as did the rood-screen now removed. Of the seven bays of oak screen work, which until 1858 occupied their original position in the choir and transepts, one only is standing, and this, alas! is condemned. The old choir stalls, with their return ends and carved finials, were also removed, and are about to be replaced by modern pewing. These, as well as the screens, are, equally with the rest of the church, the legacy of our forefathers, and their removal is the removal of an integral part of the design of the building.

The last of the old screens separates the Bower aisle from the south transept, and has this inscrip-

* Vol. xviii. p. 39.

tion in oaken letters:—Pray ye for the soulys of Rychard Redehode, Agnes hys wyfe, ther son Willm & Johan hys wyfe, the whyche *Willm bilded thys* pelos wythe *tymbre the* yere of our Lord God mcccclxiii, *for* our soulis god.

The italics show what seems to me the most probable restoration of the lost parts.

Now let us see what the present generation may learn from these facts. May we not perceive that with the advance of architectural civilization and of congregational worship, people found that the cruciform type, how grand soever and how suitable soever to the monk-built minster, was but ill-adapted for a body of simple folk to hear, see, and understand? and that the better form of the parochial church is that of Battlefield and Collumpton?

We have not remarked all the curiosities of the church. Two portions of altar slabs were turned up out of the pavement for the meeting of the society. One retains a cross incised; the other has been intentionally defaced.* The fine arcaded and groined south porch has a parvise above, which has lately been opened, having been bricked up these thirty years. It has evidently been systematically converted by some ornithological vicar into a dovecote, the internal walls, especially the northern, being regularly pierced with square recesses, the cills being much claw-worn. What is singular is that it never seems to have been entered otherwise than by a ladder from the church, through a doorway in the north wall. There are scribblings and masons' marks on the jamb of this doorway: in particular "Rychard Upton," in finely-drawn letters of the fifteenth century. Of these scribblings and marks a better account must be given at a future time.

We must not forget the doorways in the north wall, leading to the old revestry, with sextry over. Their hinge-hooks and boltholes remain, shutting inside the apartments; and a square-topped squint, with deep internal splay, to which the hooks of the original shutter-hinges remain. This squint afforded a view of the church to the sacristan. The lower doorway shows how the level of the church was altered in Perpendicular times.

The tall arch of the old west window, despoiled of mullions, shows well over the obtuse tower arch. The settlements in the tower show the defective character of fine jointed masonry. The tower is built of bad Headington stone. The mullions of the new western window show the effect of the depressing of the arch by the great superincumbent weight.

The church is decorated in distemper throughout, at least wherever the whitewash has been partially removed. The decorations in the chancel are principally of the time of Edward VI., showing texts of Scripture in the old black letter, with red capitals. The Bower Chapel, in particular, has texts from Ecclesiasticus, surmounted by a canopy on pillars of Renaissance design, drawn in thin black lines on a white ground, on each side of the five-light east window, and a band of lettering (much mutilated) runs under the south windows. The west wall has a long inscription, but without the canopy. The vicar's aisle has similar decorations, as well as some unintelligible painting in real fresco. In this aisle even the beautiful masonry of the windows is covered with old plaster, finished with a coat of red; certainly of great antiquity, if not of the original date of the building.

The earlier decorations in the choir and chapels have been obliterated, and those above mentioned substituted; but the nave retains traces in the two eastern bays of the clerestory, in the north transept and aisle, on the east wall of the south transept, and in the south aisle, of what appears to have been the original decorations, much mutilated, and finally whitewashed.

Returning to the Redehode screen, we may remark that the Redehode family are intimately connected with the history of Wycombe in the latter end of the fifteenth century. William was a rich salter of London, having his country seat in Paul's row, "ayenst the west ende of the chirche of Wycombe." He was also a great benefactor to the fraternity of St. Mary, and masses were agreed to be sung in the chapel of St. Mary for him and his friends. He repaired, at a cost of 14*l.*, a house left by Henry Coleshill to the borough authorities, and fitted it up as two chambers (*duas cameras cum gardinis*), with gardens attached, for the residence of "*Oure Lady Preist and le boure Preist*," in 1475. The deed of covenants for masses, dated 1475, contains a proviso for the delivery at his decease, to the "*keperis of oure lady auter*" "*a chalys part gylt with this scripture on the fote*, Orate p. aiabus Rici Redehode Agn uxis ejus Willj Redehode & Johe uxis ejus, *weying X unces and more of troye wyght*," wherewith the priest was to sing on the "werke dayes." This chalice occurs in two inventories of the goods of the fraternity shortly after this date, so that he did not live long after the date of the deed.*

The inventories of the goods of the fraternity of St. Mary, of whose chapel (in St. Mary-street) not a vestige remains, exhibit many remarkable features: besides vestments, banners, altarcloths, curtains, and candelsticks (II. *latyn candilstyks apon the awter for priketts*, besides two *grete* ones, in the choir), "*a crowne of silver apon our ladyes hede and gylde; a brode gyrdyll whyte corse the pendant and the bokull dobyll gylde wt.* vi. *stodis*;" another with eight studs; beads, rings, "ameled" (enamelled) and otherwise, stones, "*gaudes*," "*An owche of silver and gylte bokulsyse*," &c. But these, with the church inventories, must form subject matter for a second paper.

EDWARD J. PAYNE.

* An encaustic tile in the nave displays a fool's head in a cap, in a circle surrounded by the legend, ME FECIT RICARDUS. A similar tile was shown to me by the Rev. W. H. Kelke, as having been taken from Drayton Beauchamp Church, Bucks; and another is or was to be seen at Little Marlow Priory. Are any more of this type known to exist?

* In perusing the accounts of Thame Church, Oxon, I found the following entries:—

1449. Halso we res. of Wylyam Redhod of Wykombe as for ys fadyrys bequyst, 3s. 4d.

1495. Item: rec: ex legac: Willi: Redewod de Wycombe, 1s. 8d.

THE PRINCE CONSORT MEMORIAL FUND.

On the 30th ult. a meeting of the general committee appointed at the public meeting held in January, 1862, to erect a national memorial of his late Royal Highness the Prince Consort, was held at the Mansion House, with a view to the disposal of the fund, so far as they were concerned, in accordance with the commands of her Majesty, communicated by Sir C. Phipps. The Lord Mayor acted as chairman, and there were also present Sir C. W. Dilke, Mr. Tite, M.P., Mr. Gregson, M.P., Alderman Wilson, Mr. Bodkin, Assistant-Judge, Mr. Henry Spicer, Mr. Charles Hill, Mr. Winckworth, Mr. Godwin, Mr. R. N. Fowler, Mr. H. Ghinn, Deputy Obbard, Mr. S. P. Low, Mr. Hartridge, Mr. A. Croll, Mr. Goodman, the Rev. Michael Gibbs, Vicar of Christ Church, Newgate-street, and Mr. Samuel Brown.

The letter from Sir C. Phipps said:—

"Her Majesty has appointed an Executive Committee, through whom it is her Majesty's intention to communicate her own personal directions for the carrying out and execution of the national memorial to her beloved husband, the Prince Consort; and the Queen has also named trustees (Viscount Torrington, Sir Alexander Spearman, with yourself and myself) into whose hands it is her Majesty's desire that all sums collected, either by public subscription or vote of Parliament, should be paid; and who will hold the funds, subject to the orders of her Majesty, conveyed through the Executive Committee.

I am therefore directed to request that you will move the trustees of the Mansion-house Subscription for the National Memorial to cause the sums at present standing, or invested in their names, to be transferred at the Bank of England to the account of the trustees appointed by her Majesty, to whose account the sum voted by Parliament has already been placed by the Government.

C. B. PHIPPS."

A report from the working committee having been read, it was resolved that "her Majesty the Queen having intimated her pleasure that the amount now invested in the funds be transferred to the trustees appointed by her Majesty, and to whom the money voted by Parliament had already been paid, the trustees of the fund be authorized to transfer the sum so invested, in accordance with the Queen's commands."

The committee continues in existence.

PROPOSED EXHIBITION OF STAINED GLASS AT THE SOUTH KENSINGTON MUSEUM.

The executive committee have issued a notice to artists in glass painting, wherein they say that, following the practice of the managing committees of other exhibitions, they—

"Start with the assumption that the exhibition is designed rather to raise the standard of the art of glass-painting in this country, than for the lower object of being a mere advertisement for commercial purposes; that, while a fair allowance must be made for the latter object, the former should prevail as the more honourable and efficient means of perfecting this branch of art, and of educating public taste.

Acting on these principles under the restrictions imposed by limited space to be divided among many exhibitors, your committee consider that, in the collection and arrangement of works sent for exhibition, it is your desire that they should be guided by the precedents of other art exhibitions. In the exercise of their difficult and delicate duty it will be one great object of your committee to provide that every contributor may, if possible, be provided with some space in the exhibition; but artistic merit must evidently decide the amount of space and the position to be allotted to the works sent in. Such appears to be the universal rule of other exhibitions.

The committee and the authorities of the South Kensington Museum desire to urge on all artists in glass the importance of the opportunity thus offered to them, and the necessity of exertion in the production of works of high character, pre-eminently for these three purposes, viz.:—1st. To vindicate the excellence of this branch of English art in comparison with that of foreign countries; 2nd, To raise the public appreciation of art in glass, from the commercial association too commonly entertained of works produced at so much per foot, to the higher ideal of an independent art, producing works to be valued by their individual merits; and, 3rd, to show the applicability of painted glass in cases not commonly considered, whether for ornamentation combined with economy, or for large and more important objects."

The committee suggest that, as works of coloured glass for inlaying floors and walls, or mosaics, will not interfere with the window spaces for transparent glass, the introduction of works of that character would add to the interest and use of the exhibition, and should, therefore, be admitted; and that the exhibition of pot metals, or materials for mosaics, might also be considered.

DINNER FOR THE BUILDERS' BENEVOLENT INSTITUTION.

The Sixteenth Anniversary Festival of this Institution was celebrated on the 29th ult., at the London Tavern, Bishopsgate-street. There was a numerous attendance of subscribers and friends to the charity, and Mr. Alderman James C. Lawrence (President of the Institution) occupied the chair.

Among the gentlemen present we observed,—Messrs. Edwin Lawrence, W. Lee, M.P., H. Lee, G. Lee, C. Lucas, T. Lucas, J. Myers, G. Spencer Smith, H. Spencer Smith, G. Godwin, Freeman, W. Higgs, G. Corderoy, H. Jarvis, W. Hudson, J. Bird, T. Cozens, W. Hutchons, G. Head, J. R. Head, S. H. Head, S. L. Mann, M. Hall, W. Stirling, F. Stirling, A. A. Robinson, P. Anley, R. Thomas, J. Hibberd, John Thorn, D. Nicholson, J. Morris, W. Nicholson, Branson & Murray, of Birmingham, Hardwick, from same place, &c.

The Chairman, in proposing the first toast, "The Health of the Queen," said he felt he was expressing the opinion of every one present in saying that, now the time of mourning has passed, it is the earnest desire that her Majesty will appear publicly in the same manner as she had hitherto been accustomed to do.

The Chairman next proposed "The Health of H.R.H. Albert Edward Prince of Wales, Princess of Wales, and the rest of the Royal Family," and in doing so alluded to the gratification which his Royal Highness must have felt at the hearty reception of his Princess by the people of this country, who were prepared at once to welcome her to their home and hearts.

To the toast of "The Army and Navy, and the Volunteers," Major Saunders responded with vigour on behalf of the Volunteers. He said, as the Army and Navy had always done their duty, so would the Volunteers, in protecting England, their country. Their determination was to work hard and well, and to give back that which they had received from the country of their birth, and leave it as they had found it—the first among the nations.

The Chairman said, he had now to propose that which was properly the toast of the evening. They were met that night to promote the interests of an Institution which called for their deepest sympathy; and there were many then in that room who well knew the vicissitudes to which the building trade was subjected, and for the purpose of relief of those vicissitudes they were then assembled to aid those who had fallen from a high position, which they had once occupied. He was informed at a previous meeting, that there was one pensioner on the books who was in as high a position as any in that room; who had executed work to the extent of hundreds of thousands of pounds; but unhappily, during a short period of time,—little more than fifteen years,—a change had come over his fortune and circumstances; and he was then receiving the benefits of this Institution. This was enough to excite the sympathy of every member of the trade; and if examination were made into other cases, it would show that the building trade was subject to such vicissitudes, and, therefore, the support of the Institution was highly necessary. Since the formation of the Society there had been no less than seventy pensioners on its funds. Thirty-seven, however, had since died. It was a source of satis-

faction to all those who have taken part with this useful Society to be able to say that they had relieved and soothed the declining years of the aged. There were now thirty-three pensioners on the books of this Institution, and others waiting for election. How necessary was it, then, that they should do all they could to increase the resources. He felt that the Institution and the good which it effected were not sufficiently known; for, if it were better known, the annual subscriptions, which were of great value, would be increased, and there would be many who would give a small subscription rather than none at all; and, further, many members would be able to bring friends with them to the annual festival, when a large increase of funds would be the result. He, however, could but congratulate the friends of the Institution upon its slow but steady progress. He had just been informed that five friends from Birmingham were present that evening, one of whom was president of the Birmingham trade. That showed that the Institution was becoming known to the residents out of the metropolis, which had a hopeful signification. He concluded by giving "Prosperity to the Builders' Benevolent Institution."

Mr. Henry Lee proposed the next toast, "The Chairman and President," and passed a high eulogium on the kind and charitable disposition of Alderman James C. Lawrence in connexion with institutions similar to the Builders' Benevolent Institution and those of the City of London.

The Chairman, in giving the toast, "The Patrons of the Institution," alluded to their late friend Mr. Wm. Cubitt, M.P., who was a warm supporter of the Institution. As a builder in this metropolis his connexions were well known; and beyond his adherence to the Institution, he had given that which was of more value, the benefit of his long experience. With the toast he would associate the name of Mr. Joseph Bird.

Mr. Joseph Bird said he had much pleasure in having the opportunity of referring to their late much esteemed friend Mr. Wm. Cubitt, who had exerted himself in no small degree in placing their Institution in its then position. His demise would be regretted by many charitable institutions with which he was connected; but his name would never be forgotten. There was also another gentlemen, now present, to whom some praise was due, and of whose exertions they might not then have met together. He referred to Mr. Thomas Cozens, the founder of the Institution.

Mr. Cozens acknowledged the compliment, and stated that his feeble efforts to found the much required desideratum would have been useless had he not been ably assisted. He referred to the absence of Mr. Geo. Pluckett (their treasurer), whose attendance was prevented by the so recent death of the lamented Mr. Cubitt. The treasurer's health was proposed, and unanimously responded to.

"The Brighton Branch of the Institution, the Chairman, Directors, and Honorary Secretary," was next given and duly responded to.

"The Architects and Surveyors" was the toast next given, and was responded to on their behalf by Mr. Henry Jarvis.

"The Directors and Stewards" having also been given,

The Chairman again referred to the presence of the gentlemen from Birmingham, and trusted that in future years they might have the pleasure of again meeting them on an occasion similar to the present.

In response, it was stated that they were not instructed to make any statement; but the meeting might be assured that the Builders' Benevolent Institution would always receive their kindest sympathy and support.

Mr. A. G. Harris, the secretary, having announced the amount of the evening's subscription to be nearly 450*l.*, the evening was soon afterwards brought successfully to a close.

The subscription list included the following:—

The Chairman, 21*l.*; Mr. E. Lawrence, 5*l.* 5*s.*; Mr. H. Lee, 21*l.*: Messrs. Lee, Son, & Smith, 10*l.* 10*l.*; Mr. R. Thomas, 50*l.*; Mr. G. Myers, 5*l.* 5*s.*; Mr. M. W. Higgs, 5*l.* 10*s.*; Messrs. W. Cubitt & Co., 10*l.* 10*s.*; Mr. Henry Jarvis, 5*l.* 5*s.*; Mr. W. J. Freeman, 10*l.* 10*l.*; Messrs. J. & W. White, Bros., 10*l.* 10*s.*; Mr. G. Jennings, 10*l.* 10*l.*; Mr. W. Hudson, 5*l.* 5*s.*. Mr. H. Spencer Smith, 5*l.* 5*s.*; Mr. Thos. Allason, 5*l.* 5*s.*; Mr. R. K. Burstall, 5*l.* 5*s.*; Mr. J. R. Roberts, 5*l.* 5*s.*; Mrs. Joseph Bird, 5*l.* 5*s.*; Mr. R. L. Curtis, sen., 5*l.* 5*s.*; Mr. W. H. Cullingford, ann., 5*l.* 5*l.*; Mr. E. F. Auley, 5*l.* 5*s.*; Messrs. Thorn, Bros., 5*l.* 5*s.*; Mr. John Harvey, 5*l.* 5*s.*; Major Saunders, 5*l.* 5*s.*; Messrs. Grove, Bros., 5*l.* 5*s.*; Mr. J. S. Lee, 5*l.* 5*s.*; Mr. Charles Mack, 5*l.* 5*s.*; Messrs. Branson & Murray, of Birmingham, ann., 10*l.* 10*s.*; Mr. S. Trickett, 5*l.* 5*s.*; Mr. John Buttley, 5*l.* 5*s.*; Mr. Thos. Ferguson, 10*l.* 10*s.*

NEWS FROM SCOTLAND.

Edinburgh.—The new offices for the Scottish Provident Institution are now near completion. The site is not far from the present offices, in St. Andrew's-square. Messrs. Peddie & Kinnear are the architects. The new building is complete externally. The interior is also well advanced, the plaster work being nearly finished, and the wood fittings all in a state of readiness. The building consists of three stories, rising to the height of 54 feet, and will have a frontage of 76 feet. The style belongs to the Italian, and is somewhat after the type of the Farnese Palace at Rome. There are four flats, one of which is a bank floor for the house officer and stores, and the other three are above the level. The street floor, and the floor above are appropriated to the public business of the office, and are lofty and well-lighted flats. The upper flat is formed into a large dwelling-house, entering from a stair in the adjoining tenement, also belonging to the Institution. The door leads into a corridor which conducts the passenger directly through the front of the building, as seen from the street, into the public office of the Institution, the greater part of which forms an outside building on the area behind. The corridor is 11 feet wide by 40 feet in length. The pavement of the corridor is to be of black and white marble, which, according to our authority, the *Scotsman*, is not half so costly as good granite. The public room is an apartment of about 50 feet by 30 feet, and about 30 feet in height. It is divided by two ranges of double porphyry columns, of the Corinthian order, into three portions, the one at the entrance and the one at the opposite end being each 17 feet in height, and the centre portion about 29 feet square, rising by a bold cove from the entablature of the columns to the height of 30 feet. This spacious centre compartment is for the clerks, who are to transact the business of the office across a table, as in the telling-rooms of banks. This part of the interior is lighted by a glass dome, but has also ornamental windows of obscured glass on three sides. These windows are divided into three,—the central light being circular-headed, the others narrower and shorter, being supported from the central one by fluted Ionic columns. The flooring of this apartment will be of oak and ebony, or other dark-coloured wood. The cost of the whole building, including the alterations on the tenement to the west, will come to between 10,000*l.* and 11,000*l.* The contractors are Mr. David Rae, mason; Mr. J. R. Swan, wright; Mr. J. Steele (Glasgow), plasterer; Mr. T. Graham, slater, and Mr. R. Kemp, plumber. The clerk of works is Mr. Stalker.

Laurieston.—The Reformed Presbyterian Church at Laurieston has been opened for public worship. The church is built in the southern division of the village. It presents no architectural features in design. It is seated for about 500, and contains a small vestry. The plans were prepared by Mr. Binnie, Glasgow, and the building in its entirety was executed by a Glasgow firm.

Aberdeen.—The new grammar school at Aberdeen, erected in Skene-street West, has been formally opened. The edifice has been built by public subscription, on a scheme set on foot some years ago by Sir Alexander Anderson. Its cost will be about 12,000*l.*, while the cost of the site is 3,000*l.*,—15,000*l.* in all. It is in the Scottish Baronial style of architecture. It consists of a centre and side wings, and the height is two stories. The length in front across the main part is 146 feet; and, taking in the back wings, the extreme length is 231 feet. The extreme breadth from front to back is 111 feet. The public school occupies the centre of the building. The chief entrance is by a circular projection in the centre, corbelled out to the square near the top, and finished by a crowstepped gable and ornamental finial. A small round tower is carried up in the angle, and in it is the stair leading to the organ-gallery, if we may so call it, in the public school. At the junction of the wings at either end the entrances for the scholars are formed into towers. That at the west side turns into a circular tower, terminated with an ornamental cornice and balustrade. The top of this tower is flat, and to be used for astronomical observations. It is reached from the mathematical class-room by a circular stair, in a small corbelled turret, carried above the main tower, and finished with an ogee roof and finial. The observatory is 60 feet in height. The principal tower, at the east end, is intended for a clock. It is continued square to the top, having a corbelled cornice and embattled parapet, and finished with a lofty circular turret. The height from the base to the top of the finial of the principal tower is 110 feet. The contractors for the building were,—Mason's work, Mr. A. Mitchell; carpenter's work, Mr. Garvie; plasterer's work, Mr. Mearns; plumbers' and gasfitters' work, Messrs. H. Gordon & Co.; slater's work, Mr. G. Davidson. At the entrance to the grounds, which are not yet laid out, a neat porter's lodge has been erected. The entire cost for the buildings, including everything, will be about 12,000*l.*, and for the ground, 3,000*l.*; total, about 15,000*l.*

Aviemore.—The new bridge across the Spey is to be commenced early next spring. The materials will be all prepared before that time, so that once it is commenced it will soon be put up. The new inn, which is to be built here, is also to be commenced on an early day.

Hawick.—The contractor for the building of the exchange (Mr. Laidlaw) has commenced operations, by laying the foundations for supporting the arch over the river. For a good way up the east side of the building is ready for the centres. At the Towerdyke side, where the new dam has to be cut for Mr. Elliott's mill, the contractor, Mr. Turnbull, is also proceeding with his contract. The operations here have brought to light an old roadway 3 feet below the present surface of the road, and paved from one end of the Towerdyke side to the other. The workmen have also come upon the foundation of a wall 5 feet thick, of remarkably solid masonry, and supposed to have been the outer work of the tower, the wall defending which extended a good way further to the west than the one at present.——The British Linen Banking Company, of Edinburgh, are about to erect a new branch establishment here from a design by Mr. Cousin, the city architect of Edinburgh. The building is to be erected on a new site in High-street. It will include a dwelling-house for the agent. It will partake of the character of Roman architecture. The street floor has two ornamental doors, one at each side, adorned with panelled pilasters, surmounted by semicircular arches, with an architrave above. The panels of the pilasters are filled in with scroll work; and in the angles, between the semicircular arches and the square architraves, there is also scroll-work. Three windows, forming an ornamental arcade, occupy the space between the two doors; and between the windows are piers, adorned by columns of the Composite order. These windows are semicircular at top, with heavy archivolts and carved consoles. Above the windows there is a cornice, and over the ground floor, and on the same level as the first floor, is a heavy ornamental stone balustrade, the front of which is filled with a stone railing. There are five windows, in the second floor, all square-headed, with architraves and half-pilasters. Over all the windows will be a cornice, broken over the windows and returned on an ornamental belt. In the upper or third floor there are also five windows. The building is to be finished with a complete Corinthian entablature, with rolls leading up to an ornamental cope. The telling-room will be 27 feet long by 22 feet wide: it will be furnished with an ornamental coved ceiling above, and round the sides, will be lined with wainscot panelling. Three windows in front will supply light. The cost of the building is expected to be between 4,000*l.* and 5,000*l.* Messrs. Marshall & Ballantyne, Hawick, are to be the masons: W. Raffin, Edinburgh, has the joiner work; Mr. James Steel, Glasgow, the plaster work; and Mr. Murray, Hawick, the plumber work.

Selkirk.—A similar building is to be erected here for the British Linen Bank. The cost will be somewhere between 2,000*l.* and 2,500*l.* The contractors are,—Mr. Geo. Inglis, Selkirk, for the mason's work; Mr. W. Deans, Selkirk, for the wright's work; Mr. Jas. Steel, Glasgow, for the plasterer's work; and Mr. Kemp, Edinburgh, for the plumber's work.

North Berwick.—The three apse windows of St. Baldric's Episcopal church, which is of recent erection and Norman in style, have been filled up with stained glass, the details of which are in accordance with the style of the building. These contain representations of the Virgin and Child, Christ on the Cross, and the Ascension of Christ. The subjects are surmounted and supported with straight bands, on which appropriate texts are inscribed: while the monograms and emblems of the three persons in the Trinity are introduced in circles over and under the inscription. The whole of the ornamental portions consist of Norman foliage and borderings. These windows are the gift of the Right Hon. R. C. Hamilton Nesbit, and have been executed by Messrs. Ballantine & Son, of Edinburgh.

CHURCH-BUILDING NEWS.

Bethnal Green.—The foundation-stone of St. Paul's Church, to be built in one of the poorest districts of Bethnal Green, has been laid. The church occupies a corner site bounded on the north by Virginia-row, and on the east by Princes-place. It will consist of nave, with north and south aisle, chancel, with aisles for organ-chamber and singers, and a tower and slated spire at the north-east corner, in which will be the vestry. The style of the church is Gothic, of the flowing Middle Pointed period; and it will be built of brick with Hollington stone dressings. Externally, the bricks will be malms, with red brick plinth, finished with a blue brick band and splayed course, in cement; and above the plinth with red and blue brick and malms, arranged in bands, &c.; a double triangle

in a circle being worked on the north face of the tower in the second stage. Internally the building will be faced with white Suffolk bricks, relieved with blue and red, in bands and ornamental devices, the arches being in similar bricks. The whole of the roofs will be covered with blue and red Bangor counter slates, in bands. The ridges are finished with ornamental cress tiles, in cement; and the apex of tower and gables will be surmounted with stone and iron crosses. The principal entrance will be at the west end of north aisle, through a porch having shafts, carved capitals, and archivolt; and a secondary entrance will be at the east, between the tower and the north aisle. A third entrance will be provided in the south aisle for the children communicating with the school-yard. The total length of the church is 83 feet, and the width 61 feet 6 inches. The committee have purchased other land at the west end for future extension, when the length will be 118 feet. The aisles will be lighted by three-light windows, with traceried heads; and the east and west windows will be of four lights, with elaborate tracery. Three small single-light windows are provided for the west end, under the principal window and beneath the small west gallery, which will be a temporary erection (until the extension) for the children. The windows to singers' gallery will be of two lights each. The roof will be open timbered, with curved braces and struts, and boarded to show the rafters. The height to ridge is upwards of 50 feet. The whole of the benches will be open, low, and with cut and moulded bench-ends. Ventilators are provided in the roof, over arcade walls, and are so designed as to make an ornamental feature. The works are being executed by Mr. Thos. Ennor, of Commercial-road East, under the superintendence of Mr. W. Wigginton, architect. The total cost will be 3,298*l.*, and the number of sittings nearly 900.

Yedingham (*Yorkshire*).—The new church which has just been completed in the parish of Yedingham has been opened for divine service. The old structure having become dilapidated and insecure, a movement was begun to rebuild the nave by subscription. The chancel, being the property of the lady of the manor, Lady Downe, was not interfered with: the entire rebuilding of this part of the edifice has, however, been undertaken by her ladyship, and the demolition of the present chancel commences forthwith. The restoration, unlike the nave, will be in the Early English style, and the chancel will be lengthened 8 feet, the plans being prepared by Mr. W. Butterfield, of London. The portion of the church restored and reopened for service is the nave. As before, the early Norman style has been adhered to by the architect, Mr. W. Tuke, of Bradford. The west end, bell turret, and chancel arch of the old structure remain: all else is new, and placed upon the old foundation. The exterior shows a buttressed west end, surmounted by a bell turret, with a Latin cross as finial. The old bells dated from the twelfth century: one has been re-hung, and the other it was found necessary to re-cast, which has been done by Mr. Mears, of London. The roof is open woodwork, the two centres in keeping with the architecture of the nave, being round, and springing from corbels in north and south walls. The whole of the woodwork is stained to correspond. The chancel arch is Norman. The whole of the work has been done by Mr. J. C. Teale, builder, of Malton, who also undertakes the rebuilding of the chancel.

Edlington (*Doncaster*).—By the liberality of the Rev. J. F. W. Woodyeare, of Crookhill Hall, near Doncaster, an improvement has been made in the chancel of Edlington Church; and the work has been carried out under the superintendence of Mr. Teale, architect, Doncaster, by whom the plans were drawn. The chancel has been wholly restored, with new ashlar work throughout. New altar-rails have been erected, and oak seats and benches. The floor has been laid with Minton's encaustic tiles. A stained glass window, to the memory of two sons of Mr. Woodyeare, is inserted in the north side. The artists were Messrs. Hughes & Ward, of London.

Stonton Wyville (*Market Harborough*).—The church of St. Denis here, an ancient structure, had been allowed to get into a rather dilapidated state. The rector, the Rev. T. Burnaby, has restored the chancel according to the original design, as far as could be ascertained. The window on the south side has been filled with stained glass by Mr. Wailes. It is a memorial window placed by Mrs. Burnaby, in memory of a son. The subject is Christ walking on the sea. The roof of the chancel is a new one, an open timber king-post roof. The chancel floor has been raised, and down the centre from the church to the altar is laid in tiles by Whetstone, of Coalville. Within the altar rails is also laid with the same kind of encaustic tiles.

Shireoaks (*Worksop*). — St. Luke's Church, here, erected at the cost of the Duke of Newcastle, has been consecrated. The church was commenced on the 18th of October, 1861, from designs sent in by Messrs. Hine & Evans, of Nottingham, architects. The foundation-stone was laid by the Prince of Wales, in the presence of a large number of the neighbouring gentry. Mr. R. Young was the contractor, and Mr. A. Appleton acted as clerk of the works throughout the erection. The interior arrangements and fittings are on a scale commensurate with the general design. The church is of English Gothic of the fourteenth century, and consists of a clerestoried nave, north and south aisles, an apsidal chancel, and a tower surmounted by a broached spire. The tower occupies a central position between the nave and chancel, and is flanked by an organ-recess on the north side, and by a vestry on the south. It is supported on piers and pointed arches of considerable height, the latter being moulded and springing from clustered marble shafts on carved corbels. The extreme length of the church is 108 feet, and the breadth 46 feet. The windows throughout are of geometric pattern, with traceried heads, and in each case are surmounted by a hood mould, terminating in carved bosses. The roofs are open timbered, the flat spaces between the spars being filled with ornamental stencilling: painted decoration is also applied to the walls in the form of inscriptions. The church is fitted with open benches; those in the chancel, together with the communion-table and lectern, being of oak. The walls throughout are built, externally and internally, of Steetly stone. The organ was supplied by Messrs. Lloyd & Dudgeon, of Nottingham. A peal of five bells has been placed in the tower. They have been furnished by Messrs. Taylor, of Loughborough.

DISSENTING CHURCH-BUILDING NEWS.

Portsmouth.—A new Baptist Church, in the Lombardic style, has been recently erected at Mile-end, a thriving part of this borough. Its dimensions are—length, 86 feet; width, in the main body 46 feet, in the front elevation 56 feet; height, to springing 31 feet, to the centre of curved ceiling 35½ feet. The front, which is done in stucco and cement, has pilasters and cornices, and a large centre window. The pewing is 2 feet 7½ inches wide, with 20 inches for each person. The curved ceiling is relieved by three ring mouldings round the ventilators, and by mitres springing from the angles. The preacher's platform is constructed with circular front and two stair-flights, and painted in lilac, white, and gilt, flattened. The lighting is secured by three pendants, the centre one having twenty-four globes, and the other two twelve each. The cost will be about 2,000*l.* The architect was Mr. E. J. Smith. The contractors were,—For the brickwork, slating, and plastering, Mr. H. W. Duffett; carpenter's and joiner's work, Mr. J. H. Allen; painting and glazing, Mr. S. Wells; iron-work and gas-fittings, Mr. W. Bendall, the three pendants being supplied by the Albion Gas-light Company.

Astwood Bank (*Redditch*).—The new Wesleyan Chapel at Astwood Bank has been opened. The length of the building is 37 feet, width 27 feet. The amount of the contract was 260*l.* The chapel is situate in one of the principal streets of the village. The edifice is in the Italian style of architecture, and is built with red and other coloured bricks. The roof is an open one. The architect was Mr. A. Smallwood, and the builder Mr. S. Scriven, both of Redditch.

Wolverhampton.—It is intended to erect a new building for the congregationalists of the Queen-street Chapel. Mr. Bidlake is the architect. The new building will occupy the site of the present chapel, as well as that of the adjoining house and garden, in Queen-street, and has been planned so as to be in communication with the large and comparatively new school-buildings in Castle-street and Market-street, and to form one complete structure with them. It will comprise, besides the church proper, which provides accommodation for about 1,300 persons, a large substructure, containing a lecture room, capable of seating upwards of 400 persons, and ministers' and deacons' vestries. The style of architecture is Italian, of an ornamental character, and the whole of the fronts towards Queen-street and Market-street will be faced with stone, the main building with ashlar, and the basement with coursed-work, hammer-dressed on the face. The principal front towards Queen-street consists of a centre and two side wings. The centre contains a large circular-headed Venetian window, and a double-entrance door on the ground-story, and is surmounted with an ornamental balustrade and pediment. The side wings contain the gallery-staircases, the entrance-doors to which front towards Queen-street, and are of corresponding design to the central doorway. A tower, with spire, rising to a height of about 120 feet, is placed at the angle of the building next Market-street. The whole cost will be about 8,000*l.*, including 1000*l.* for new freehold. Of this sum 6,000*l.* have been subscribed.

Welchpool.—The foundation stone of a new chapel for the Wesleyans, about to be erected in Welchpool, has been laid. The cost of site and chapel is estimated at 2,300*l.* The site is one of the best in the town, and stands to the west side of High-street, its front being parallel with the street. The style is to be Geometric, and the material brick, the principal front being faced with the local limestone in coursed rubble work. The buttresses, weatherings, window tracing, and dressings generally, will be of Box-pound stone. The principal feature of the main front will be a centre gable, with a tower and spire on the north side, and on the south side a square parapet and pinnacle. The spire will be 70 feet high; and the lower portion will be used for the staircase. In the centre gable will be double grouped and deeply recessed doorways, and over a three-light traceried-headed window. The interior arrangements are simple. The area of the chapel is 75 feet by 38 feet, affording accommodation on the ground-floor and in the gallery for 600 persons. The communion will be elevated two steps, and enclosed with rail and ornamental standards. The pews will be divided into a double row on each side. They will be 2 feet 8 inches wide, with inclined backs. The aisles will be 3 feet 6 inches wide. At the further end of the chapel from the tower will be a vestry and schoolroom, the latter 30 feet by 21 feet. The building is contracted for at the sum of 1,800*l.* by Mr. Potter, of Welchpool, builder, and will be carried out from the designs and under the superintendence of Mr. G. Bidlake, of Wolverhampton, architect.

Lowestoft. — The foundation-stone of the Sailors' Bethel and Reading-room has been laid here. The building will be in the Early English style of architecture, and will consist of a nave and chancel, the latter having the two-fold advantage of affording additional accommodation for the regular services, and by the aid of a screen across the chancel-arch, of forming a separate building for a reading and class-room for sailors during the week. The building is planned to accommodate 400 sailors. Mr. W. U. Chambers is the architect, and Mr. J. Newson, Jun., and Mr. Tuck are the contractors.

Bradford (*Yorkshire*).—The new chapel for the Independents, in Horton-lane, has been opened for divine service. The edifice is in the Elizabethan style of architecture, and is combined with schools and a connecting arcade. The chapel itself is flanked by a square tower at each angle, rising to a height of 90 feet, and composed of three stages of rusticated columns and pilasters, and surmounted by domes with gilded terminals. Between the towers are the three principal entrances, approached by a flight of steps 45 feet in width. The windows over the entrances and on each side of the building are decorated with Elizabethan ornaments, and the whole mass of the building is surmounted by an entablature and a parapet elaborately pierced. The principal façade towards Little Horton-lane, comprising the front of the chapel, the schools and arcade between, extends to a length of 185 feet. The entrance vestibule approached by the three doorways, is 44 feet in length and 10 feet in width, and is connected at each end with a staircase to the galleries in the angle towers. From the vestibule these doorways give access to the interior of the chapel, which is 108 feet in length, 64 feet in width, and 47 feet in height. The galleries on each side and at one end of the building are supported on bronzed columns of the Doric order, and upon these rest a second line of Corinthian columns of similar material, supporting the entablature and roof. The ceiling is vaulted, panelled, and decorated with Elizabethan ornaments and fretwork. The fronts of the galleries have panels filled in with fretwork executed in bronzed metal, and relieved with simple colour. The pulpit, executed in Caen stone, was presented to the chapel by Mr. G. Salt. Behind it, within a deep recess, is the organ, which stood in the old chapel, now enlarged and renovated by Messrs. Ratcliffe & Sagar,

Leeds. The building is warmed by hot water. The architects were Messrs. Lockwood & Mawson, of this town; and the chief contractors were Messrs. J. Moulson & Son, mason's work; Mr. B. Illingworth, joiner's work; Mr. J. Keighley, plumber's and glazier's work; Mr. Dixon, plasterer's work; Messrs. Briggs & Mensforth, painter's work; Mr. Pease, gas fittings; Messrs. J. & J. Cliff, and Messrs. Onions & Wheelhouse, iron work; and Messrs. Clapham, warming apparatus. The cost of the chapel and schools was rather more than 11,000*l.*

Keswick.—A new Wesleyan chapel has been opened in Keswick. The building occupies a site in Southey-street, Penrith-road. It is after a design by Mr. Ross, of Darlington, and was built by Messrs. Hodgson, of Keswick. It contains about 300 sittings, whereof one-third are free.

St. Ives (*Hunts*).—The foundation stone of a new church, designed for the use of the Independents and Baptists, at St. Ives, has been laid. The sum of 3,000*l.* was given by Mr. P. Brown towards its erection; also 5,000*l.* by Mr. B. Brown, and 5,000*l.* more by Mr. T. Coote. Another 1,000*l.* is required, which it is hoped will be subscribed before the building is completed.

Melbourne (*Victoria*).—The foundation stone of a new church, in connexion with the Wesleyan denomination, on Emerald Hill, has been laid by his Excellency Sir Henry Barkley, the Governor. A large number of persons assembled to witness the ceremony. The church will be in the Gothic style, the chief feature being a window and entrance in front, with turrets at the angles, and buttresses along the sides of the building. The edifice will be 72 feet long by 40 feet wide; the side walls 24 feet high, and the extreme height will reach 56 feet. The amount of the contract is 1,964*l.*, and Mr. Pigdon undertakes to finish it by the beginning of December. Messrs. Crouch & Wilson, of Melbourne, are the architects.

Canterbury (*New Zealand*).—Of seventeen competitive designs sent in for a new Wesleyan church at Christchurch, Canterbury, Messrs. Crouch & Wilson's design was selected for the first prize (50*l.*), and they have been authorized to carry out the work. The second prize (25*l.*) was awarded to Mr. S. C. Fair, a local architect.

STAINED GLASS.

Watford Church.—A new west window in commemoration of the marriage of the Prince of Wales is about to be placed in this church. The design of Messrs. Heaton, Butler, & Bayne has been accepted. It consists of three main divisions. The base is occupied by four Scriptural subjects bearing on marriage, in the following order:—1, Adam and Eve in the Garden; 2, Isaac and Rebecca meeting at Eventide in the Field; 3, Ruth and Boaz at the Gate of the City; 4, the Marriage of the Virgin Mary and Joseph. In the second or grand division is represented the "Marriage Feast of Cana, in Galilee." The table is carried across the four lights, which gives unity to the design. The third, and upper division, consists of the coats of arms of the Prince and Princess of Wales, and other heraldic devices, with the royal pair, and the date of their marriage—"March 10th, A.D. 1863." The stonework has been entrusted to Mr. Coney. The total cost of the window will be 163*l.*, of which 133*l.* has already been subscribed.

Carfax Church (*Oxford*).—The subscription-list for a proposed Morrell Memorial Window in Carfax Church has been commenced under good auspices; but it being understood that, in consequence of the great dimensions of the east window, and the intention to have it executed in the best style of the art (considering that it is in the City Church and in the centre of Oxford), its cost will probably amount to 500*l.*, so that liberal subscriptions are necessary.

Woodchester Church.—We are requested to state that the window placed in this church to the memory of Dr. Williams, as well as that given by the architect, was from the studio of Messrs. Lavers & Barraud. The Williams window was designed by Mr. Westlake.

St. Mary's, Nottingham.—The window designed as a memorial of Prince Albert for this church is now in its place in the east end of the church. The style of the stonework is Gothic, of the latter part of the fifteenth century. It is a nine-light window divided into thirty-six lights, besides the head, which is divided into twenty-six lights. At the top of the window the tracery is filled with the arms of England quartered with those of Saxe-Gotha, and directly below are Prince Albert's own arms. On the left, in the upper compartment, are the Nottingham arms, and on the right, in the corresponding position, the arms of the diocese of Lincoln. Each heraldic emblazonry is at the apex of its respective division. Below the coats of arms mentioned are four angels bearing scrolls, representing Prudence, Justice, Fortitude, and Temperance. In the central compartment, which consists of a series of single lights, are figures of the four Evangelists, with their distinctive emblems. The principal divisions at either side are filled with eight pictures of Scripture subjects—each picture being carried through four lights or openings. First, on the top, to the left of the spectator from the chancel, is the "Shepherd seeking his lost sheep." In another part of the picture the shepherd is shown returning with the lost sheep upon his shoulders. In the second compartment at the same side is a representation of the widows lamenting Dorcas. The third compartment is devoted to the miracle of our Saviour healing the blind and the dumb. The fourth, or lower compartment, represents the miracle of healing the lame, the blind, and the deaf. First, on the right side, at the top, is the story of the Good Samaritan. The fourth compartment contains a representation of the miracle of Feeding the Multitude. Each picture is surmounted with roses and crowns. The artists were Messrs. Hardman & Co., of London and Birmingham.

Banwell Church, Somerset.—This church, which already contains several memorial windows, has lately had added to it another to the late Mr. A. Ricketts, who possessed property in the parish. The window is on the north side of the church, and like the church itself, is Perpendicular in architecture. It consists of three main compartments, surmounted with tracery. The principal openings are composed of tabernacle work in which occur panels containing the representation of the Crucifixion of Our Lord, the tracery being filled with angels bearing the emblems of His Passion: these are supported by columns, interspersed with angels in the attitude of praying and praise. Beneath all this occur three large subjects. The centre one represents Christ bearing the Cross, with a female figure kneeling before him: in the left panel Christ appears as the good shepherd, and on the right, *Noli me tangere.* The three texts are inscribed on the pedestals, and are, "I know my sheep and am known of mine;" "He hath borne our griefs and carried our sorrows;" "Whosoever liveth and believeth in me shall never die." Messrs. Warrington & Sons, of London, are the artists who have supplied this and other windows in the church.

SCHOOL-BUILDING NEWS.

Leicester.—A new school has just been erected by Mr. J. Harris, at his sole cost, to supply the wants of the increasing population of the Westcoats neighbourhood. The architects were Messrs. Goddard & Son, and the school is designed partially for holding religious services in this part of the town. It is situate at the corner of Ruding-street, and has a high pitched roof and spiral bell turret. There is a porch, and a class-room on the south side of the main building. The opened timbered roof and Gothic windows give an ecclesiastical appearance to the interior. The school-room is 60 feet long, and 10 feet wide, and will accommodate 135 children, with 188 cubic feet to each child. There are, besides, a small class-room, made so as to serve as a vestry, when the school is open for divine service; two hat and cloak-rooms, and a porch. Mr. Clifton was the bricklayer and carpenter; Mr. Firn, the stone mason; Mr. Fozzard, the plumber and glazier; Mr. Barfield executed the carving; and Messrs. Hunt & Pickering the wrought-iron palisading and iron founder's work. The whole was done under the superintendence of Messrs. Goddard & Son, the architects.

Derby.—New school-rooms have been erected for the congregationalists by the side of the Rev. H. Ollard's Chapel, on the London-road. The building is of white brick and Hollington stone, and an ornamental iron ridge cresting on the roof gives a finish to the whole. The school-rooms are each 50 feet by 30 feet, and 15 feet high. The rooms will accommodate 50 children. The designs were prepared by, and the work executed under the superintendence of, the architect, Mr. George Thompson, of Derby. The builder was Mr. John Wood, of Derby. The cost was 1,230*l.*

Rushholme (*Lancashire*).—A new school has just been commenced, on a site adjoining the lately completed chapel in Dickenson-road. The building comprises a "mixed" schoolroom, with class-rooms and porch, and the usual offices. Accommodation is provided for about 250 children. The material is red brick, moulded in the cornices and strings; and the style is the simplest Pointed. The windows have wooden monials; and the porch a simple lean-to, and bracketed roof. The contract has been taken by Messrs. Barnes & Howe, of Ardwick, under the direction of the architect, Mr. J. Medland Taylor, of Manchester.

York.—The restoration and re-opening of the Centenary School-rooms, York, have just taken place. During a fire which broke out on the premises of Messrs. Butterfield, Clarke, & Co., the school-rooms in question were very seriously damaged. The trustees, however, immediately took steps for repairing the injury; and, as the property was unfortunately uninsured, they at once subscribed amongst themselves about 600*l.*, and this sum has since been increased to an amount sufficient to cover the expense of restoration, viz., between 900*l.* and 1,000*l.* The work which has now been completed has been superintended by Mr. E. Taylor, architect, while the following were the contractors:—Mr. Mennell, bricklayer and mason; Messrs. Shaw & Young, joiners; Mr. Rawling, plasterer; Mr. T. Franklin, smith; Messrs. Cattley & Sons, slaters; Mr. W. Hartley, plumber and glazier; and Mr. F. Masser, painter.

SCHOOLS OF ART.

The Cambridge School.—The annual report of this school, presented at a general meeting of the committee, states, that the continued progress of the school during the past year is satisfactory. The amount of fees received for instruction in the classes of the central school, since Michaelmas, 1862, was 260*l.* 18s. 9d., a considerable increase on the 209*l.* 17s. of the previous year. The number of pupils' fees for attendance was 1,105 and 718 in the two years respectively. In the opinion of the committee, the new regulations are likely to have a very mischievous effect on the teaching of art schools throughout the country, as they will tend to disparage the serious study of art in all except the artisan classes, and reintroduce the shallow dilettantism which hitherto they have with much success endeavoured to combat: they will also unsettle the minds of the masters of the schools." The committee say, they would be "glad to join other schools of art in an earnest united remonstrance against the faithless, unwise, arbitrary policy of the Revised Code."

The Cirencester School.—The distribution of prize-medals and other awards gained by the successful students of this school at the art-inspector's visit, in April last, has been made, in the Corn Hall. The room was almost filled with the gentry, tradespeople, and the working classes. The walls were covered with the works of students. In reference to this school, the Secretary of the Department at South Kensington has reported, "Cirencester, considered with regard to its population, produces greater results than any school of art in the kingdom:" the report, however, states that the average attendance at the classes has unhappily been diminishing—being for the three years, 92, 76, and 62 respectively, the falling off being in some measure the artisans' class, for the benefit of which section of the community the schools of art are specially designed. A 10-guinea line engraving of "St. John the Evangelist" was on this occasion presented to the art-master, Mr. Miller.

The Bristol School.—The report of the committee of this school to the annual meeting, held on the 24th August last, with the financial statement and resolutions as already noticed, has been issued in a printed form.

METROPOLITAN BOARD OF WORKS: DISPOSAL OF THE SEWAGE.

At the last weekly meeting of the Board a letter was received from Viscount Torrington, Sir Charles Fox, and Mr. Thornton Hunt, proposing to erect, at seven or more stations, "steam-pumping engines of (say) a total of 3,500 horse-power, capable of being doubled if required; to receive the ordinary sewage from the main sewers at these stations, and to pump it thence through seven cast-iron besins, of 3 feet in diameter each, laid along the banks of the river, as shown on the plan, with provisions for interchange between the basins in case of accident; thence to convey the sewage along the roads and railways to lands situate in the counties of Essex, Kent, Surrey, and Berks, to which lands,

amounting to some 250,000 acres, it is proposed to apply the sewage, partly from detached reservoirs, but chiefly by jets. Finally, to construct as filters 500 to 1,000 acres of osier beds, through which to pass the sewage after it has left the other lands, in order fully to deprive it of all deleterious and injurious matters." They ask for "a concession of the whole of the sewage for a period of sixty years from the completion of the works, the lease to be renewable at the expiration of that period upon five years' prior notice, and upon terms to be agreed upon." If they deodorize the sewage, the Board will be required to pay one half of the cost of such deodorization. The Board referred the proposal to the Main Drainage Committee.

THE LATE ACCIDENT AT THE NEW CROSS RAILWAY STATION.

THE gale which blew on the 30th ult. took off the iron roof of a shed for the repair of engines at New Cross Wall, and threw down the walls, whereby Henry Woodrow, an engine-fitter, was unfortunately killed. At the inquest, held on Monday, Mr. Joseph Craven, assistant locomotive superintendent to the company, said,—Pieces of timber and slate, former portions of the roof, had been carried as much as sixty yards from the shed, consequently the force of the wind must have been very great. The deceased was jammed between the sand-box of the engine and the rail. The length of the building was 145 feet, and the width 42 feet; the spring of the roof being 19 feet. The wall was 14 inches thick, with additional piers at an interval of 21 feet. The piers were 23 inches thick.

The materials used in the construction of the building were good stock bricks, and the rest of the materials were also very good. The height of the centre of the roof from the side wall was 9 feet. The roof was composed of T-iron girders and wooden rafters. Iron girders were let into the wall, and secured to iron plates built into it. The two walls seemed to have given way at the same time, and the roof to have been lifted bodily, the wall being lifted up with the roof from the bottom.

The Coroner having summed up the evidence, the jury, after a short consultation, returned a verdict of "Accidental Death."

THE STAGE.

The Lyceum Theatre.—Much that we have long desired in the way of completeness of scenery, the avoidance of raggedness in "looking off," has been effected by Mr. Fechter, in the mounting of his new venture, "Bel Demonio," which displays a larger number of elaborate set scenes than any piece that has been produced for some time past. The first scene, the Studio in the Abbey ruins, occupies no less than four planes, for example. The mountain-torrent, in the second act, and the Chapel of de Castro, in the third, are excellent. The stage is a new one, and has been greatly improved. The footlights are sunk beneath the level, apparently on the plan given in our pages some time ago, and managed more satisfactorily than in the new Paris theatres, as the reflector rises so slightly above the level of the stage as to offer no obstruction to the sight. We may find another opportunity to speak more of the arrangements here and of the piece. Suffice it at present to say, that the latter is interesting, and is remarkably well played by Mr. Fechter, Miss Kate Terry, Mr. Emery, and Mr. John Brougham, the adapter.

Gallery of Illustration.—"*Opera di Camera.*" The experiment on Monday night was very successful, and "Jessy Lea" will doubtless have a good succession of well-pleased visitors. Mr. German Reed introduces the opera genially, and the music is sung by the always safe Miss Poole, Miss Edith Wynne (remarkably well), Mr. Whitfin, and Mr. Wilkinson. A pretty scene, the front of a cottage by the seaside, with view of the sea, has been painted for it, and the whole thing runs very pleasantly off. Some of the music is in Mr. Macfarren's best manner, and will be popular in the drawing-rooms.

Man and the Drama.—There is a run just now on the genus *homo* in the playbills,—playbills, too, of a size that has seldom before been seen. Thus at the Olympic we have "The Ticket of Leave *Man*;" at the Royalty Theatre, "The *Man* at the Wheel;" at Drury-lane there is "*Man*-fred;" and the only conjurer just now in view is Herr-*man*.

THE CHANCEL.

SIR,—In that passage in my letter in your last week's paper referring the origin of the chancel to the platform in the meeting halls of ancient Pagan Rome, with "cancelli," or low railings, at its edge, behind which the judge or president of the meeting sat, you have appended an editorial note asking whether "there was not some allusive reference to the god behind a screen?"

I say no to this most emphatically; and for the following reasons:—The basilica was in use when Rome was a republic, and at a time when any pretensions to godship on the part of one of her civil judges would infallibly have brought down on his neck the lictor's axe. The basilicas were all arranged alike as to their chancel, or railed platforms, whether used as courts of justice or simply for ordinary public meetings. The veil in a temple was used for concealment; the "cancelli," simply to keep the president of the meeting from falling off his platform when standing upon it to address the people.

The significance of the temple arrangements and details, and the veneration accorded to them, is a proof that no mockery of a sacred symbol would be introduced in a civil structure.

The primitive Christians never by any chance placed their "table" on the chancel platforms; and thus gave their unanimous judgment against the idea that the chancel was in any way to be considered as a sacred place.

JOHN ELLIOTT.

*** Mr. Elliott's emphatical negative has little force against the questions in our brief note; because these questions did not necessarily imply either "pretensions to Godship" or "mockery of a sacred symbol" on the part of the civil judges at all. By "allusive connexion" we simply meant to hint that the basilican arrangement might be a traditional *vestigium*, as it were, of still more ancient temple arrangements, not only unintended, it might be, but even unrecognized by, and unknown to, the civil judges themselves. And although "the vail in a temple was used for concealment," this was not always so; nor is it now; for example, in Buddhist temples, the simple arrangements of which in this respect still very much resemble those of the Roman basilica; and, although Greek and Roman temples were certainly not Buddhist ones, there is a unity of ideas prevalent throughout all ancient mythologies, as has been sufficiently shown of late in the *Builder*. Even in the temple of Ceres at Eleusis the vail did not always *conceal* the supposed deity or oracle behind it, as we find in the initiation of Lucius, who, "arrayed like the sun," or *robed* as the solar God himself, and placed like a statue behind the vail, was exhibited to the people as a God by the complete withdrawal of the vail for the time. In such Buddhist temples as those more especially referred to, there is no vail, but only a railing, or screen, separating the Buddha from the people; and in Thibet it is even now customary for a Lama to seat himself on *an altar*, in the *place* of the Buddha; and, after certain solemnities, he is not only consulted as an oracle, but as a judge and adviser, in all sorts of mundane affairs. Such practices may give us some slight idea of what was meant by the mythological assertion that the last God, or Goddess, who left the earth, was Astrea, the Goddess of Justice. There are, we believe, obscure allusive connexions, or traditional *vestigia*, if we may so call them, even in modern western civilization, which bear upon this subject. "Beds of Justice," in French law, may fairly be classed with these, as also the Russian "Vaults of Justice." In Ireland, ancient heathen *altars* are called "Bedds;" and the word really seems to have an etymological connexion with what *we* mean by beds. Thus the oracle in the Temple of Belus at Babylon, according to Herodotus, lay upon "an elegant bed" in the place of an altar (besides, and near to, which there was a golden *table*); and there the God "visited," or descended upon, the "chosen priestess." The Egyptian God invoked upon "the beautiful couch," has a significant allusion to the same thing. We are persuaded, too, notwithstanding the more matter of fact explanation of the origin of the Lord *Chancellor's* woolsack, in the House of Lords, that *it* was originally a "bed of justice," where the God, or Lord, was seated, or lay, like a Buddha, or other oracle, on a "bedd" or altar. We have already extended this note beyond ordinary limits, and can only add that, notwithstanding all we have said, we do not mean to express *any* opinion, adverse or otherwise, as to Mr. Elliott's views, as regards the adoption of the basilica by the ancient Christians. We may admit, however, that if the civil judges who sat as Chancellors behind the cancelli were ignorant of the allusive significance of the place they occupied, no doubt the Christians who adopted the basilican arrangements might be equally ignorant.

PORTLAND CEMENT.

SIR,—I am much obliged to your respectable correspondents for an exposition of the generally-accepted theory of the conversion of the components of Portland cement into a double silicate of lime and alumina; showing how this is effected by amalgamation and due calcination. An apparently good cement is to be produced in the manner they describe. This, however, does not, nor does anything they say, satisfy my conviction as to its durability.

As manufacturers who know so well how to make it, they will, perhaps, be surprised when I state they are amongst those to whom I alluded in my last letter, having supplied an article that every one admired, some *four years ago*, but which is *now* failing as a stucco. It is prominent at the West end of the town, and I need not further refer to it, unless it be required of me. *E pluribus unum.* Another manufacturer, confident, but, I believe, ignorant of the properties of the article,—confident of the perfection of his combination,—exposes a large specimen with his name upon it, and invites attention to its merits, and especially to its durability. It is full of open cracks, and looks like a stone map, with the main roads very distinctly laid down. Yet this was rewarded by a medal from the Scientific Commissioners of the 1851 Exhibition! I do not quote these instances as exceptions. Look further at the rows and streets in Belgravia, and see why Portland cement, introduced chiefly because it was of a pleasant colour, is nearly all of it painted with oil paint; and, where not so painted, look closely at the surfaces. Perhaps it is every body's cement!

The reason of these failures of practised manufacturers, with first-rate workmanship, is the gist of my inquiry. And I will ask your correspondents, who seem to speak disparagingly of Roman cement, to point out a similar failure of bulging and peeling in that article, where similar workmanship has been employed.

Their last paragraph only proves how extensively the risk has been encountered by builders and architects, and who, I fear, have only to extend their patience,—say, until the next medal be awarded,—to see what catastrophes ensue. If, as they say, the use of Roman cement has "practically fallen to nothing," I say, *resurget*. I do not believe the composite cement to be of equal durability with the natural cements.

Perhaps you will permit me to say a few words upon the workmanship of Portland. I have witnessed a great deal. I have seen many surfaces peel off, and not until they had been left, perhaps three months, and the scaffolding been taken away. Why will not plasterers use thicker screeds, and finish their work in one coat with the screed rule, instead of working all the water used in gauging to the surface with the hand-float and the trowel, absolutely spoiling the thinner coat whilst they lay it on? CAUTIOUS.

JAPANESE DECORATION *VERSUS* "THE FLAT GEOMETRIC."

THE object of this letter is not exactly to uphold Japanese decoration against all other styles, but rather to show that the principles of Japanese work are right, and that our present popular "flat treatment" principles are opposed to pure art. All will admit that a fresco painting is good decoration when done by a great artist: now this same work, if done with less finish, is also good; and if the same were done even in two colours by a master-hand, it would be equally good decoration: it would be infinitely more interesting than if the work were executed with flat figures, geometrical plants and hues, &c. And I maintain on this score, that the willow-pattern plate, which is a landscape with a very considerable homely poetical feeling, is much better decoration than a series of leaves treated flatly and geometrically: it contains much more of the poetry of nature. If Japanese work has at any time an appearance of flatness, I assert most positively it is never sought after for its own sake, but arises from the simplicity of treatment. Anything done with a few lines, or in one colour, will have, more or less, an appearance of flatness; but the artist did not set out with the idea of designing "in flat treatment." It is as natural as the simple means used

will permit. We all know the celebrated sporting handkerchief in Mr. Ruskin's "Two Paths:" that is geometrical treatment, but not art; and no geometrical treatment can compare with nature, because it is wanting in the poetry of nature, that which alone appeals to the mental faculties of man. This is a metaphysical truth too apparent to require any defence. A great artist, when designing a diaper, does not start with the idea of designing anything flat: he designs something as natural as circumstances will permit, something with as much of the poetry of nature as the simple means at his disposal will allow of. Take as an instance a well-known master-piece of design, the title-page of "Goblin Market," published by Macmillan.

The two diapers at the top are drawn without any geometrical exactness, and are, consequently, very picturesque and interesting. Then there are four sprigs of lovely tenderness, by no means stiff or geometrical, but, drawn as naturally as possible with such simple materials, they have all the poetry of nature. But they are somewhat flat, which arises not from any desire on the part of the artist to make a flat design, but from the simplicity of the drawing; for it is evident his desire was to give as much of nature as he could. Hence I maintain the flatness observed in designs by great masters does not arise from any predetermined theory, but from the nature of the work; and, moreover, no great artist ever distorted nature by "treating" it geometrically. A great artist is incapable of such barbarism: he could not be so destitute of all noble feeling for the poetry of nature. Geometrical patterns are hard, coarse, and spring from the same want of tenderness, pensiveness, and poetic feeling that we observe in the coarse vulgar mouldings common in modern architecture. The flight of birds, the bird on the tree, or the wild animal under the bush of Japanese design, shows a real love of the poetry of nature which is totally absent from the bands, zigzags, and circles of "geometrical design."

QUAM DILECTA.

OPEN SPACES AND SQUARES.

THE waste condition of many of our public spaces and the want of horticulture in the better squares, now that the recent Act empowers parochial authorities to take them in charge, ought to receive the attention of the districts in which they are situate, the season being now opportune for improvements, such as planting, trenching, turfing, and cutting away all decayed trees or superfluous growth of scrub.

On a review of the better squares, it may be remarked that the external borders are generally screened off by a hedge, close within the iron fence, just shutting out all view of what ought to offer a pleasing aspect to the opposite houses as well as to passers by; whereas the outer margin should be always bordered in turf, so as to form an agreeable and refreshing outline, whatever the style of plantation adopted may be.

The condition of trees in the oldest and most central squares, and of the shrubs, plants, and turf, where any care is manifested in the culture, proves how easily a reform might be carried out which would increase the value of all neighbouring property and diffuse general satisfaction in these respects amongst all Londoners and visitors; and as to the style of planting out and embellishing, a very fair example has already been set in the new borders of Hyde and Regent's Parks and Kensington walks.

First, as to the forest trees. In some inclosures, such as the miniature Golden-square, two of the worst grown out of three ought to be removed; and this thinning process is equally needed in the groves of Kensington; where also dead and decaying trees much disfigure the otherwise pleasing effect of the survivors. The most unaccountable neglect, in this particular, is to be seen in a space of an acre, railed round, in a really good neighbourhood, formerly called Paddington Green (now more properly *Brown*). A footway crosses this inclosure, which on two sides has ranges of good houses and forecourts; on the west, a fine church with satisfactory precincts; and on the south the main Harrow-road. Herein are twenty trees of mature growth, five of which are dead, decaying, and stripped of bark. This open is of the greatest value to residents and children; but utter neglect has converted the whole area to a bowling and tilt yard. The rational and healthful amusement of children need be in no degree obstructed by reclaiming and planting (say one-half of the plot), turfing round its outer border, planting and defending the beds with a strained wire cord, and by placing fixed seats or forms at suitable intervals. By such management, not only the trees but flowers could be provided, while this now repulsive inclosure might be rendered an ornament to the neighbourhood, and a solace to the residents.

By extending the same sort of management to the more important squares, such as Lincoln's-Inn-fields, there is no reason to suppose that these gardens, as yet locked against the whole community, should not be as secure from damage or wanton mischief as the park borders, or the more central Temple Gardens, which have always been so liberally and gratuitously thrown open for the enjoyment of all classes. Formerly, when comparatively rural suburbs were within walking range of the central metropolis, the embargo imposed upon locked-up spaces was as unimportant as the screening off the view by close bordering hedges; now, however, all squares, all trees, and every patch of verdure, have attained a value just in proportion to the denseness of the crowds compacted within the bills of mortality.

To cite all the gardens and railed inclosures which need renovation and care, would fill many columns; but allusion to the waste condition of Oxford and Cambridge terraces, in the greater portion of those ranges, may for the present suffice.

Should the advice be acted on with respect to closed churchyards, by railing in and planting, as recommended in last week's *Builder*, then, with the improvement of our squares, London might stand well in comparison with other cities.

J. NEWTON, F.R.H.S.

HOW PREVENT AN ECHO?

SIR,—Will any of your readers inform me what means should be adopted to endeavour to destroy a loud and exceedingly unpleasant echo in a country school-room. The room is lofty, with gable ends and spar to the roof, which is framed with trusses and plastered between the rafters, the size about 50 feet by 24 feet, and the roof at an angle of as nearly as possible 45 degrees. Woollen cloths have been hung upon the trusses, which have produced a slight improvement, but it is desired to adopt some simple, inexpensive, and effectual means to remedy a defect which materially interferes with the operations of the school. Would the introduction of a louvre and openings in each gable, or an open ridge the whole length of school-room, effect the object? A suggestion from any of your readers experienced in these matters would be gratefully received by the rector and myself.

E. C. O.

NEWNHAM (GLOUCESTERSHIRE) LOCAL BOARD.

SIR,—We often hear of the jobbery of public bodies, but I never met with a more unblushing case, or one betraying more *stupidity*, than the "election" of surveyor to the Board for the districts of Aure, Newnham, and Westbury-on-Severn. This sagacious and immaculate body advertised for candidates to send in applications, &c., by the 28 h October, and that they would "on Friday, the 30th day of October instant, at a *quarter* past twelve a.m. [observe the precision], at the town-hall, Newnham, proceed to the election of a surveyor and inspector of nuisances for the above-named district."

I unwittingly wasted my time and money in replying to this specious announcement. My application was duly posted on the 27th, and doubtless arrived in due time, and on Friday morning, the 30th inst., at a *quarter past eight*, just four hours before the time announced for the meeting, I received by post, at the distance of one hundred miles from Newnham, my testimonials, inclosed in an envelope bearing the Newnham post-mark of the 29th, but without the slightest intimation or any letter stating the respit of the aforesaid "election."

Comment on the above is unnecessary; but the public have a right to know by what authority a decision could be arrived at before the legally advertised meeting had taken place.

C. E.

PATENTS CONNECTED WITH BUILDING.*

OVENS OR KILNS FOR FIRING, BURNING, OR BAKING POTTERY, BRICKS, TILES, &c.—*C. Malpas.* Dated 21st February, 1863.—The patentee claims, first, the construction and employment of annular ovens or kilns with revolving beds for baking, burning, or firing pottery ware and earthen or ceramic articles, having one or more external furnaces; and diametrically opposite these, or at some distance from the same, one or more openings for filling in and removing the goods to be fired, and in which ovens or kilns the draught from the furnace or furnaces passes directly underneath the objects to be fired, and thence vertically up among the same into one or more flues formed over or near the roof of the oven or kiln. Also in combination with the above the arrangement of flues lining a certain portion of the walls of the oven or kiln for gradually raising the temperature of the articles to be fired before they reach the furnaces, substantially as set forth. Secondly, the construction and employment of a chamber serving as a mustering, drying, and placing room, formed on the top of annular ovens, or kilns with rotating beds, so as to utilise the spare heat therefrom. Thirdly, the patentee claims in combination the arrangement of the several parts of annular ovens or kilns with rotating beds, as described.

HEATING AND WARMING.—*G. Blake.* Dated 29th January, 1863.—This invention relates to the construction of stoves of corrugated or waved or zig-zag iron (or other suitable metal) or fire-clay. A fire placed inside the improved stove is the usual source of heat, but steam, hot water, or a gas flame is applicable. In the first place, the patentee prefers to use plain sheets of iron to form the case, to which the corrugated iron or material is fastened by means of rivets, bolts, or otherwise, such corrugated iron or material deriving its heat through the case of the stove partly by radiation and partly by conduction; but these stoves may be constructed without such cases of plain sheets of iron when the corrugated iron or material forms the case, deriving its heat directly from the fire or furnace. In this form the corrugated stove may be constructed of fire-clay (burnt in the usual way), or of cast-iron or wrought-iron.

APPARATUS FOR COPYING AND REPRODUCING SCULPTURE AND OTHER OBJECTS OF ART. W. Clark. A communication. Dated 28th January, 1863.—This invention relates to an improved process termed photo-sculpture, which is based on the employment of photography in connexion with the pantograph. By this improved process the patentee can produce sculpture exactly similar to the model, whether living or otherwise, with much greater rapidity, at a less cost, and by the aid of persons having no previous knowledge of the art. He can further lessen the time necessary for the sitting, and produce sculpture of larger or smaller dimensions than the original, or in any other proportions desired. This invention cannot be described without reference to the drawings.

PRESERVING TIMBER.—*H. P. Barlow.* A communication. Dated 28th January, 1863.—This invention consists in placing the timber in a closed vessel, from which the air is exhausted by suitable air-pump machinery, then subjecting it to the action of a metallic salt, and then to the action of tar, or other bituminous substance.

METALLIC BOXES.—*W. Rollason.* Dated 27th January, 1863.—This invention has for its object improvements in metal boxes, cases, or holders for containing lucifer matches and other lights, and for other purposes; and consists in so shaping and forming the plates of which the said boxes are made that the joints at the angles formed by the junction of the sides and ends are self-attaching, or self-securing, when fitted and pressed together, forming a box or case without requiring the angles to be soldered or otherwise fastened by any additional matter.

HORTICULTURAL BUILDINGS AND OTHER GLAZED EXTREMITIES.—*J. Miller.* Dated 5th March, 1861.—For the purposes of this invention the heads and sills of the side and end frames are connected together by metal bands or angle iron, and the uprights or mullions are tenoned to these frames; and when either the side or end frames are of considerable length, the patentee sometimes forms them in separate parts or sections by dividing them vertically through some of the vertical portions or mullions, and then connecting such divided parts by screws, so that they may be readily separated and reconnected when required. To give strength and stability to such structures, he supplies cross stays of iron or wood from the mullions of one side to those of the other, connected by wood screws. The side or end sashes, in place of being hung, are formed in two sets to slide one over or to pass one in front of the other on metal ridges which are perforated to admit of water collecting between them freely passing away. The overlapping portions, when the sashes are closed, lie behind the uprights or mullions. He also forms the roof in similar parts or sections by division of the main beams, which are in this case attached to the glazed frames. He also, for a span roof, employs two ridge pieces with a space between them for the free passage of air, and he connects these together at intervals. Over these connexions, and between the ridge pieces, he applies a stationary plate or board with perforations at intervals, and over this he applies another plate or board, also perforated, and capable of being slidden, so that either the perforated or the plain portions of this sliding plate or board may come over the perforations of the stationary plate or board. The sliding plate or board is moved by a lever or other suitable means; and, if desired, there may be two or more of them. Over such perforated plates or boards, and the ridge pieces between which they are placed, and somewhat above

* Selected from the lists in the *Engineer*.

them, supported at intervals so as to admit of ventilation, he applies a narrow span roof.

Apparatus for Manufacturing Bricks, Tiles, Pipes, &c.—*J. Cowley.* Dated 9th March, 1863.—This invention relates to a peculiar arrangement, construction, and combination of machinery or apparatus for moulded bricks, brick mouldings, perforated bricks, tiles, and drain-pipes, whereby less power is required to actuate the machine, and a smaller proportion of water employed than in the ordinary methods of brick-making. According to this invention a hopper and pug-mill, with a receiving box and piston, are employed in combination with a mould box, which is also provided with a piston of its own. The clay, which may be taken direct from the bank, is placed in the hopper, and prepared and well worked by the knives of the pug mill, which also force it down from the receiving box, from whence it is forced by a piston or plunger into the mould. If a perforated, or partially perforated, or recessed brick is required, this mould-box is provided with cores of greater or less length to produce the perforations or indentations intended to be produced. From this mould the brick thus moulded and pressed is expelled by a piston working therein, and is received on to an endless travelling web, which carries it clear of the machine. In making tiles and pipes the brick mould is removed and replaced by the required mould or die to suit the articles to be manufactured.

Books Received.

The Quarterly Review. October, 1863. Murray.

The leading article in the new number of the *Quarterly* is a somewhat comprehensive one on the "Progress of Engineering Science," by a writer whose course of thought may readily be recognized. The article concludes with a parallel and contrast between engineering and architecture, which we may here quote at length:—

"Besides the admiration which the works of our great engineers excite from the grandeur of their conception or the mechanical skill displayed in their execution, they have still another merit as worthy of the attention of the philosophical inquirer as either of these. They are the best and most complete examples that exist in modern times of an art carried out on scientific principles, and according to those processes by which alone success has hitherto been, or, so far as we can see, ever will be, achieved in any art. From the days of old Sir Hugh Myddelton to the present time, the only question with an engineer, after mastering the conditions of the problem put before him, was how he could most efficiently carry out the work with the most suitable materials and within the limits of the means at his command. In doing this the engineers have eagerly appropriated every scientific discovery, and availed themselves of every new invention. They have always used the materials best adapted for their purposes, and in the mode in which most work could be got out of them. They have never looked backwards to the exploded form of ancient days, but always acknowledged the age in which they lived, trying to outstep even its rate of progress.

In this respect the engineers contrast singularly with the architects, who form the other branch of one and the same profession. The latter, instead of following out principles, are content to copy forms, rarely thinking of what is really best under the circumstances. It is sufficient for them to know that a thing was done by some other people in some bygone day, and without thinking how social circumstances may have changed or the arts progressed since that time. If it has been done before, it ought, according to their creed, to be done again. They aim at restoring an artistic heptarchy in the midst of the progress of the nineteenth century.

The principles which the engineers are following out are identical with those which taught the Egyptians how to erect the wondrous temples which still adorn the banks of the Nile, by the use of which the Greeks perfected their architecture, and which enabled the masons in the Middle Ages to erect those cathedrals and castles which we still admire so much. In all other ages but this the principles of architecture were as well understood and as fixed as those of engineering. They were, in fact, identical; and it was just as easy to ascertain then what was the best design for a cathedral or a mansion, as it is now to know what is the best form of a ship or the best mode of building a bridge.

The consequence of this divergence of principle is, that the architects are quarrelling over Greek mouldings and Gothic pinnacles, and dreaming of reproducing the elegance of Classical times, or the blundering enthusiasm of the Middle Ages, while the engineers are spanning our rivers with structures such as the world never saw before,—bridging our valleys with viaducts, arching under our mountains, and roofing acres for stations. They are, in fact, executing a series of works that throw everything hitherto done into the shade: but all this, unfortunately, without that touch of higher art which is alone wanted for perfection; and this simply because the building profession is divided against itself. Because its two branches are conducted on different principles they cannot work together. The engineers cannot forego theirs, because they are the only principles which men of common sense can follow: so, unless the architects will consent to forego some of their archæological fancies, and work harmoniously with the engineers, we may be condemned to live in the midst of ugliness for ever. It is only this re-union that is wanted to perfect the works described above, and it ought to be easy of accomplishment. The architects themselves would delight in the change. It is the public, who are their employers, who do not see the necessity for it, and cannot understand its bearing. When once the fact is appreciated we shall surpass all preceding ages in architecture, as we have done in engineering; and if the engineers can only force this fact on public attention, they will have done a greater service than in bridging the Menai Straits, or in tunnelling through the Alps. To call architecture back within the domain of logic and of common sense is what is most wanted on the part of the engineers to complete the services which they have rendered and are rendering to mankind."

In speaking of the great works done by the modern engineers, the reviewer remarks that,—

"Twenty years ago we looked with wonder at the great halls of Padua and Westminster, though the former is only 84 feet span, and the latter 68, and were astonished at the boldness of their construction. But now we regard with indifference two such halls as those which compose the station of the Great Northern Railway at King's Cross, 105 feet wide, 800 long, and 91 high; and even such a roof as that of the Lime-street Station at Liverpool, 152 feet wide, does not excite astonishment. Even now it is only the engineer who knows how difficult the task is—or rather was—that sees anything to be surprised at in the great roof of the station at Birmingham, 654 feet long, and at one end 212 feet wide, without any internal supports. Yet this roof, which is perfectly stable, was erected at a cost of 1*l.* 8*s.* 6*d.* per square yard, and promises to answer for many a long day all the purposes for which it was intended. As a general rule these works have been carried out in too great haste to allow of careful artistic elaboration, and with too much of a feeling that even the largest were only suited to present wants, and would require extension hereafter. They are thus open to adverse criticism: but it is an immense gain to have conquered space; to know that there is no practical limit to the extent of our roofs, and consequently that a largeness of parts may be introduced into our buildings, which cannot fail to have a beneficial effect on the art of design."

As no very clear account has been given of the uses of hydraulic power on Sir William Armstrong's principle, the reviewer's summary may be useful:—

"Recently a new application of water-power has been effected by the inventive genius of Sir W. Armstrong. He first applied it at Newcastle, where the general level of the town is very much above that of the wharfs of the harbour, and the waterworks in consequence provided a very tall column of water at the lower levels. Of this he availed himself by applying the pressure so obtained to force a piston along a watertight cylinder, and with a simple multiplying gear the cranes on the quays were made, by the mere turning of a cock, to raise any weight their construction could support. By applying the water-power alternately on both sides of the piston, and acting on a cranked axle—as done in the steam-engine—a water-engine was next invented, capable of exerting any amount of power that could be obtained from the height of the column of water and the amount of supply. When a sufficient head of water is available, or where the work is intermittent, this is certainly one of the most successful applications of water-power yet invented. At Great Grimsby Dock and at Birkenhead pipes are laid under the pavement from a reservoir at the top of a tall tower, to every part of the dock premises. At the foot of every crane, under the piston of every hoist, at every dock-gate, unseen and noiseless the power lies dormant; but a woman's hand applied to a small handle will set in motion a force sufficient to raise a mass weighing fifty or one hundred tons, and either to place it in the hold of a ship, or deposit it in any spot within reach of the arms of the crane. With equal ease the gates of locks 100 feet in width are opened or shut, and the smallest as well as the heaviest works of the dockyard done without a stranger being able to perceive what it is that sets everything in motion."

In speaking of the atmospheric railway, and air as an accumulater and transmitter of power, the reviewer omits to speak of what is now being done in the way of "pneumatic despatch."

Miscellanea.

The New Hotel near the Crystal Palace. The arrangements for the erection of the Prince of Wales Hotel, about to be established, at a cost of nearly 100,000*l.*, by the public company of which Lord Ranelagh is chairman, have advanced so far as the completion of the builder's contract. Mr. J. T. Robinson, of Hull, has been the successful competitor for the contract.

Photographic Waste.—At a recent meeting of the Glasgow Photographic Association, Mr. J. Ewing exhibited some ingots of silver, amounting in value, it is said, to 120*l.*, which he stated had been collected by W. M'Nab in about twelve months from old collodion, printing baths, filter papers, blotting papers, and other refuse. Can it be possible that this was done in one photographic establishment?

Condition of Neath Abbey.—Mr. John Prichard, of Llandaff, draws urgent attention, in the *Cardiff Guardian*, to the wretched state of the ruins of Neath Abbey, and suggests that something should be done, before the winter sets in, to protect them from further decay, by such means as asphalt or grout, and masonry, clearing of roof, and drainage of surface-water from the precincts. He also advises a subsequent restoration of levels and removal of *débris*, with search for wall-foundations, and the preparation of careful plans and elevations of the existing buildings. Of course subscriptions are wanted for both purposes.

Working Men's Clubs: Progress in Leeds. At the working men's club in Leeds, established in June, 1861, with about fifty members, there are now usually each evening 200 chess and draught players, 300 or 400 readers, and from 800 to 1,200 in the lecture-hall.

The Chatham Memorial to Prince Albert. A costly drinking fountain, erected on a site given by the Government in the Military-road, Chatham, and built from funds raised by public subscription among the inhabitants of that town, has been formally opened. The foundation is constructed of dark marble and Caen stone, relieved by Kentish rag. On a shield in front are the arms of the Prince Consort. A procession of the various public bodies of Chatham, the inhabitants of the town, and the members of the several benefit societies, accompanied by the Royal Marine Light Infantry, the dockyard police, and other bands, walked in procession to the fountain, which was uncovered by Lieutenant-General Sir J. M. F. Smith, K.H., the member for the borough, in the presence of a vast crowd of spectators. The following is the inscription on the fountain, which is erected from the designs of Mr. G. E. Street:—"This fountain was erected to the memory of Albert, Prince Consort, at the expense of James Budden, Esq., and other inhabitants of the parish of Chatham, A.D. 1863."

Town Drainage of Aberystwith.—A report by the committee appointed by the local Board of Commissioners for the purpose of carrying out the general drainage of the town, as recommended by the late Mr. George Bush, and the widening and improving of the Marine-terrace, has been submitted to the board. The report advises that the works recommended by the committee be, as far as possible, executed by contract, under proper superintendence, and commenced and carried on with the least possible delay, so as to ensure their being completed before next summer. The committee having made another recommendation that a skilled engineer should be employed by the commissioners in carrying on these works, and having promised a supplementary report on the comparative advantages of using glazed earthenware pipes in preference to bricks, conclude by recommending Mr. Theodore Paul, C.E., to the board, as a competent gentleman to undertake the engineering portion of the work.

Turbines on a small Scale for Domestic and Trade Use.—In a house at Manchester, a water-wheel 4 feet in diameter, consuming fifteen gallons of high-pressure water per minute, formerly employed to work the bellows of an organ in the drawing-room over the cellar wherein the water-power was produced, has been replaced, says the local *Guardian*, by Mr. Schiele, with a turbine only 1¼ inch in diameter, with a 3-inch case 1¼ inch wide, supplied by a ⅜-inch pipe, and consuming less than a gallon of water per minute. By a simple regulator the organist can supply his instrument with the required wind by simply giving a turn to a handle near the organ. By availing themselves of the ample supply of high-pressure water in Manchester and other towns (except as in our antiquated capital) "all persons using machines requiring a small amount of power," adds our authority, "now appear to have supplied to them by this invention the means of working their machines with no trouble and at a trifling cost; while at the same time this kind of turbine appears to be equally well adapted for turning large mills and works, even when they require several hundreds of horses' power."

Roads and Civilization.—From the Roman times, and much farther than that back, the roadmaker has been the great agent of civilization, and the means of national prosperity. As with the old roads so it is with the iron rails, and a remarkable instance of this is shown in the fifteenth report of the Scinde Railway Company, which has been recently published. It says that four or five years ago not more than 2,000 camels came down yearly from the border counties of Central Asia, bringing to Kurrachee dried fruits, dyes, and other products of the hills. During the year ending 30th June, 1862, 4,000 camels brought, besides dried fruits and other smaller articles, a considerable quantity of wool; and during nine months of the year ending 30th June, 1863, 7,000 camels have come down, bringing only about 4,000 packages of smaller articles, but 10,000 bales of wool. This wool was sold for 135,000*l.*, of which about 90,000*l.* was taken back in English piece goods, and the remainder in cash. This is the first year the hill-men have taken back money, and they are now fully aware of the value of their produce. It is expected that next year 10,000 camels will arrive with wool.

A PROPOSED FORESTERS' HALL IN PORTSMOUTH.—It is proposed by the Foresters of the Portsmouth district to build for their accommodation a hall capable of seating about 3,000 persons, also rooms in which the Foresters and other friendly societies in the locality might hold their meetings, with schoolrooms attached. There is reason, it seems, to believe that the required capital will be soon obtained.

WORKINGTON.—Nearly all the intelligent inhabitants of the town, it is expected, are in favour of the adoption of the Local Government or Health of Towns Act, and it is hoped that the trustees, who are unanimous in its favour, will be empowered by a proper requisition to take the necessary steps for its adoption in its integrity. The introduction of water has proved the greatest blessing ever conferred upon the town, and as a pecuniary investment its results have been not less satisfactory to the shareholders than to the public at large in a sanitary point of view.

MINERAL WEALTH OF THE COUNTRY.—The "Mineral Statistics of the United Kingdom of Great Britain and Ireland for 1862, by Robert Hunt, F.R.S., Keeper of Mining Records," has just been issued in a printed form at the Stationery Office. From this it appears that the total results are as follows for the year 1862:—

Metals Produced from British Minerals and Coals.

Gold	5,269 oz.		£20,396 value.
Tin	8,479 tons		983,216 ,,
Copper	14,843 ,,		1,493,241 ,,
Lead	69,031 ,,		1,436,345 ,,
Silver	686,123 oz.		189,041 ,,
Zinc	2,151 tons		50,548 ,,
Iron, pig	3,943,469 ,,		9,358,672 ,,
Other metals, estimated			250,000 ,,
Total value of British metals			£14,281,453
Coals	81,638,338 tons		20,409,584 value
			£34,691,037

Earthy minerals, such as barytes and lime, salt, and the more valuable clays, are estimated at 1,750,000*l.*, and we find, by a return compiled by Mr. Hunt in 1859, that the value of building stones, slates, &c., amounted to 7,954,075*l.* The actual wealth added to the national store, therefore, as obtained from our native rocks, amounts to nearly 45,000,000*l.* sterling.

RAILWAY TRAFFIC.—Some important and interesting railway statistics have been published. It appears, according to our authority, the *Gloucester Chronicle*, that in 1862 the goods traffic reached to 30,256,913 tons, which was a decrease, as compared with 1861, of 381,980 tons; caused, doubtless, by the state of the cotton districts. But while the traffic was less the receipts were more: in 1861 they were 9,423,305*l.*; and in 1862, 9,636,546*l.* Thus while the traffic decreased 1¼ per cent. the receipts rose 2½ per cent. This is attributed to the character of the goods conveyed to the International Exhibition. The whole coal supply of the metropolis in 1860 was five millions of tons, of which 3,500,000 tons were sea-borne, and 1,500,000 tons were brought by railway. The minerals carried by the railways of the United Kingdom in the same year exceeded sixty millions of tons. The great bulk of this enormous traffic must have been coal. The mineral trade now conducted by railway companies has exceeded in the present year 63,000,000 tons, representing a value, speaking in round numbers, of 31,500,000*l.* The gross receipts for this traffic were 4,957,406*l.*, the average cost being 1s. 6¼d. per ton.

THE PROPOSED NEW GAOL FOR SALFORD.—The committee appointed at the Salford Sessions in April, 1862, to take on lease three plots of land adjoining the Assize Courts, as the site for the new gaol, reported that they had difficulty in obtaining one of the plots, and had submitted to the Secretary of State another plan, so re-arranged as to admit of the gaol being built on the smaller area, giving the same amount of present accommodation as the original design, though not capable of quite so large a future extension. The Secretary of State having approved of the plan, the committee recommended that the gaol be constructed in accordance therewith. Tenders had been advertised for, and the committee recommended that the following be accepted:—Samuel Bramall, Hulme, general contract, 86,519*l.* 19s. 4d.; G. N. Haden & Son, Trowbridge, ventilating and warming, 6,030*l.* 6s.; J. Jeffrey, Manchester, for gas service, 1,400*l.*, and for water service, 2,873*l.* 10s.; J. Heywood, jun., Derby, ironwork for galleries and other internal fittings, 3,863*l.* 0s. 6d.; Chas. Smith, Birmingham, bells, 629*l.* 12s.; Hadfield & Atkins, Cheetham, for various descriptions of bricks, 800*l.* The report has been adopted at the recent Sessions.

THE COST OF TAKING THE CENSUS.—A parliamentary return shows that the expense incurred at the central office, by taking the census for England and Wales in 1861, was 95,720*l.* In 1851 it was 93,132*l.* and in 1841 was 86,727*l.* But the cost per 1,000 of the population was, in 1861, 4*l.* 15s. 5d.; in 1851, 5*l.* 4s.; and in 1841, 5*l.* 0s. 9d. The grant made by Parliament for the census of 1861 was 105,000*l.*, of which 9,280*l.* remain a balance in hand.

AUCTIONEERS' COMMISSION.—A mortgagee cannot, when he advances his money, stipulate for an advantage not naturally arising out of his mortgage. Therefore, where auctioneers, at the time of advancing their money upon mortgage, stipulated for an authority to conduct the sale of the estate, and for a commission of 5*l.* per cent. upon the amount of the purchase-money, over and above the repayment of principal and interest, it was held by the Master of the Rolls that the charge for commission was not covered by the security. This was the case of *Broad* v. *Self's*, in which his Honour said it was not competent for a person under colour of a mortgage to stipulate for a distinct collateral advantage.

THE MIDDLE-LEVEL MAIN SEWER.—On the 27th of October, the vestrymen and other officials of the parish of Clerkenwell were afforded an opportunity of inspecting the Middle-Level Main Sewer, connected with the main drainage of the metropolis. The visitors having assembled in St. John's-square, descended into the sewer, which is there 30 feet below the surface, and 9 feet in diameter. They then went eastward as far as the City-road, the sewer being lighted up for the occasion by candles stuck in the side walls. On the route were seen the ventilating shafts and the inlets placed for the reception of the sewage of the district. On the return of the party a *déjeûner* was provided in the sewer at the cost of the contractors.

THE EXCAVATIONS OF ROMAN REMAINS AT WYCOMBE.—The committee who have been engaged in excavations of the Roman site, at Wycombe, near Andoversford, invite the attention of antiquaries, and especially of those of the county of Gloucester, to this subject. They state that the field in question forms an area of more than 32 acres, three-fourths of which, in all probability, are covered with Roman remains. Some of the walls and foundations are of the best cut stone work: others are less carefully built: some are 2 feet 4 inches thick, others 18 to 20 inches: some of the pavements are of hewn stone, the greater number of them planking, or gravel concrete. No tessellated pavements have yet been discovered, but hypocaust tiles have been found. Various interesting relics have been discovered in the prosecution of the works. It is considered evident that Wycombe and the adjacent land have been the site of a large Roman military station, with a town or village attached to it, and situate at the convergence, near Andoversford, of an ancient road from Cirencester to Cleeve Hill, with others leading to Campden, Stow, and Gloucester. The wish of the proprietor of the land is, that whatever of value is found shall be placed in a museum in the county. Subscriptions will be received, in furtherance of the work, at the several branches of the County of Gloucester Bank.

THE LEEDS NEW INFIRMARY.—Before beginning the works new arrangements as to means have been made. The circumstances were thus detailed, at a recent meeting of the trustees, by Mr. Kitson: He said that the contracts already entered into amounted to 64,750*l.*; the preliminary expenses had been 682*l.*; the amount paid for the original site 18,000*l.*; and for additional land, a considerable portion of which would be resold, 14,000*l.*;—together, 32,516*l.* From this they deducted 10,500*l.* for the resale of land, leaving the cost of the site 22,000*l.* The contract for the building was 64,750*l.*; the estimated cost of enclosing and of alterations, 2,500*l*; of washhouses and out-offices, 3,000*l.*; of warming, furnishing, &c., 5,000*l.*; and architect's commission and the clerk of works, 4,000*l.*; making a total of 101,948*l.* They therefore now asked for authority to expend more than double the sum originally contemplated. As to the "ways and means," the subscriptions, including the amount specially for endowment, were 62,752*l*, and from the sale of the present Infirmary they expected to realise 30,000*l.*, which would leave a deficiency of 9,000*l.* This it was confidently believed would be timeously provided for by farther subscriptions. It was proposed to mortgage the new building for 15,000*l.*; but it was resolved rather to borrow money on the land not required for the Infirmary.

DRINKING-FOUNTAIN MOVEMENT.—Dr. Westall, of Croydon, has presented to that town a polished grey granite drinking-fountain, which is placed in front of the Public Hall.

NEW CHURCH AT PADDINGTON.—A new church is to be erected in the north part of the parish of Holy Trinity, Paddington; and an eligible site has been secured at the east end of Woodchester-street, and near the west end of Delamere-terrace and the Paddington Canal.

MONUMENTAL.—It was some time ago resolved to erect at Halifax an equestrian statue of the late Prince Consort. The commission to execute the work has been given to Mr. Thorneycroft, of London, the cost to be 1,300 guineas. Several members of the Royal family have, it is stated, seen and expressed their approval of the model. ——A committee has been formed at Luino, in Lombardy, for the purpose of erecting a grand monument to Garibaldi. It is to consist of a colossal statue.

THE LINSEED OIL NUISANCE.—Many persons fancy from not hearing the loud complaints of some time back, that the tricks of trade have ceased. It is a delusion. The evil is unchecked. If this state of things is to continue long, we shall be obliged to petition Parliament when it re-opens. It is simply ridiculous to think that we are to be fooled for ever by dishonest manufacturers. If we get nothing by petitioning Parliament, which is very likely, the best plan, in my opinion, is to set up a "Linseed Oil Company." We should thus be supplied in time with a genuine article, of course by paying extra for it; but the English public would rather pay a little more and have less to do with the unpleasant sticking now so common.—A FRIEND.

JACKSON, FELL, & JOPLING *v.* THE ROMAN RAILWAY COMPANY.—The Tribunal of Commerce of the Seine has just given judgment in an action brought by Messrs. Jackson, Fell, & Jopling, English engineers, against the Roman Railway Company, to recover damages for breach of contract, which were laid at 600,000fr. In 1837 the plaintiffs were competing with the Caza Valdez Company (afterwards absorbed in the Roman Railway Company) for the concession of the line from Bologna to Ancona, but withdrew from the competition when promised the contract for executing the works of the line; and as this promise was not realised, they obtained as an indemnity 500,000fr. in cash, and the promise of the works of the line from Ravenna to Porto-Corsini, which the company hoped to obtain from the Pontifical Government, then still in possession of Romagna. After that arrangement, these provinces fell under the sovereignty of the King of Italy, and his Government granted the line from Ravenna to Porto-Corsini to the Roman Company, in exchange for the Ferrara line, which the Government had transferred to the Lombard Company. In consequence of these changes, the Roman Company refused to fulfil their promise to the plaintiffs, and confided the execution of the Ravenna line to their general contractor, M. Briot, and hence the present proceedings. The Tribunal, after hearing counsel, decided that the plaintiffs had clearly established the breach of contract, and were entitled to damages, which it estimated at 80,000fr., and accordingly condemned the defendants to pay that sum to the plaintiffs, with all costs of suit.

TENDERS.

For a house at Tufnell Park, Holloway, for Mr. George Mee. Mr. George Truefitt, architect:—

Warne (accepted)	£1,652 0 0

For erection of temporary buildings for Birmingham Dog Show. Materials the property of, and to be removed by, the contractor. Mr. Edward Holmes, architect:—

Webb & Son	£449 0 0
Barnsley & Son	430 0 0
Wilson	420 0 0
Smith, Brothers	400 0 0
Cresswell	390 0 0
Branson & Murray	370 0 0
Matthews	330 0 0
Horsley, Brothers (accepted)	277 0 0

For alterations and additions to the City Music Hall, exclusive of repairs, painting, &c. Mr. William Paice, architect. Quantities supplied by Messrs. Oliver & Paice —

Hack & Son	£377 0 0
Richards	374 0 0
Percey	370 0 0
Child & Son	260 0 0
Ring	248 0 0
Ramsey	233 12 0

For Surrey County Schools, Cranley:—

Norris	£9,600 0 0
Sharpington & Cole	9,553 0 0
Lawrence	8,997 0 0
Futcher	8,000 0 0

For paving works in Lansdowne-road, Lee, for Plumstead District Board of Works. Mr. Francis F. Thorne, surveyor :—

Greaves	£111 5 0
Rutty	107 10 0
Hobbs	106 0 0
Holliss	99 15 5

For new board-room building and offices, at Old Charlton, for the Plumstead District Board of Works :—

Drake	£3,400 0 0
Thompson	3,326 0 0
Simms	3,300 0 0
Mills	3,018 0 0
Marsland & Son	2,889 0 0
Tongue	2,860 0 0
Myers & Son	2,782 0 0
Stevenson	2,749 0 0
Wardle	2,700 0 0
Kirk	2,647 0 0

For new brick sewer, 39 inches by 30 inches, and 2,856 feet in length, in Eltham-road, for the Plumstead District Board of Works :—

Kirk	£2,246 0 0
Sharon & Co.	2,099 0 0
Hill, Keddell, & Robinson	1,959 0 0
Hartland & Bloomfield	1,863 0 0
Kent	1,850 0 0
Mann	1,789 0 0
Haynes	1,726 0 0
Hubbard	1,561 0 0

For repairs, alterations, and fittings for Metropolitan and Provincial Bank Company, 86, Oxford-street. Quantities supplied :—

Jackson & Graham	£1,206 0 0
Goodwin	1,067 5 6
Patman & Fotheringham	1,056 0 0
Simms	1,050 0 0
George	872 15 0

For the enlargement of Lincolnshire County Asylum :—

Tims & Son	£14,360 0 0
Wallis & Son	14,328 0 0
Craven, Brothers	13,900 0 0
Pattinson, Brothers	13,535 0 0
Huddleston	12,463 0 0
Ward	12,038 0 0
Warburton, Bros. (accepted)	11,750 0 0

For New Church of Immanuel, Broad-street, Birmingham. Mr. Edward Holmes, architect. Quantities supplied by Messrs. Cox & Mansell :—

Smith, Brothers	£2,850 0 0
Briggs & Son	2,596 0 0
Partridge	2,490 0 0
Matthews	2,353 0 0
Wilson (accepted)	2,300 0 0

For new national schools at Oldbury. Mr. Edward Holmes, architect. Quantities supplied by Messrs. Cox & Mansell :—

Butler & Marsh	£2,078 0 0
Jones	2,050 0 0
Hardwick	1,989 0 0
Edwards	1,972 0 0
Partridge	1,900 0 0
Matthews	1,899 0 0

JOHN MURRAY, Albemarle Street.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo. price 8s neatly bound.

London: published by T. KELLY, Paternoster row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Edition in the press, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET MAKING, Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten parts at 3s or in boards, 36s; containing upwards of 120 Steel Plates, and numerous Woodcut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the Use of Workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 36s.; containing upwards of Ninety Steel Plates and Numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE: containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Direction for Building, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 38s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts, at 3s or 32s. boards

6. THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 32s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling, including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HIGGINS, Esq. Accompanied by actual Specimens of Hand-Brush Graining and Marbling. Ten Parts, at 3s.; or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1839, of the Encyclopædia. The inventions and discoveries recently made have engaged the sedulous attention of the Editor; for, as the value of each was tested by experience a description was accordingly prepared. By the selection of new articles, and care in the revisal of all others, this edition has now become systematically enriched; so that it may be received as fairly and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo volumes, cloth lettered, price 30s.

THE QUARTERLY REVIEW, No. CCXXVIII. is published THIS DAY.

GEORGE JENNINGS,

Sanitary and Engineering Depôt, Palace Wharf, Stangate Lambeth S.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.

ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronised by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have exclusively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their roofs. The original works where the above roofing is made are F. McNEILL & CO.'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

VICTORIA MARBLE WORKS,
38, LOWER BELGRAVE PLACE, adjoining the Victoria Railway Station, and at Commercial-road, Pimlico, London.
JOHN WREN
Begs to inform Architects, Sculptors, Builders, &c. he has OPENED the above extensive Premises with commodious SHOWROOMS, well stocked with CHIMNEY-PIECES of the most modern designs and superior workmanship, and at the lowest possible prices.
N.B.—Estimates given. Country and foreign orders executed with promptness and personal attention.

SERPENTINE,
large size and great variety,
EQUAL TO GRANITE IN DURABILITY;

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Saville-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the construction and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales. SLABS and CISTERNS delivered at any station in quantities of not less than five tons, from their depôts, Bangor, Garston, Saltney, Chester, and Gloucester.
Prices forwarded and estimates given on application.
1, BOLD TERRACE, CHESTER.

WHITE and RED SUFFOLK FACING
BRICKS and other KILN GOODS.
By Messrs. Allen & Co. Ballingdon, near Sudbury.

The YELLOW and PALE MALM CUTTERS and FACING BRICKS By Messrs. Caleb Hitch & Co. Ware, Herts.

The YELLOW and PALE MALM CUTTERS and FACING BRICKS SEWER PAVIORS, and BILLINGSGATE COLOURED STOCKS, from the Fields at Canvey Island, Shoeburyness, and Little Wakering, Essex.

The entire MAKE of BRICKS by Mr. William Lugater, of the Upper and Lower Halstow Fields; by Messrs. J. Butcher & Son, of Otterham Quay and Lower Rainham; and also by Messrs. J. & G. Parker, of Wickham, near Strood, Kent.

The MANUFACTURE of BLUE VITRIFIED SEWERAGE BRICKS, by Mr. W. Gilbert, of Tipton, near Dudley; and Messrs. Taylor & Co. of Canning's, near Walsall, Staffordshire.

The BALLINGDON DEEP BLACK RUBBING and BUILDING BRICKS, and the CHALFONT and BALLINGDON DARK and BRIGHT RED RUBBERS.

COWLEY, KENT, and ESSEX BRICKS,
IN ANY QUANTITIES, BY BARGE ALONGSIDE.
JOHN and WM. EASTWOOD, WELLINGTON WHARF, Belvedere-road, Lambeth; and Kent-road Bridge, } SOLE CONSIGNEES.
The usual commission allowed to merchants of the trade.
N.B.—Every Description of the Building Goods of the Trade always in Stock.

BURHAM BRICK, LIME, and CEMENT COMPANY, BURHAM WHARF, BELVIDERE-ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE, GAULT BRICKS, TILES, POTTERY, DRAIN-PIPES, GREY STONE LIME, PORTLAND and other CEMENTS, and BUILDING MATERIALS of all descriptions. Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 30 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster.

WOOLPIT, SUFFOLK.
WHITE and RED FACING BRICKS, and other Kiln Goods, at moderate prices.—Samples at Mr. ALLEN'S, 7, Great Smith-street, Westminster; or from Mr. GAWSTON STUTER, at the Works.—See R. G. BURNELL'S Report on Building Materials in "Mackenzie's Record of International Exhibition," p. 77.

MONEY.—IMMEDIATE CASH
ADVANCES MADE ON
FREEHOLD, LEASEHOLD, and COPYHOLD PROPERTY
TIMBER, WINE, and SPIRIT WARRANTS.
BANKRUPTS' and INSOLVENTS' CASES CONDUCTED.
Balance-sheets Prepared, and Meetings of Creditors Convened
Mr. RICHARD CRISSELL, ACCOUNTANT and BUSINESS AGENT,
17, Moorgate-street, Bank, London.

MONEY on FREEHOLD and LEASE- HOLD PROPERTY, by the
MUTUAL LOAN FUND ASSOCIATION
(Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 10l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

POLONCEAU and SEYSSEL ASPHALTE.
ESTABLISHED  1838
For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of pores preventing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.
Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE of WIGHT:—"Several testimonials" "March 19th, 1862.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other parties have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,

CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, 14-in. PIERS, FOR £6.

JAMES W. TYLER, CONTRACTOR FOR
DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,
ON IMPROVED PRINCIPLES.
12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.
Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England
Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.
Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.
This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

JUROR—Class XXX.
INTERNATIONAL EXHIBITION
1862.

DESACHY'S FIBROUS PLASTER.
GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.
It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c., for the linings of walls and ceilings, and for all purposes of ornamental plaster.
The advantages are great. It is of great Lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made. It has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.
SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.
DESIGNS MADE FOR ANY WORKS.
LITHOGRAPHED DESIGNS OF CEILING FLOWERS, &c. SENT FREE ON APPLICATION.

FOR PRICES, SEE LAST WEEK'S ADVERTISEMENT.

BARTLETT, BROTHERS, & CO.
DEVONSHIRE WHARF, CAMDEN TOWN, N.W.
PATENT INDURATING SOLUTIONS,
For the Preservation of Stone, Cement, &c.;
PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, &c.
FIRE-PROOF VARNISH,
For Internal Wood Work, Roofs, and Church Work generally. This Varnish renders Wood Uninflammable, and Preserves it from Decay.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.
39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.
PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied as readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information apply to the Manager of the Company, Mr DUDLEY, Architect, as above.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is cheaper than White Lead. It does not change colour with the Sulphuretted Hydrogen of the atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

INTERNATIONAL EXHIBITION, 1862. CLASS 10, No. 2268.

TO BRICKMAKERS
LAND TO LET, for Brickmaking purposes, near the Victoria Docks. Address, E. L. 41, Norfolk street Strand.

THE CLIFF POTTERIES, Kent.—TO BE LET, or the LEASE to be SOLD, of the above POTTERIES, which are situate about three miles from the Higham station, eight miles from Gravesend, and five miles from Strood; also near the river, with convenient wharfage. The property comprises extensive workhouses premises, with ground, first and second stories, and are fitted with six large Kilns, one Horse steam engine and boiler, two Pug mills, two sand mills, with shafting, &c. For terms, &c. apply to Mr. MURRELL, Surveyor and Auctioneer, 1, Walbrook, Mansion House.

BEAUTIFUL PROPERTY on the RIVER TWEED for SALE.—The HOUSE and PROPERTY of ROSEBANK, upon the River Tweed, most delightfully situate below the town of Kelso, N.B. Lately brought to the great Fort and Novelist Sir Walter Scott, But who passed some of the happiest days of his youth on this beautiful spot, and the room in which he lived is now at present as he seen overlooking the river. The Land, which is of excellent quality, and nowhere upwards of twenty two acres or thereby, has a frontage of a quarter of a mile along the noble river Tweed, which at here seen at its greatest beauty. The bank is exquisitely wooded with fine old timber, and pleasure walks extend all along the margin of the river. Few places in Scotland possess more picturesque beauty. The purchaser will have the right to the fine Trout Fishing in that, and out of the bank at the lower end which bounds the property, and Salmon Fishing, to be rented in the immediate vicinity. The property situate in sporting country, where shooting can be obtained, within an easy distance of the seats of the Duke of Buccleuch and Earl of Wemyss & Hamilton.
The house is in good repair, and contains dining room, drawing-room, library, housekeeper's room, four or five bed, two dressing rooms, two attic rooms, water-closet, kitchen, and other conveniences. The offices consist of stables, coach house, washing house, cow house, barn, &c. The garden is well stocked with wall and standard fruit trees, and is early and productive. Attached to the property is an excellent right of pasturage, and other rights and privileges. The estate is finely situated for those who prefer to the close confinement of a town, being Abbotsford, Melrose Abbey, Dryburgh Abbey, Jedburgh Abbey, Kelso Abbey, &c., together with its great natural beauty, its sporting facilities, and its proximity to the town of Kelso, which makes it such an eligible site for villas, not to mention the number of Noblemen's and gentlemen's seats with which the neighborhood abounds, no more advantageously be met with. The property will be EXPOSED to SALE, by PUBLIC AUCTION (if not previously disposed of by Private Sale), at the SALE ROOMS of Messrs. CAY & BLAKE, 104, George street, Edinburgh, on TUESDAY, 1st DECEMBER, 1863, at ONE o'clock afternoon, at the extremely low upset price of £3,000. For further particulars apply to JAMES TAIT, W.S., Kelso, who will show the title deeds and articles of roup; or to Messrs. SCOTT, MONCRIEFF, & DALGETTY, W.S., 17, Duke-street, Edinburgh.

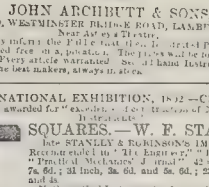
SYDENHAM HILL.—LAND TO BE LET for BUILDING: 470 feet frontage, average 50 to feet deep. Beautiful site, with extensive prospects, and fronting a high road; close to Stations, railway, and omnibus. Ten minutes walk of the Crystal Palace. May be taken in one, two, or three plots, for detached Residences. Particulars, apply personally to Mr. HENRY DAWSON, Architect, 16, Finsbury-place South, E.C.

ELIGIBLE FREEHOLD BUILDING LAND for SALE, by PRIVATE CONTRACT, in the free and land tax exempt Hamlet of Aldersbrook, near Cross-on, Surrey, New Ba Let, Herts, close to the Railway Station, and Grange Park, Leyton, Essex. The purchase-money may be paid by a deposit of 10 per cent and the balance in nine years, by half-yearly instalments, with interest at 5 per cent, and the option of paying the whole at any time without notice.—For particulars and plans, apply to the Auctioneer, 14, Moorgate street, London, E.C.

TO ARCHITECTS and CIVIL ENGINEERS.—A first-rate POSITION can be obtained in Manchester, as an Offshoot or Branch from London, in the above BUSINESS. A suite of OFFICES, Fixtures, and Lease, valued at 200l. One-half may be worked out by the new comers.—Apply to Mr. WM. SANKE, 38, King William-street, London, E.C.

THE PORTMAN BARRACKS BUILDING SITE contains nearly two acres, and is admirably adapted for a hotel or other public company.—Plans and particulars may be obtained from Mr. BARLOW, 11, Portman-street, W.

SPACIOUS MANUFACTURING PREMISES, with Steam Power, situate at Redbridge, near Southampton, adjoining the Southampton Waters and the London and South Western Railway.—TO BE LET, for a long term if required, an extensive PILE of BUILDINGS, most substantially built, three stories high, and measuring in length 160 feet, by an average width of 44 feet, with an L-house and store over the same, each 36 feet by 26 feet, fifty engine-house, and chimney-shaft, together with 40 horse power condensing steam-engine and boiler, as well as all necessary driving gear, large inclosed shed, yard, counting houses and premises, all lighted with gas; adapted for flour or nut yard mills, and many other manufacturing purposes. For terms and to treat apply to Mr. H WITHERS, Redbridge, near Southampton.



BORDEAN LIME WORKS, near Petersfield.—TO BE LET, from the 1st of January, 1864, the above-named valuable LIME WORKS, situate on the Turnpike road, two miles and a half from the Petersfield station on the Direct Portsmouth Railway. The Works are now in full burning and capable of being very much extended. The lime is the well known Petersfield lime and is the only kind allowed to be used by the contractors for the Defence Works now in progress at Portsmouth and the neighbourhood, where as well as in the town of Portsmouth there is a great demand for lime.—For particulars apply to Mr. ADAMS, Estate Agent and Surveyor, 1, Lancaster-place, Strand, London; and Petersfield, Hants.

Canons' Marsh, Bristol, November 2nd, 1863.

TO BUILDERS, DECORATORS, and OTHERS.—SALE of PAPER-HANGINGS, Chimney-pieces, Water-closets, and other Fittings, deserving the attention of all who are interested in House Property.

MR. EDWIN WHITE will SELL by AUCTION, at his ROOMS, 12, Holborn-bars, and 1, Castle-street, Holborn, on TUESDAY next at ONE, nearly 10,000 rolls English and French PAPER-HANGINGS, in great variety, about 200 white and coloured marble chimney-pieces, of every kind; 30 excellent water-closets, &c.—View and catalogues day prior and morning of sale.

UPPER CLAPTON, Middlesex.—Eligible Freehold Building Land.

MR. WHITINGHAM is instructed to SELL by AUCTION, at the MART, London, on MONDAY, 30th NOVEMBER, 1863, at TWELVE for ONE o'clock, fifty seven Lots of eligible FREEHOLD BUILDING LAND, free of tithe and land tax, situate in the new roads leading from Upper Clapton to Hackney-road, Stoke Newington, close to the Hackney Downs, and within half an hour's ride of the City. Nine tenths of the purchase-money may remain on mortgage or contract at 5 per cent, to be paid in nine years by half-yearly instalments, but the whole or any part of the balance may be paid off at any time with a rebate. Plots, plans, and conditions of sale may be obtained (ten days before the sale) at the Old King's Head, Upper Clapton; of Messrs. RUSSELL & DAVIES, 59, Coleman-street, London, E.C.; of the Auctioneer, 14, Moorgate-street, London, E.C.; of the Foreman on the estate; and at the Place of Sale.

WEST TISTED, five miles from Alton, Hants.—To TIMBER MERCHANTS, RAILWAY CONTRACTORS, and OTHERS.—SALE of splendid LARCH and BEECH TIMBER, UNDERWOOD, and RAVINS

MR. ELFORD has been honoured with Instructions from Sir Alfred J. Doughty Tichbourne, Bart. to SELL by AUCTION at the NEW INN, West Tisted, on THURSDAY, the 12th, and FRIDAY, the 13th of NOVEMBER, 1863, 4,500 fine LARCH TREES, standing in New Copse, the Hangers, and the Warren; 22 acres of UNDERWOOD, and 20,000 LARCH RAVINS. The Lunch will be all ready, and sold in lots of 20 in each lot, on Thursday, the 12th. The Second Day's Sale will commence with 240 fine Beech Trees, standing in New Coppice, near Colmore Wood, in lots of 20 each, with all the top and lop, containing with 300 very fine trees in the Hangers, two and a half miles from Liss station, and 800 Beeches of smaller size, in the Warren, adjoining the Hangers; two acres of Underwood in New Copse, 12 acres in the Hangers, 5 acres in the Warren, and 2½ of Larch Ravins in Colemore Wood, which, for the convenience of purchasers, will be sold in lots of one each. The Auctioneer can with the greatest confidence recommend this Timber, the larch from its great size and length, and the beech, which from its kind growth is well adapted for machinery and work of a superior class. To apply by letter to Mr. BURRELL, the Agent, at Ecchborne Cottage, Alresford, stating time and where to meet, who will send the proper party to show the different lots; or to the Deputy Agent, Mr. HEBBARD, at the New Inn, West Tisted. Descriptive catalogues, with full particulars, will be ready a fortnight prior to the Sale, and will be sent by post on application to the Auctioneer, Basingstoke. Lunch will be provided at Twelve, and the Sale will commence each day at ONE punctually.

TO TIMBER MERCHANTS, CONTRACTORS, BUILDERS, CARPENTERS, JOINERS, and OTHERS.—VICTORIA WHARF and SAW MILLS, Victoria-road, on the Surrey Canal, nearly opposite the Victualling-yard, Deptford, and near the Deptford Station on the Greenwich Railway.

BY Order of the Secretary of State for India in Council.—Notice is hereby given, that TEN JUNIOR APPOINTMENTS in the Engineer Establishment of the Department of Public Works in India will, in the year 1864, be open to PUBLIC COMPETITION.

A Competitive Examination will accordingly be held in this Office in the month of JUNE next. Full printed particulars of the conditions on which Candidates will be admitted to the Examination may be obtained at this Office, on application, either personally or by letter, addressed to the "Under Secretary of State for India," India Office, London, S.W.

India Office, 10th July, 1863.

NOTICE.—LONDON and WESTMINSTER BANK, LAMBETH BRANCH, 34, Mount-Street.—GEORGE TOZER, Local Manager.—The London and Westminster Bank having received notice from the Vestry of the Parish of Lambeth, that the Metropolitan Board of Works have directed that Mount-street, Lambeth, should hereafter be called Westminster-road, and numbered accordingly, hereby give notice, that from and after this date the business of the Lambeth Branch will be carried on at the same premises, but bearing the altered number and name of 91, WESTMINSTER ROAD, S. and all communications connected with that Branch are requested to be so addressed.—By order of the Board,

November 11th, 1863. WM. EWINS, General Manager.

ROYAL INSTITUTE of BRITISH ARCHITECTS, 9, Conduit-street, Hanover-square, W.—VOLUNTARY ARCHITECTURAL EXAMINATION.—The NEXT EXAMINATION will be held on MONDAY, JANUARY 25th, 1864, and the following days of the week. Candidates are requested to deliver their applications and recommendations on or before SATURDAY, DECEMBER 12, 1863. The fees will be as follow:—Class of Proficiency, Two Guineas; Class of Distinction, an extra fee of One Guinea. These Examinations are intended to be held annually, and are open to all British subjects, under certain regulations, copies of which, together with course of examination, list of books recommended, copy of questions used in the last examination, &c. may be obtained, price 1s. each, at the Institute, 9, Conduit-street, Hanover-square, W. The necessary forms to be filled up can be obtained of the Hon. Secretaries.

(Signed) JOHN P. SEDDON, CHARLES FORSTER HAYWARD, } Hon. Secs.

MINING and MINERALOGY.—ROYAL SCHOOL of MINES, Jermyn-street.—Mr. WARRINGTON W. SMYTH, M.A. F.R.S. will commence courses of FORTY LECTURES on MINERALOGY at ONE o'clock, and SIXTY LECTURES on MINING, at HALF PAST THREE o'clock, on THURSDAY, the 19th of NOVEMBER, to be continued on each succeeding Friday, Monday, Tuesday, and Thursday, at the same hours. Fee for each course, £6. TRENHAM REKES, Registrar.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr. TYLER, 12, Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

PROVIDENT INSTITUTION of BUILDERS' FOREMEN and CLERKS of WORKS, 9, Conduit-street, Regent-street.—A DISCUSSION will take place as above on "Professor Donaldson's Lecture," at the next ordinary meeting of members, on WEDNESDAY EVENING, NOVEMBER 18th, when members and friends are earnestly requested to attend. The discussion will be opened by Mr. WHITE.

R. WEBSTER, Librarian.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 73—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

73—74, Bishopsgate-street Within, November, 1863.

COMPETITIONS.

DESIGNS for RAISING HOLBORN VALLEY.—The Improvement Committee of the Corporation of London hereby give notice that the DESIGNS for RAISING HOLBORN VALLEY, and making such alterations and improvements in and adjacent to Holborn-hill and Skinner-street as would conduce to the convenience of the public and to the accommodation of the metropolitan traffic, sent in pursuance to public advertisement, and duly complying with the conditions thereof, will be open for PUBLIC INSPECTION, at the GUILDHALL, from the 12th to the 18th of NOVEMBER instant, both days inclusive.

WOODTHORPE.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.

TENDERS are required for the following Sewage at Chatham Garrison; viz.—

ERECTING QUARTERS for MARRIED SOLDIERS, with OUT-BUILDINGS, &c.

Parties desiring to Tender for the erection of these Works must leave their names at the Office, on or before TUESDAY, the 24th day of NOVEMBER, 1863, and pay the sum of half a guinea for the Bills of Quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Chatham, 10th November, 1863.

BOSHAM MUDLAND, SUSSEX.—RECLAMATION of MUDLAND.—ERECTION of SEA WALL.—To CONTRACTORS and Others.—Notice is hereby given, that it is intended to RECLAIM from the SEA all that tract of MUDLAND, known as BOSHAM CREEK, situate at Bosham, Sussex, and also to restore the Sea Wall or Embankment there situate. The Works are to be performed in accordance with certain Drawings and specifications which may be seen at my Office in and after the 15th NOVEMBER next, and under the direction of JAMES BRUNLEES, Esq. of 5, Victoria-street, Westminster, Civil Engineer. Tenders to be sent to me on or before the 10th day of DECEMBER next.

R. G. RAPER, Chichester, Steward of the Manor and Hundred of Bosham, Sussex.

TO BUILDERS and CONTRACTORS.—Messrs. BURGESS & CO. of Mendip Paper Mills, Wells, Somerset, are desirous of receiving TENDERS for the ERECTION of a new BLEACH HOUSE and other Works. Plans and specification to be seen at the above Works, and Tenders to be forwarded to the Office of the Company not later than MONDAY, NOVEMBER 23rd. The Company do not bind themselves to accept the lowest Tender. By order of the Company, JOHN SULLIVAN, Manager.

CAST-IRON WATER-TANK.—Notice is hereby given, that the Sheerness Local Board of Health are ready to receive TENDERS from persons desirous of contracting with them, for SUPPLYING and FIXING a CAST-IRON WATER-TANK, capable of containing 140,000 gallons, and for PURCHASING about 40 tons of WROUGHT IRON PLATES, now in the possession of the Board. Plans, sections, and specification may be seen at the Office of the Surveyor. Sealed Tenders, indorsed "Tender for Water-Tank," must be delivered at the Office of the Board, before SIX o'clock on the evening of THURSDAY, the 26th day of NOVEMBER, 1863. The Board do not bind themselves to accept the lowest or any Tender. By order of the Sheerness Local Board of Health,

EDWARD FELKIN, Clerk.

Office of the Local Board of Health, Sheerness, November 10th, 1863.

BUILDERS willing to TENDER for the ERECTION of TEN SMALL HOUSES, on the Vauxhall Garden's Estate, can inspect the plans and specification, and obtain full particulars, at the Office of Mr. W. MUMFORD, Architect, &c. 21, Lincoln's-inn-fields.—No pledge is given to accept the lowest or any other Tender.

November 11, 1863.

TENDERS are required for the FORMATION of a NEW ROAD leading out of Hornsey-lane, Islington. Plans and specification at the Office of Mr. J. W. REED, Architect and Surveyor, Lake House, Hornsey-rise, between the hours of TEN and FOUR. Tenders for execution FRIDAY, the 20th instant. The lowest or any Tender not necessarily accepted.

TO SAWYERS and OTHERS.—TENDERS wanted for SAWING about 200 loads of YELLOW PINE, in London. Sizes, 14 inches by 7 inches, and 7 inches by 5 inches, sawn all four sides, ends squared, and lengths as logs will cut. Separate prices for each size per load of resulting cut.—Address, J. S. 4d, Spring-street, Paddington.

CONTRACTS.

WEAR NAVIGATION and SUNDERLAND DOCK ACT, 1859.—To CONTRACTORS.—The River Wear Commissioners are prepared to receive TENDERS for the CONSTRUCTION of a GRAVING DOCK and other Works connected therewith, at the South Docks, Sunderland, in conformity with drawings, specifications, and conditions, which may be seen, and further particulars obtained, upon application to THOMAS MEIK, Esq. C.E. Engineer's Office, Harbour and Dock Works, Sunderland, on and after 9th NOVEMBER, 1863. Tenders, on printed forms, attached to specification, which only will be received, and enclosed under printed covers, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," to be delivered at 19, Fawcett-street, Sunderland, not later than NOON on the 14th of DECEMBER, 1863. Copies of the specifications and conditions, with form of Tender, and of a bill of quantities, prepared for the convenience of Contractors, can be had by parties tendering upon payment of 2l. 2s. The Commissioners do not bind themselves to accept the lowest or any Tender.—By order,

J. S. ROBINSON, Clerk to the Commissioners.

Sunderland, October 28, 1863.

WEAR NAVIGATION and SUNDERLAND DOCK ACT, 1859.—To CONTRACTORS.—The River Wear Commissioners are prepared to receive TENDERS for the CONSTRUCTION of a GRAVING DOCK and other Works connected therewith, at the South Docks, Sunderland, in conformity with drawings, specifications, and conditions, which may be seen, and further particulars obtained, upon application to THOMAS MEIK, Esq. C.E. Engineer's Office, Harbour and Dock Works, Sunderland, on and after 9th NOVEMBER, 1863. Tenders, on printed forms, attached to specification, which only will be received, and enclosed under printed covers, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," to be delivered at 19, Fawcett-street, Sunderland, not later than NOON on the 14th of DECEMBER, 1863. Copies of the specifications and conditions, with form of Tender, and of a bill of quantities, prepared for the convenience of contractors, can be had by parties tendering upon payment of 2l. 2s. The Commissioners do not bind themselves to accept the lowest or any Tender.—By order,

J. S. ROBINSON, Clerk to the Commissioners.

Sunderland, October 28, 1863.

WEAR NAVIGATION and SUNDERLAND DOCK ACT, 1859.—To CONTRACTORS.—The River Wear Commissioners are prepared to receive TENDERS for the CONSTRUCTION of a WROUGHT-IRON CAISSON, for the Entrance of the inner end Graving Dock, at the South Docks, Sunderland, in conformity with drawings, specifications, and conditions, which may be seen, and further particulars obtained, upon application to THOMAS MEIK, Esq. C.E. Engineer's Office, Harbour and Dock Works, Sunderland, on and after 10th NOVEMBER, 1863. Tenders, on printed forms attached to specification, which only will be received, and enclosed under printed covers, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," to be delivered at 19, Fawcett-street, Sunderland, not later than NOON, on the 14th DECEMBER, 1863. Copies of the Specification and Conditions, with Form of Tender, can be had by parties tendering, on payment of 2l. 2s. The Commissioners do not bind themselves to accept the lowest or any Tender.—By order,

J. S. ROBINSON, Clerk to the Commissioners.

Sunderland, October 28, 1863.

WEAR NAVIGATION and SUNDERLAND DOCK ACT, 1859.—To CONTRACTORS.—The River Wear Commissioners are prepared to receive TENDERS for the CONSTRUCTION of a SEA WALL or PIER, and other WORKS in connexion with the North-East Pier at the South Outlet of the South Docks, Sunderland, in conformity with drawings, specification, and conditions, which may be seen, and further particulars obtained, upon application to THOMAS MEIK, Esq. C.E. Engineer's Office, Harbour and Dock Works, Sunderland, on and after 10th NOVEMBER, 1863. Tenders, on printed forms, attached to specification, which only will be received, and enclosed under printed covers, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," to be delivered at 19, Fawcett-street, Sunderland, not later than NOON on the 14th DECEMBER, 1863. Copies of the specification and conditions, with form of Tender, and of a bill of quantities, prepared for the convenience of contractors, can be had by parties tendering upon payment of 2l. 2s. The Commissioners do not bind themselves to accept the lowest or any Tender.—By order,

J. S. ROBINSON, Clerk to the Commissioners.

Sunderland, October 28, 1863.

LONDON and NORTH WESTERN RAILWAY.—To CONTRACTORS and BUILDERS.—The Directors are desirous of receiving TENDERS for the ERECTION of STATION BUILDINGS on the Eccles and Wigan Branch Railway at Worsley, Tyldesley, and Bedford.—Parties desirous of tendering may see the drawings and obtain statements of the quantities, upon application to Mr. WILLIAM BAKER, Engineer, Euston Station, on and after THURSDAY, the 12th inst. between the hours of TEN and FOUR o'clock. Tenders, addressed to the Secretary at the Office, to be sent in on or before WEDNESDAY, the 18th inst. at FOUR p.m. The Directors do not bind themselves to accept the lowest Tender.—By order,

Euston Station, Nov. 4th, 1863. C. E. STEWART, Secretary.

TO BUILDERS.—TENDERS are required for ALTERATIONS and ADDITIONS to PREMISES in the Edgware road, being Nos. 113 to 117, inclusive.—Plans, specification, and drawings may be seen at the Offices of Messrs. LEWIS & ALLBUD, No. 72, Bryanston-place, W., on and after WEDNESDAY next, the 18th inst.—The lowest or any Tender will not necessarily be accepted.

TO WORKING CARPENTERS.

TENDERS wanted for EXECUTING the whole of the CARPENTER and JOINER WORK of a BLOCK of BUILDINGS, at present erecting in Hatherley court, Sydney-buildings, consisting of 84 cot, single, and twenty-four rooms. Tenders to be for labour only. Plans and specifications to be seen at the Temporary Office of Mr. WM. BURNS, C.E. No. 1, Golden-lane, Barbican, E.C.

[*For remainder of Contracts see next Page.*

CONTRACTS.

METROPOLITAN BOARD of WORKS.—THAMES EMBANKMENT, MIDDLESEX SIDE.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Board of Works, hereby give notice that they will meet at the Office of the Board, Spring gardens, S.W. on FRIDAY, the 27th day of NOVEMBER next, at TWELVE o'clock at noon precisely, and will then be prepared to open TENDERS by parties who may be willing to CONTRACT for the CONSTRUCTION, COMPLETING, and MAINTAINING in REPAIR for Twelve calendar months, the following WORKS, that is to say:—A certain intended Embankment Wall, 1,950 feet in length, or thereabouts, with certain Landing places, Steamboat Piers, Sewers, Storm outlets, and other works in connection therewith, situate in and adjacent to the foreshore of the River Thames, on the Middlesex side, between Waterloo Bridge and the eastern end of the Temple gardens. Parties desiring to submit Tenders may, on and after WEDNESDAY, the 11th inst. upon payment of 10s. 6d. obtain plans, sections, specifications, form of Tender, and other particulars on application to Mr. J. W. BAZALGETTE, Engineer of the Board, at the Office, Spring gardens, between the hours of NINE a.m. and FOUR p.m. or on Saturdays between the hours of NINE a.m. and TWO p.m. until THURSDAY, the 26th day of NOVEMBER next. The Tenders are to be addressed to the Clerk of the Board, and must be delivered at the Office before FOUR o'clock on the last mentioned day, and no Tender will be received after that hour. The parties Tendering must be in attendance at the Board at TWELVE o'clock on the day appointed for opening Tenders. The Board do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two or more approved sureties for the due and satisfactory performance of the works.

JOHN POLLARD, Clerk of the Board.

Spring gardens, S.W. October 3, 1863.

TO CONTRACTORS and OTHERS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the CONSTRUCTION of about 982 feet of HALF-BRICK BARREL SEWER, at Roehampton, in the parish of Putney. The specification and plan may be seen, and all further information obtained, on application to Mr. BURLEY, Surveyor, at his Office, Biggs's-row, Putney, between the hours of NINE and FIVE. Tenders are to be sent in, under seal, addressed to the Board, at their Offices, Battersea-rise, by TWELVE o'clock at noon, on WEDNESDAY, the 18th inst. Security will be required for the due execution of the contract. The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District,

ARTHUR ALEX. CORSELLIS, Clerk to the Board.

Battersea-rise, Wandsworth, S.W. November 6, 1863.

TO MASONS and PAVIORS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the SUPPLY and LAYING, complete, of 9-inch YORK PAVING, 4 feet wide, from the boundary of the parish of Streatham, at Mill lane, Brixton-hill, to the Streatham Railway Station, in the Streatham turnpike road. The specification can be seen and all further information obtained on application to Mr. BARBER, Surveyor, at his Office, No. 3, Balham-place, Balham (close to the Balham Railway Station), between the hours of NINE a.m. and ONE p.m. Tenders are to be sent in, under seal, addressed to the Board, at their Offices, Battersea-rise, by TWELVE o'clock at noon on WEDNESDAY, the 18th instant. Security will be required for the due execution of the contract. The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District,

ARTHUR ALEX. CORSELLIS, Clerk to the Board.

Battersea-rise, Wandsworth, S.W. November 6, 1863.

TO PRINTERS and STATIONERS.—The Board of Works for the Wandsworth district are desirous of receiving TENDERS for PRINTING, and the SUPPLY of STATIONERY for ONE YEAR, from Christmas next. Schedules of the articles likely to be required may be seen, and any further information obtained, at the Offices of the Board as below, between the hours of TEN and FOUR.—Tenders are to be sent in under seal to the Board, on or before TUESDAY, the 1st DECEMBER next, endorsed "Tender for ——." The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District,

ARTHUR ALEX. CORSELLIS, Clerk to the Board.

Battersea rise, Wandsworth, S.W. November 7, 1863.

TO STONE MERCHANTS, DRAIN-PIPE MAKERS, MASONS and PAVIORS, CONTRACTORS, and OTHERS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the SUPPLY of BROKEN GUERNSEY GRANITE, and other Stone and Materials, and for the supply of Drain-pipes, in the whole of the District; also for the Execution of Masons' and Paviors' Works, and of the various Jobbing Works, in repairing and making good, to Sewers and Gullies, and for Laying Drain-pipes; also for the Supply of Horses on hire, and for Barge Work, in the Parishes of Battersea, Putney, and Wandsworth; and also for Dusting in the Parishes of Battersea and Putney, and for Dusting and Scavenging in the Parish of Clapham. The Contracts are to be for one year from 31st December next. Separate Tenders are to be sent in for each parish, excepting those for granite and drain-pipes, for each of which one Tender for the whole District must be sent in. The specifications may be seen, and forms of Tender may be obtained, at the Offices of the Board, Battersea Rise, between the hours of TEN and FOUR. Tenders are to be sent in, under seal, to the Board, endorsed "Tender for ——, Parish of ——," on or before TUESDAY, the 1st DECEMBER next. Security will be required for the due performance of the respective Contracts. The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District,

ARTHUR ALEX. CORSELLIS, Clerk to the Board.

Battersea Rise, Wandsworth, S.W. November 7th, 1863.

TO BUILDERS.—The Burial Board for the Parish of St. Margaret, Rochester, are desirous of receiving TENDERS for the ERECTION of TWO CHAPELS, with Bell-tower, Lodge, Entrance gates, Fence walls, &c. Persons desirous of Tendering may see the plans and specifications, and obtain forms of Tender, at the Office of Mr. MARTIN BULMER, Architect, Maidstone, on and after THURSDAY, the 12th day of NOVEMBER. Tenders to be delivered at the Office of the Clerk to the Burial Board, Orange-terrace, Star-hill, Rochester, on or before SIX o'clock p.m. on FRIDAY, the 11th day of DECEMBER next, endorsed "Tender for Cemetery Buildings, &c." The Burial Board do not bind themselves to accept either the lowest or any other Tender; and they will require satisfactory security for the proper performance of the Contract.

THOMAS S. WARNE, Clerk to the Burial Board.

Rochester, November 9, 1863.

TO BUILDERS and OTHERS.—Persons desirous of TENDERING for the ERECTION and COMPLETION of a Proposed New Gaol, at St. Alban's, Herts, with Residence, Boundary Walls, &c. according to Plans, specifications, and conditions prepared by Mr. WILLIAM MARTIN, of Birmingham, Architect, are invited to send their names and residence to me, on or before the 27th day of NOVEMBER instant, for selection, with a view to a restricted competition.

T. H. BOSWORTH, Clerk of the Peace.

Clerk of the Peace's Office, St. Alban's, November 7, 1863.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of New PREMISES for the London and County Bank, in the Rich-street, Winchester, can inspect the plans and specifications at the London and County Bank, Winchester; or at the Offices of the Architect, Mr. FRED. CHANCELLOR, Pastors' Hall, Old Broad-street, London, after the 16th NOVEMBER. The Tenders to be delivered at the Offices of the Architect, before TWELVE o'clock on the 30th of NOVEMBER. The lowest or any Tender will not necessarily be accepted.

Pastors' Hall, Old Broad-street, November 9, 1863.

TO BUILDERS, &c.—Persons desirous of CONTRACTING for the ERECTION of TWO ADDITIONAL WINGS to the North Wales Counties Lunatic Asylum at Denbigh, for 100 patients, can inspect the plans and specification on application to Mr. ROBINSON, Clerk to the Committee of Visitors, at the Office of the Asylum, where they are now ready for inspection. Sealed Tenders to be sent in, addressed to the Chairman of the Committee, by the 14th of DECEMBER next. The contractor will be required to give proper security for the due performance of the work, and the committee do not bind themselves to accept the lowest or any Tender.—By order,

JOHN ROBINSON, Clerk to the Committee of Visitors.

November 11th, 1863.

TO STONE MERCHANTS.—TENDERS wanted for the SUPPLY of YORK STONE STEPS, WINDOW CILLS, LANDINGS &c.—Schedules of quantities will be forwarded, on application to WM. BURNS, C.E. at his Temporary Offices, Golden-lane, Barbican, E.C.

GRAND BANQUETING HALL.—FOR SALE, by PRIVATE TENDER, a GRAND HALL, in the Tudor style of architecture, 50 feet by 40 feet by 35 feet high, with open roof, hammer-beams, &c.; decorated in the most ornate and tasteful manner, and with handsome brass Gothic Chandeliers suspended from hammer-beams; solid parquet floor, of bold design, with deal floor under, supported by trellis iron girders; heating stove, with pipes; brass bit-and-miss ventilating gratings, and all fittings connected therewith, as well as all gas-pipes attached to the Hall. The Hall was erected by the late Marquis of Breadalbane, for the purpose of giving a ball and entertainment to her Majesty the Queen.—For particulars and cards to view, apply between the hours of TEN and FIVE (up to and inclusive of SATURDAY, the 21st day of NOVEMBER instant), at the Offices of Messrs. WIMPERIS & FREEMAN, Architects and Surveyors, 25, Sackville-street, Piccadilly, W.

EDGWARE HIGHWAY BOARD.—The Board of Way Wardens are desirous of receiving TENDERS for RAISING and WIDENING that portion of Aldbarn-lane extending from the Coal-wharf entrance to the Sir Isaac Newton public house, according to a plan and specification prepared, and now deposited for inspection at the Sir Isaac Newton aforesaid. The Tenders to be sent to me, prepaid, on or before the 24th instant, and will be opened by the Board, at the Court House, on the following day, where parties may attend. The Board do not bind themselves to accept the lowest or any Tender.

W. A. TOOTELL, Clerk.

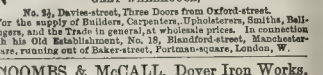
Edgware, N.W. November 11th, 1863.

TO BUILDERS.—TENDERS are required for BUILDING a DWELLING HOUSE, SHOPS, WAREHOUSE, and PREMISES in the Corn Market, Oxford, for Messrs. Grimsby, Hughes, & Dewe, wholesale and retail grocers and provision merchants. Copies of the quantities may be obtained on and after the 20th day of NOVEMBER, by applying to Mr. WILKINSON, Architect, Oxford, and depositing 1l. 1s. which will be returned on receipt of Tender. Tenders to be sent to Mr. WILKINSON, endorsed "Tender for Works in the Corn Market, Oxford," on or before the 3rd day of DECEMBER, 1863. The lowest Tender will not necessarily be accepted.

November 11th, 1863.

TENDERS.—Notice is hereby given that the Hastings Local Board of Health are ready to receive TENDERS from persons desirous of CONTRACTING with them for LAYING WATER MAINS, about 5,000 yards.—The specification may be seen, and further particulars had on application at the Town Clerk's Office, High-street, Hastings, where Tenders, duly signed must be delivered before TEN o'clock on the morning of FRIDAY, the 27th day of NOVEMBER inst. The Local Board do not bind themselves to accept the lowest or any Tender.

ROBERT GROWSE, Town Clerk.



Hastings, November 11, 1863.

FIRE-PROOF CONSTRUCTION.—
FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,
12, YORK BUILDINGS, ADELPHI

CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS;

PATENT MACHINE FOR MORTISING, TENON CUTTING, AND BORING, WITH SELF-FEEDING MOTION.

OFFICE, 26, WATLINGSTREET, CITY, E.C.
where letters and applications for Machinery are to be addressed.

PERIN'S PATENT
FRENCH BAND SAW BLADES.
SAMUEL WORSSAM & CO. having purchased of M. Perin, of Paris, the sole right to import and sell his BAND SAW BLADES throughout the United Kingdom, beg to announce that they are now in a position to supply these Saws from 1-16th of an inch to 8 inches in width, and up to 50 feet in length.
The vast superiority of Perin's Band Saws over any others in point of finish, toughness, durability, and evenness of temper, is now everywhere admitted.
S. W. & CO. keep a large stock of all sizes up to 2 inches wide, from which they can supply orders to any part of the Kingdom within twenty-four hours' notice.
For Price Lists, apply to

BRIGHTON—Messrs. LANGWORTHY & REED, IRONMONGERS.
Windows may also be seen at the Kensington Museum, London.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

NUT PLATE.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)
WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

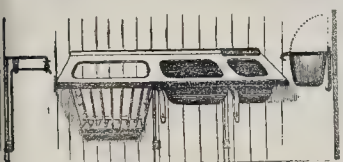
New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

, Illustrations and Particulars sent on application.

WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.



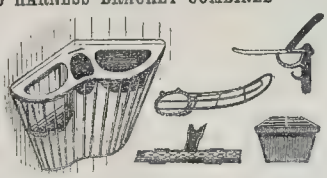
THE PRIZE MEDALS

(LONDON, 1851. PARIS, 1855. LONDON, 1862)
Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.
For progressive and general improvements in
STABLE FITTINGS AND HARNESS BRACKETS.

A stable in a style at the Paris Exhibition,
Patronized by the English and French Governments, as well as by the principal Nobility, Gentry, and Hunting Establishments in the country.
In use at her Majesty's Stables, Aldershott and Balmoral.



COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Watertrough, and Wrought-iron Rack, united to an iron top plate, and forming one complete and useful fixture, having COTTAM'S Patent Double Hinged Rack and Collar Rein attached, which is fixed to the back of the manger, and works with ease and freedom up or down the manger.

COTTAM'S NEW PATENT SEED BOX, an important addition to the above fittings, is very simple in construction, light, and durable, promotes economy, and is economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for the same, is a most essential addition to their fittings; it is very simple in its construction, as can be placed and replaced in an instant, while its advantages, simplicity, and utility in keeping the contents of the bin clean, and regulating the quantity to be taken, is immediately apparent to measure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

...an be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT-IRON VENTILATING BRACKET preserves the shape and allows a free admission of air to the under parts of the saddle.

COTTAM'S IMPROVED SURFACE GUTTER, with perforated moveable cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST IRON SANITARY TRAP, from its improved construction, gives a full water passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE-BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanised, and enamelled. Iron gates, fencing, hurdles, &c.

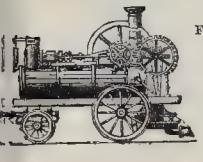
Illustrated Catalogues and Estimates gratis, upon application to
COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.
WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS-ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.
COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.
N.B.—WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.
MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.



They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

BAKERS' OVEN WORK, Forge Backs and Troughs, Rain-water Pipes and Gutters, Sash-Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.
CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

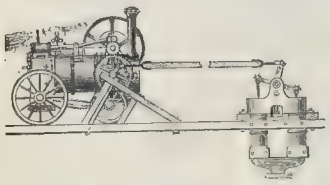
HOBBS, HART, & CO.'S
MACHINE-MADE LOCKS AND STREET-DOOR LATCHES.

These Locks are recommended for all purposes requiring good ordinary security combined with economy of price and durability of wear; as, by means of machinery, a faultless accuracy is arrived at which by hand-labour would be impossible except at a greatly increased cost.

The security of these Locks consists in a series of Levers that have to be raised to unequal positions by the bits of the key before the bolts can pass. These will bear comparison with those at treble their cost.

These Locks are made from two to five levers, and also in suits to differ, with master-keys to pass.

The retail prices for Cabinet purposes is from 2s. to 4s. each; for Room Doors, 4s. to 9s. 6d. each; Street Door Latches, 7s. 6d. to 18s. each.

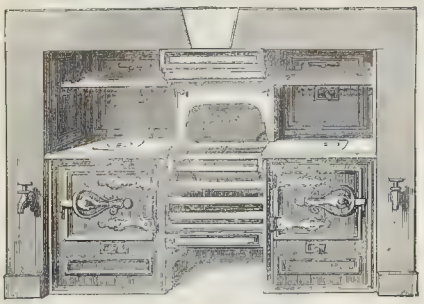


The 2-bolt 4 lever Mortise, with Hob s & Co.'s Patent Follower, price 8s.

HOBBS, HART, & CO.'S PATENT PROTECTOR LOCKS.

300 Guineas were offered in the late Exhibition to any one who could Pick these Locks in thirty days. Their speciality consists in their combining the two essentials of security, viz.—protection against picking, by means of their Patent Moveable Lever Protector, and protection against illicit tampering with the Lock through the key-hole, and also tampering with the key, by means of their Patent Nozzle Protector.

These all-important principles are the special and peculiar features of HOBBS, HART, & CO.'S Patent Locks. These Locks vary in price from 10s. to 50s. each, with solid keys. For prices with changeable keys, see 16-paged Illustrated List of Locks, Iron Door Safes, &c.



HOBBS, HART, & CO. 76, CHEAPSIDE, LONDON, E.C.
Manufactory—BRITANNIA FIELDS, WHARF ROAD, CITY ROAD, N.

CLINTON & OWENS,
LATE B. FOWLER & CO.
ENGINEERS, WHITEFRIARS-STREET, FLEET-STREET, E.C.

ON HIRE OR TO ORDER, a large assortment of PORTABLE ENGINES; SINGLE and DOUBLE PUMPS, from 4-inch to 24-inch barrels, for any depth; also CENTRIFUGAL and OTHER PUMPS, single and double purchase CRABS, PULLEY BLOCKS, and other CONTRACTORS' PLANT.

THE IMPROVED OPEN FIRE KITCHENER,
Manufactured by
WM. OWEN,
PHŒNIX IRON WORKS,
ROTHERHAM,

Possesses all the advantages of the ordinary Close Fire Kitchener, in having excellent Hot Plates on top of Ovens, for boiling, steaming, or stewing, with the additional advantage of having a thoroughly effective and deep Open Fire for roasting purposes.

The Ovens are heated upon Bradley's Patent Principle (under which W. O. possesses the sole right to manufacture), and by which a great economy of fuel is effected.

These Kitcheners are made of all qualities and sizes, suitable for all classes of houses, from the cottage to the mansion; and can be OBTAINED THROUGH ANY IRONMONGER in the UNITED KINGDOM.

WM. OWEN,
GENERAL IRONFOUNDER, STOVE GRATE AND FENDER MANUFACTURER,

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

JOHN DREW,
SHOP FRONT BUILDER,

The Builder.

VOL. XXI.—No. 1084.

"Going Along." Verona "la Degna."

T will not do to quit the Piazza dei Signori, where we left our readers, without a word or two about the Council Hall, attributed to Fra Giocondo, architect and scholar, and the grand campanile on the opposite side of the Piazza. The Council Hall is Early Cinque-cento, so to speak, in style, remarkable for a large amount of elegant sculpture; statues of men belonging to Verona, such as Cornelius Nepos (hated of school-boys), and the poet Catullus; an Annunciation in bronze by Giovanni Campagna, and delicately designed arabasques. The whole is in a very bad state of repair.

Fra Giocondo was a native of the city, but his skill was known out of it. He was called to Paris by Louis XII., where he built the Bridge of Notre Dame. At Treviso he erected
tifications: and in Venice was one who gave a
sign for the Rialto. In Rome he acted with
ffaelle and San Gallo as architect of St. Peter's:
d in that city died.

We called the campanile grand, and though it
ittle more than a square stack of brickwork
nning up to a height called nearly 300 feet,
luding a belfry story, this is the right word for

It strengthens one's soul to look at it.
merous putlog holes left unstopped give variety
the surfaces.

Close by is the most strikingly picturesque spot
Verona,—one of the most striking in all the
rth of Italy,—the Piazza delle Erbe; in other
rds, the vegetable market. This is the open
ace with which, in imitation of the Forum in
me, Verona, like many other cities in Italy,
ovided herself during the Middle Ages for public
remonies and assemblages of the people. The
ildings surrounding it are of different periods:
ne of them were originally decorated in fresco,
ich has at last failed. Near the market cross, the
rm of the Westminster Crimean Monument and
some others, is a small open tribune, on the
, says Gally Knight, of an older building to
ich in republican days the newly-elected Capi-
o del Popolo was led, and there he addressed
people. There is a fountain, too, and a
nolithic pillar of a single block of Verona
rble, put up by one lion (Michael Leo), 1524,
bear another lion, that of St. Mark; Verona
ng then subject to Venice. When we first
sed through the Piazza it was filled with
strian soldiers moving about amongst piles of
tons and other edibles, and making their pur-
ses; none of the inhabitants being at the time
rvable.

One of the buildings at the side was erected as
Exchange, in 1301, by Albert Scaliger; and
er members of the family built the campanile on the same side of the Piazza, a little lower down.

The tombs of these Scaligers, or Della Scalas, known to all who know anything of art or history, will be found at a very short distance off, a wonderful group, but grimy and poorly cared for. They are of marble, but give little indication of so rich a material. Minute description is unnecessary, and would fail to convey a clear idea without sketches. The chief are three in number, and are in memory of Can Francis della Scala, Can Grande (or, as the inscription calls him, *Dux Canis Maximus de la Scala*), who died 1329; Mastino II., who died 1351; and Can Signorio, a brilliant bad man, who died 1375, and was the last prince of the dynasty that had ruled in Verona for 114 years. An altar-tomb, supported on pillars, and surmounted by a canopy, with an equestrian statue on the top, and other sculptured decorations, would serve as a general description of each; but they vary considerably in detail and the extent of the appliances. That of Mastino II., which may have inspired the design for the National Memorial of our Albert the Good, about to be erected in Hyde Park, is the most satisfactory, and the tomb of Can Signorio with statues and tabernacles on carved piers around it, is the most elaborate. The inscription on this last gives the name of the artist as thus,—"*Hoc opus fecit et sculpsit Boninus de Campilione Mediolanensis Diocesis.*" The ironwork enclosure consists of small open quatrefoils, with the *scala* or ladder in the centre of each, an armorial bearing seen in various other parts of the monuments. The quatrefoils are tied together at each foil by an ornamental ring, loose, so that every panel, secured to pillars at the sides, is rather a suspended metal net than a rigid *grille*. These most remarkable monuments, invaluable dated examples of the condition of the arts in Italy in the fourteenth century, have been described as a mixture in style of the Pointed and the Romanesque. They might be more properly spoken of, especially that of Can Signorio, as a mixture of the Pointed style with that of the then coming Renaissance. Strangely huddled together close to the "Ancient Church of Our Lady," they are much neglected, and call for the reverential care of the municipal authorities. These should consider themselves trustees for the whole world of art, and ought to perform their duty rigorously. Even in a pounds, shillings, and pence point of view, the Veronese will find their account in preserving the attractions of their wonderful city.

In order to get some idea of all these attractions at once and decide where to run to next, visit the Giusti Gardens, from the highest part of which, ascended to by a staircase and inclined planes, a splendid view of the city, with its churches, Roman theatre,—little of it remaining,—Palazzi by San Micheli, the winding river enclosing the greater part of the city, its barracks, forts, and walls, is obtainable. The gardens themselves, full of flowers and pleasant memories, have an ancient aspect, and are especially noticeable for cypresses, one of which is nearly 130 feet in height. The campanile of San Zenone comes beautifully into view, and thither, though quite at the opposite side of the city, we repair. This is a very noble twelfth-century church, without transepts, on the site of an earlier work, and is full of interesting morsels;—one of the earliest wheel-of-fortune windows, executed by one Briolotus; a remarkable sculptured portal, the pillars resting as usual on the back of animals; very early metal doors, curious carvings, frescoed walls, and a few other pictures, especially one at the extreme east end by Mantegna, which is a superior work to his "Triumph of Julius Cæsar," at Hampton Court. Mantegna, it may be remembered, was the brother-in-law of Giovanni Bellini, and one of the first painters who practised the art of engraving. He died in 1506, in his seventy-sixth year, and was buried in Mantua. Ariosto, in a commemorative stanza, quoted by Mrs. Jameson, places the name of Andrea Mantegna between those of Leonardo da Vinci and Giovanni Bellini, and not without reason.

San Zenone is descended into by eleven steps; and there is a rise of thirteen steps up to the choir (rebuilt in the fifteenth century), and three steps more to the high altar. There is a very large crypt below the choir of an earlier character; piers to support the upper church are built in it irregularly. An eleventh-century tomb is seen here serving as an altar.

The walls of the church show alternate courses of brick and stone. The remarkable Tazza at the western entrance on the north side, formed out of one block of red porphyry, supported on another, is about 9 feet in diameter (not 13 feet 4 inches, Oh, my Murray!), and 1 foot 9 inches in thickness.

The font, proper, is a Corinthian capital reversed. We could fill a page with details, but will content ourselves with saying that there are some wretched brackets for lamps, and that the interior is in other respects horridly disfigured by modern messing. The roof is painted, not adorned, with the Austrian colours. The building is ill cared for.

The campanile near the church is of the twelfth century. The cloister has brick arches on coupled columns of Verona marble, one set in front of the other, and is very elegant. Mr. Street has given some sketches from it in his book on "Brick and Marble in the Middle Ages." Let us add, as cognate, that many old houses in Verona, the back parts of some and others altogether in out-of-the-way places, give interesting examples of the artistic use of brick, often mixed with stone, and have had some share in leading to the use of coloured materials of the kind amongst us. Vari-coloured materials alone, however, externally, must not be trusted to in London. The smoke of the atmosphere soon brings all to one colour, and then if the *forms* be bad, or there be none, the result is necessarily unsatisfactory.

Attached to the church of San Bernardino is the Pellegrini Chapel, to which the admirers of San Micheli point proudly as one of the remarkable works of that architect.

San Micheli was born in Verona, in 1484, and lived until 1549. He quitted his native place when sixteen years of age to study art amongst the ruins of Rome. Military construction had much of his time, and to him is due a new system of fortification. Several Italian towns, including Verona, show his works of this kind as well as of civil architecture. One of his earliest buildings in his own town was this Pellegrini Chapel, the lower part of which is remarkably elegant. The fact that it was not finished under his own direction may account for the circumstance that the balustrade over the first Order is ugly, and the whole of the upper story less satisfactory than the lower. Friends had more than once heard him grieve that he was not rich enough to buy this chapel to prevent the owner from marring his design. It is circular on plan, with a Corinthian Order. Pediments in the interspaces follow the circular face. The mouldings and details of the pilasters exhibit great refinement. The material is of that fine, hard stone which has been called *Bronzino*, because in being worked it emits sounds like bronze. A capital material it is.

To give San Micheli proper credit for his palatial residences, of which there are several in Verona, the date at which they were erected must be remembered. He was a precursor. The details in parts are delicate and admirable, but are coarse in others. The balustrades are over large and badly profiled, so that, after all, he may have designed the one in the Pellegrini Chapel. The Palazza Bevilaqua, one of the best of his designs here, is in a miserable condition. So too are other of the palaces. Venice owes to him, amongst other works, the Cornaro Palace and the Grimani Palace. He must have been well helped, as indeed we know he was, to get through the amount of work

that bears his name. Vasari shows him to have been a generous, simple, loveable character,—a man with a heart as well as a head.

However, we must be going along. The Cathedral deserves a more complete investigation than it has had. Without doubt, much of the building belongs to the first half of the twelfth century, but portions of it are earlier.

The western porch in two stories, the columns of the lower resting on sculptured animals, displays a large amount of carving, and includes rude statues of the Paladins Roland and Oliver, introduced perhaps, as Gally Knight suggests, with reference to the traditionary connexion of Charlemagne with the church previously on the site. The arms and costume of these figures, we may suppose, from quotations by Maffei and others, may have been sculptured from the description given by Livy of the Samnite warriors. Roland, or Orlando, is the better known of these celebrated warriors and gentlemen, the friends of Charlemagne. Every musical young lady knows of "Ro-land the brave" and the fight at Roncesvalle; every lover of old literature has read the "Chanson of Roland," and every ordinary reader the "Orlando Furioso" of Ariosto. Roland's celebrated sword, seen on the statue to which we are referring, is still preserved (or one that represents it) at Rocamadour, in France. He perished in the year 778, and we still talk of giving "a Roland for an Oliver."

The exterior of the cathedral and other buildings, exhibiting materials of varied colour, stone and marbles, on which time and the weather have acted differently, presents a somewhat patchy appearance.

There are two or three noticeable pictures in the cathedral, especially an Assumption, by Titian; the Madonna very fine. This painting is unfortunately dirty and spoilt. It would have been better cared for if it had been retained in Paris, where it once went under the inspiration of Napoleon.

In the Chapel of St. Agatha, part of the cathedral, there is some good *Cinque-cento* work, in the shape of sculptured pilasters. In the pattern of the marble pavement of the cathedral, a crescent constantly occurs, but no one on the spot could give any reason for its introduction. Moving through the world the rareness with which they of whom a question is asked can give the right reply, has led before now to the hasty assertion, that "no one knows anything." Yet after all, "no one knows nothing," is a safer belief. The field of knowledge,—the field of life,—is so wide, the roads are so numerous, that many may be on them, yet unable to give other travellers the precise information required. It is scarcely too much to assert that every one knows something the inquirer does not, and is in some particular his superior. Let us approach every human being, therefore, with a certain amount of respect.

In the Church of St. Athanasia, as in the Cathedral, there is some good work of the *Cinque-cento* period, especially a fine altar-piece, on the north aisle of the nave, with a sculptured figure, between columns. The church itself belongs mainly to the thirteenth century, and is the best specimen of Gothic art in the city,—a noble interior indeed. The aisles are very narrow, the nave very wide. The walls have been painted throughout, and there are many independent pictures besides. The painting of the ceiling is somewhat coarse. The font, carved in 1591, is borne by the figure of a patched beggar. The main columns and capitals of the church are handsome; but the whole has been messed in modern times. The Pellegrini Chapel here is adorned with a number of terra-cotta bas-reliefs, which, as seen through the grille, seem to want simplicity. In another chapel — Chapel of the Rosary—by San Micheli, there is a portrait of that Mastino II. della Scala, whose monument we have mentioned. The pavement of the church is beautiful. The west front, with the exception of the marble porch, remains in brickwork only, waiting its casing of marble—and it will have to wait long.

There is a charming canopied monument in the piazza near the church, on corbels, over a doorway, as the manner was, in memory of one William of Castel Baldo, who was a friend of the Scaligers, and aided in the building of the Church.

San Fermo Maggiore is full of interest and story, with some good monuments, and an elegant Gothic canopy over the pulpit. The roof lined with wood, and having visible tie-rods and kingbolts, presents an odd pyramidising outline of small curves and squares, in style Chinese rather than anything else. The crypt may be of the eleventh century.

The choir of the Church of Santa Maria in Organo (the façade by San Micheli) contains much inlaid wood-work by Fra Giovanni, of Verona, executed at the close of the fifteenth century. The Italians excelled in this application of marquetry (*Tarsiatura*) to the decoration of furniture. Fra Giovanni, of Verona, and Fra Raffaelle, of Brescia, are amongst the most noted workers in it. Giuliano da Maiano flourished a little earlier than these. From "fair Verona," however, we must haste away. We could with pleasure write about it through another chapter, but must content ourselves with a dozen lines. Many of the churches, we should have said, are filled with soldiers; in several of the palaces live the officers, self-invited. In fact, in Verona there are soldiers everywhere. No wonder, then, that in leaving this city the last thing we saw was the last of a soldier. The procession issued from the Porta Nuova, through which we had just before passed on the road to the railway for Venice. The black pall that covered the coffin had a large yellow cross upon it; the soldiers following the bier wore each a sprig of, probably, the "mournful cypress" in his cap. There were muffled drums; but no other music as with us; and, when the procession had advanced a hundred yards from the gate, it halted. The soldiers marched back again, and the bier, nearly unattended, was carried slowly away into the distant landscape!

And so, Farewell Verona.

PROFESSOR DONALDSON ON THE POSITION OF ARCHITECTURE.*

To maintain the high standard of English art and science at a time when all the other branches of practical knowledge are cultivated with a zeal rich in fruits of the past, rich in hopes for the future, is now the great aim of the profession. But that which strikes the mind, as one contemplates the present condition of architecture, is the remarkable phenomenon of the number of intelligent and gifted architects who now stand as men of mark before the world, and the fine edifices which British genius has produced all over the United Kingdom, contrasted with the low and apparently neglected state of architectural education up to the present time. And when I say architectural education, I mean the absence of any recognized and adopted system. Here the student is left to his own sympathies, his own inspirations, the suggestions of his own zeal more or less active, and to his unguided experience casually gained in the office of his master, where he can become familiar only with the taste and science of the works there carried out. We do not possess the professional recognized *ateliers* of the professor, as in France, where gratuitous courses of lectures, also periodical prizes and grand competitions in the schools, and the stimulating intercourse with well-known associates, and the pride of the school, keep up the spiritual earnestness of the student to a high-wrought pitch of excitement, and nerve him to energetic efforts for eminence and success. On the other hand, we have to congratulate ourselves that we have no Governmental rigid routine scheme, as in Germany, binding down the taste and study of the youth to one formal line and process of artistic thought. Still I say, though many of these sources of encouragement and instruction are not available for our young aspirants, yet our profession has produced men of the highest merit, who have entered upon the arena of European competition with the greatest honour, and carried off the noblest prizes even on foreign ground.

It must be allowed, therefore, that the student has had hitherto to labour under great disadvantages, which at length became intolerable, and after many strivings the wants of the younger followers of our art forced themselves upon our attention. The Institute consequently matured a broad scheme of competitive examinations, which points out the branches of knowledge to be studied and the extent to which they must be acquired, in order to gain distinction. And thus the contest of life is carried on, and the benefits are not merely resulting to the individual, but are diffused throughout the whole mass. The success of one fires the ambition, stimulates the ardour, and excites the hopes of his fellows. He struggles on and studies, and perfects also his mastery of drawing. He loses no opportunity of improvement; observes, records, and thus strengthens his mind with materials for the future life of action. The sluggard becomes ashamed, and is aroused from his torpor: the indolent throws off his indifference; even the weaker in intellectual power feels that his capabilities will be improved strength given to the mind, facility afforded to his manipulations; that there is a field open to him, and that painstaking and laborious pertinacity, honest industrious hard work, may find its reward, though not so high, perhaps, as that of lofty genius, but still a useful, honourable, remunerative position. The high prizes in all callings are only for the few. We see that in the church, in law, and in medicine. But there are, nevertheless, notable rewards for those who fill up the intermediate grades of necessary usefulness in the great scheme of social life. These examinations are also useful as affording the young man a true index of his powers and of his weakness. If he fail, he knows in what department he must work on to acquire the knowledge in which he is deficient. It is better that he should ascertain where his weakness lies thus early, than that he should be taught it by a disastrous failure in professional practice.

Thus the pupil with a purposeless and vague scheme of study in his mind has been taught a useful lesson, and learns that positive well-grounded methodical knowledge is superior to dreamy idealities of an unstable mind;—that the sooner he puts off his indolent habit of thought the better, and the earlier he begins to methodize his mode of study, and seek a higher standard of attainment, the sooner will he gather the fruit, and the *riper* that fruit will be. He will find that it is of no use to defer setting to work: the result of this preliminary contest with his fellows will but foreshadow the results of after-life competition. If in the one he fails and amends not, in the other he will be sure to be as far behind, with consequences still more serious. Even in my own class at University College, I can at once distinguish the hopeful student of future years. The earnest attention he bestows on the subject, the eagerness with which he takes into his mind every atom of useful information, and notes them down in his memoranda, the accuracy and care with which he keeps his note-book, and the fulness and variety with which he enriches and illustrates the report of the lectures, which I occasionally require of my class during the session: all these indications prove to me that such-and-such will carry off the prizes and higher certificates of the academic year, and I feel assured that they will afterwards gain the great prizes of professional life.

And thus must it be in these competitive examinations established by this Institute. It is a generous emulation in which each seeks to rise higher than his fellows, not by striking down his rival, but, by more practised and skilled attainment, to reach an excelsior height.

The examination papers show the progressive steps, from the earliest elements of knowledge to the higher ranges of creative thought. In the execution of buildings the artisan possesses, as the basis of his knowledge, the plumb-line to ascertain the perpendicular or vertical, and the use of water to decide the level line, and with which elementary data it would be hardly possible for the practical man to move one step. But it is upon these simple tools, resulting from the general law of gravitation, that is built up the theory of construction, which renders the Pyramids in their vast extent true to that great law of the universe, and which gives to the Parthenon its stability and to the magic productions of the Middle Ag

* At the request of members of the governing body of the Royal Institute of British Architects, we publish the greater part of the president's opening address, on Monday, the 2nd instant.

bat equilibration of vaulting which suspends asses in mid-air with the slightest aid of solid ipport. Science and laborious study can alone ach this, for the results are not fortuitous, but roceed from the deepest theories and the largest xperience. The student, far from being dis-uraged, should be encouraged by the fact; for e step leads easily to another, and the energy hich can rise up the first round, can as easily rmount the other rounds of the ladder of fame, d each succeeding one will be the easier con-ered, and the greater pleasure experienced in e pursuit as success confirms hope and practice creases strength.

We trust, therefore, in January next, to see r young friends come forward to these examina-ons with as much zeal as at the last, and in un-minished numbers. Then will the profession se each year its standard of proficiency, and hieve new triumphs in the monuments which ll be erected; until in taste and skill they will t only equal but excel the works of Greece and me and of the Middle Ages, which have hitherto rne the palm of unrivalled excellence.

I have to notice another point connected with e education of the young architect;—which is the rt time in which parents and guardians ima-e that a youth may be qualified to start on his ofessional career. I have been asked by some three years would be too much; and I know es where a four years' apprenticeship was con-ered a species of interminable bondage. There mot be a doubt that to revive the term of for-r times, of seven years' clerkship in the office, ld be a sacrifice of much precious time; but en we look at the papers of our competitive minations, the term that may be usefully ed in the builder's workshop and with the ctical measurer, and the thorough routine of ctice to be acquired in an architect's office, we not doubt that six-or even seven years may be fully and agreeably spent by the youth who ires to be an earnest, thorough, well-grounded ctitioner, and to enter upon the real battle of armed at all points, and capable of under-ing any responsibility.

n speaking of the professional career I must ture to urge the importance of young men ac-ring the business qualifications of practical as being essential to their satisfactorily rea-g all the fruits of the more intellectual artments of their pursuit. And I do not mean say that the most qualified are always and essarily the most successful, or even when suc-ful, carry off the crown without a thorn to re-d them of the instability of all human enjoy-ats. There is so much of business mixed up the artistic portion of our profession, that n does patronage or chance, and even the very mpetency of committees or patrons, or cun-t, win the premium from the more deserving. very tendency, as in the other professions, to w everything, good or bad, great or little into hands of a very few who may stand at the top of the tree, prevents that fair distribution of loyment which would foster rising talent and ard other meritorious members. Again, the t of a distribution of patronage by the Govern-t in the many works they have to execute, pre-s that fair encouragement to those who, after y years of wearisome toil, may have carried off highest prizes of our schools, and spent a little me in foreign travel, and then starting into tice find all their fair claims to notice dis-rded and themselves unheeded, as though r had no claims to distinction and deserved not slightest token in recognition of their studies, r sacrifices, and their merits. In fact, the rnment very properly expect to employ men e very highest talent, and yet make no effort, ribute nothing, to place the means of instruc-, improvement, and subsequent encouragement ain the reach of the earnest aspirant. But e is the like realization of bitterness even to e who have carried out the noblest works, and d the objects of envy and admiration to the inking. Of such three striking instances r to my own mind. The committee for the iding of the International Exhibition of 1851 sisted, as you know, of six members—three neers and three architects: of the six "*quorum ma pars fui*" I am the only survivor. To e of these, my colleagues, I allude,—Isambard el, Robert Stephenson, and Sir Charles Barry; all will allow that they were fit representatives ried mental qualities in their several pur-

runel—brilliant, quick, full of resources, im-ned;—Stephenson—solid, thoughtful, calm, deliberative;—Barry—profoundly acquainted his art, master of various styles, a sound thinker, and rich in imagination;—all of them at the top of their profession, and having had to execute critical works of the highest class.

When the first section of the Great Western Railway was opened to Slough, the success of the continuous bearing system of sleepers seemed a triumph of Brunel's sagacity. He had accomplished a great reform and established a new theory; and one might have imagined that the moment when he received the congratulations of a numerous assembly of scientific men would have been the happiest, proudest of his life. But I recall well the words as they fell from his lips, when with somewhat of a depressed tone he acknowledged the compliment paid him, and said, "However fair all might seem, and however prosperous the experiment that day had proved, there still remained much of care and anxiety and responsibility and doubt, ere he could realize to himself that he had indeed succeeded."

When the last tube of the Menai Bridge was to be raised, Stephenson invited his colleagues down to witness the operation. Barry and myself alone could avail ourselves of the opportunity, and we saw the marvellous combination of simple expedients, by which the huge mass was floated down to its position between the piers, and the rapidity with which the enormous weight was raised some tens of feet, and without the slightest pause, or irregularity, or disorder, lodged in its permanent resting-place. On this occasion we heard him declare in reply to the felicitations of a large company, that not all the triumph which attended this great work, and the new solution of the difficult problem of a rigid roadway at such a height, and carried across such a stream so as to allow the largest vessel to pass with all its sails set beneath it, could repay the anxieties he had gone through, the friendships compromised, and the unworthy motives attributed. And were another work of like magnitude offered to him with such consequences, he would not for worlds undertake it!

We all know how our sympathies were excited by the ordeal of twenty years through which Sir Charles Barry had to pass for the completion of the Houses of Parliament. At the first an unworthy attack from certain competitors, committees of the Commons, committees of the Lords, a succession of Chief Commissioners not always favourable, an extravagant system of warming and ventilating thrust upon him at a cost of 80,000*l.* to the nation, and even the creation of his own prolific genius attributed to another eminent in the art, but who was too generous to allow such a misstatement without the directest denial; and then again the parsimony of the Treasury abstracting from the man of genius his fair professional reward;—all these harassed and embittered the life of our friend, and deprived him of the unclouded joy he ought to have felt in having executed the most important building of modern times, and in having endowed the metropolis with one of its noblest features.

Such may be lessons to every one, and I recall them not to depress, but to strengthen all under the greatest difficulties; and to show that, whatever the struggles they may encounter, whatever unjust aspersion they may have to endure, it is but the common fate of genius and success; and that after all the only best reward is the consciousness of having done one's duty, and not the smiles or favours of a fickle admiration. So true is the wise observation of Guizot at the conclusion of his "Life of Washington," "That success even does not efface the sad impressions to which the combat of active life gives rise; and the fatigue contracted in this arena is prolonged even in the calm retirement of repose."

Passing to the subject of the nature and quality of our professional publications, I think it must be acknowledged, that the architectural illustrated works of late years, with the exception of Mr. Cockerell's last volume, and some other works, have not maintained the high standard which was generally prevalent some years ago. Where it is the intention of the author to publish transcripts of his own sketches, and not seriously and elaborately worked out drawings, lithography is undoubtedly the best imitation of the crisp, sparkling, and off-hand pencilling of the artist. But wherever the graver is used, it should be with the delicacy, refinement, and finish which distinguish Stuart's "Athens," the volumes of the Dilettanti Society, or the works of Britton, Pugin, Blore, and such standard authorities. The loose, scratchy, and guesswork execution of some productions does not worthily represent the art. The French, on the contrary, and the Germans, execute their engravings more elaborately and carefully, and with a higher finish. At this time there are two works publishing by Mons. Daly, at Paris; and there is one in London, professing to give practical examples of constructive architecture, and they allow of a comparison on this subject. The English work is a compilation of examples without selection. Details are given of cornices, mouldings, and other details, possessing no special beauty or grace, and taken apparently from the ordinary volume of Gibbs, of the last century. They are drawn to an enormous scale, as though the editor did not care to take the trouble to reduce them to a manageable size, and many of them repulsive from their vulgarity. There may be an excess in point of scale, and parts drawn to the size of execution often unnecessarily encumber such a work, and render it ponderous. In fact, the reader had better be referred at once to the original work from which they have been copied. Great discrimination is required in works of this class: certain elements of selection should be observed, a degree of merit in point of taste and of talent as to the construction. There is no doubt that, in mere matters of execution, there may be many instances of most ingenious skill by practical mechanics, engineers, and others, who lay no claim to taste, and whose previous education may not have qualified them to invent combinations of form and detail, so as to invest construction with the nobility of artistic grace. In instances such as these, an editor of such a work would be wise to confine himself to the mere portions embodying the true value of the example, the scientific disposition and combination of the parts. But to give what is *intended* for mere ornament, but which is in truth mere disfigurement and caricature, is to be unjust to the designer and lay bare his weak point. Although the price of such a publication to be generally purchaseable should be placed at the lowest remunerative figure, yet the execution ought never to be coarse and negligent; nor should there be neglect either in the selection or arrangement of the details. Nor ought it to be a reproach, that many of the finest and most interesting and instructive works of recent time are absent, as though mediocre practitioners, anxious to make their names known, may have been but too happy to volunteer illustrations, and the editor no less ready to accept the costless sheets, which might swell his work at little expense.

Mons. Daly's publications offer a striking contrast to the preceding, though they have somewhat of a like object. The illustrations of the "Revue d'Architecture" are drawn and engraved with the utmost refinement and finish, and show an earnest loving treatment of the subjects. And I must notice with emphasis the graceful and elegant manner in which he has got up the "Architecture Privée, or Domestic Architecture of the Nineteenth Century, under Napoleon III.," being new houses of Paris and the suburbs, consisting of plans, elevations, and sections, and details of doors, windows, staircases, painted decorations, chimneys, gardens, &c., the plates all executed on steel. The selection is made with peculiar care, and I feel that those who are refined in taste will always require, in such illustrations, the chaste rendering of such a work as this, which can alone worthily illustrate whatever there may be of graceful design in the original, and which a coarse execution will only debase and disfigure. We might wish less repetition in the examples of the same sentiment, taste, and distribution, and which becomes to a degree irksome, and we may desire more practical details as to the structural combinations; but, in point of execution, these volumes are fine instances of care and finish, and offer a standard to which it would be desirable for us not to be inferior. We were the first in our "Stuart's Athens" to give the highest tone of illustration for architectural works, which the French have been eager to equal and surpass.

You will recollect with what careful deliberation the Institute drew up a scale of charges for professional services. It was anticipated that this would prove a useful guide, producing uniformity of practice on this delicate and important point; and, at the same time that it justified the architect in his fair claims, it should prevent an exaggerated charge for remuneration discreditable to the general body of the profession. And happily many cases have occurred in which such questions have been settled to the satisfaction of parties by mere reference to this scale, and legal intervention and misunderstandings avoided. But I am sorry to say that instances have arisen, in my own experience, with regard to some practitioners, not members of our body, and imperfectly acquainted with its scope and tendency, in which the scale of the Institute has been quoted to support un-

reasonable demands; and, although worded with every care to avoid misinterpretation, it has been adduced to justify claims greater than intended or justifiable. It is to be remembered by us, that this scale was meant not merely for the protection of the employed, but also for the protection of the employer; and that any attempt to contravene that great principle, and to render it a pretext for an excessive recompense, will be contrary to the spirit of integrity and high honour which should distinguish such a body as ours. Wherever called upon to give an opinion as to its intent and bearing, any doubt which may arise should be interpreted in the most liberal manner for the employer, since it was our body which drew up the scheme. Upon no other ground will this scale of charges be entitled to be considered as fair and impartial, or referred to as equitable, authoritative, and conclusive upon such questions.

It is subject for satisfaction to notice, that the Metropolitan Board have, with most creditable despatch, recently accepted a tender to the amount of more than half a million, for the execution of the portion of the Thames Embankment on the north side from Westminster to Waterloo Bridge, and that particulars are preparing for the section from the Temple to Blackfriars. It is to be assumed that the like movement may take place in regard to the south side, and that thus our noble river may have its banks faced with a continuous line of quays, which will at the same time sweep away the mud deposits that poison the water and the air, and will give it that aspect of majesty suited to the metropolis of a great empire. It is gratifying to observe that the leading features of these quays will display a certain artistic treatment, and will not be like the railway bridges which span the Thames in the same locality, hideous masses of utilitarian skill. We congratulate, also, the public in London and Dublin upon their being roused to the consideration of the frightful erections contemplated by railway companies, and of some which even now deform certain of our principal thoroughfares and threaten others. There has been too much indifference hitherto to the important influence of architectural taste on the convenience and enjoyment of the public. If proposed works embodied a useful purpose, the consideration of their forming decorative objects was regarded as non-essential; and we have thus certainly allowed many disgraceful disfigurements in the metropolis. In France it is the reverse. As in Athens, the rude speaker, however eloquent, who sinned in his grammar or his quantities, was hooted down; so in Paris public improvements are not tolerated unless treated as public embellishments. The consequence is, that Paris, under the spirited and enlightened renovations of Napoleon III., seconded by the æsthetic tendencies of the public mind, has become the queen of European capitals. She leaves all others at an immeasurable distance by the noble disposition of the new thoroughfares, the amplitude of the streets and public areas, the nobility of the public edifices, and the tasteful decoration of the private dwellings. It has become the fitting and enjoyable residence of a highly-refined intelligent people, whose life is not wholly absorbed in the cares of business or the mere mania of amassing wealth.

Much of this conduct of ours arises in part from the unwillingness of the Government authorities to incur responsibility; still more from the niggardly parsimony of Parliament to afford the requisite funds. Only the other day the Chief Commissioner was precluded from entertaining the proposal to make the newly-proposed and leading street from Blackfriars to the Mansion House, 80 feet wide, instead of 70 feet, because he felt assured that Parliament would refuse the extra amount (some 100,000*l.*);—and this in the face of the increasing traffic in the City, and the inadequate width of any of its largest thoroughfares. My feeling is, that it would be wise in Parliament, as being of the highest benefit to the empire, if public subventions, as in France, were given, in order to promote a spirit of reformation in our towns. There are many which, by the tide of manufactures and commerce, have from insignificant villages become emporiums of trade; and, however extended in all directions, have retained the original narrow high street, and the ways and alleys opening thereunto, so as to maintain and paralyse additions in the like stinted dimensions. They thus still present cramped tortuous lines of communication, without one grand avenue from north to south or from east to west, to open up the way for the teeming tides of living beings who swarm the streets, hustling and impeding each other; or for the carriages, waggons, carts, and animals huddled into one mass of dead lock. If such contributions were once freely accorded in a certain proportion to any municipality, who would undertake the task and provide the main funds, we should soon find the spirit of improvement arise, petty local jealousies put to flight, higher aims entertained, and hopelessness of improvement superseded by energetic efforts to ameliorate and correct, and to accomplish grand and useful projects. Oh! for a ten years of the liberal and tasteful spirit for improvement which now pervades the whole of France, and England would accomplish great things.

There is also required some immediate interference by Parliament for the purpose of securing to the labouring classes more fitting dwellings than those swept away to make room for the metropolitan railways. There is wanting a greater consciousness of parental care in the authorities, whether the Parliament or the Government, to grapple with this difficult question. It is hedged in with difficulties: it is no one's special business: it carries with it no profit, and would have only the thankless reward which usually attends philanthropy. But it is a duty: the health, the happiness or misery of tens of thousands is involved in it; and it is a crime that, as a principle of action no longer to be deferred, the proper housing of the working classes lies in abeyance, and Parliament is heedless of the sufferings of the poor, and of their duty to undertake the remedy.

Mr. Hansard informs me that the artificial stone Committee, appointed in March last, have held eight meetings and investigated several processes, and tested by crushing at different dates after their manufacture each series of samples. These proofs necessarily take considerable time at each meeting, and extend over many weeks: this has prevented the committee from being ready with their report at this the commencement of the session. They think it likewise advisable, before arriving at any conclusion, to submit several of the samples to the exposure of the weather during the winter season, and to note the effect, if any, of frost after wet, or sudden change of temperature upon them. During their investigation the Committee have taken the opportunity to test the strength of other materials, viz.;—bricks, cements, slate, stones, marble, and woods, the comparative results of which they hope, when finished, will prove interesting to the Institute. Some startling questions present themselves on this topic:—How is it that all at once we find out that none of our natural stones in common use are fit for construction, but liable to rapid decay? How is it that it should be assumed to be more economical to go through the process of manufacture, and to transport the object to the work at a less cost than the natural stone itself? Why is it that the best beds of Bath, the most enduring of Portland, such as Sir Christopher Wren used at St. Paul's, cannot be extracted from the quarry and conveyed to London at less expense than the artificial product? Are we prepared to put up with the dingy, opaque, and unartistic effect of the artificial stone, when the varied tints and the transparent tones give so great a charm to the natural material in buildings? Are we sure of their permanence?

You are aware, gentlemen, that a considerable body of admirers of the late Mr. A. Welby Pugin, anxious to mark their respect for his memory, and for the eminent services he had rendered in the revival and just appreciation of Mediæval art, entered into a subscription and raised a sum amounting to about 1,000*l.* After much deliberation and the due consideration of a variety of proposals, as to the best manner of carrying out this intention, it has been at length decided to realise a wish, expressed many years ago by Mr. Pugin, to found an endowment out of the annual dividends or proceeds arising from this principal sum, and to apply them yearly to assist a well-qualified student to travel for not less than eight weeks in the United Kingdom of England and Ireland, for the purpose of studying Mediæval architecture in Great Britain, whether in ancient or modern buildings;—no person, who has once held the studentship being eligible for re-election. In the first year the election is proposed to be made by four certain members of the committee of subscribers and five Fellows of the Institute. In subsequent years it will be by a committee of nine Fellows of the Institute to be named by the council. A declaration of trust is proposed to be made, placing the control of the said fund under certain regulations in the council of the Institute for ever. A draft declaration of trust has been prepared by the committee of subscribers and submitted to the council, and will soon be brought before the members for their consideration and adoption. * * *

In conclusion, gentlemen, I would observe, tha all art is a magic power. It is beyond the ken o human cunning. It is an instinct—an innat principle of fervid imagination: be its working slow, laborious, like those of a Rousseau or Byron, or glowing and ready like those of Michelangelo or a Vanbrugh, still it is the sam divine gift: with some it is on the very surface with others deeper seated, and only to be realize by immense toil. However powerful poetry music, painting, or sculpture may be, as arrestin the attention, fascinating one's faculties of thoughi or reason, speaking with a thrill to every emotion pleasing, teaching, ennobling; yet architecture, b other means and by instruments the most rude, i at once more necessary to man, and still more ab sorbs his feelings and his admiration. Out of thi crudest materials and mis-shapen masses sh creates pile upon pile—gives them a grace no their own—combines them with a skill at whic the most scientific are lost in wonder. Her monu ments, under the accumulations of centuries c overgrown with creepers and lichens, employ th learned to explore their origin and destination. I them they discover unthought of secrets of pas times—graces in their proportions, beauty in thei ornaments, and hidden art in their painting They may reveal a nation *long since forgotten o before known only by name.* Architecture en riches the desert, as at Palmyra, with vistas c continuous colonnades and splendid palaces, an offers a halting-place of safety to the weary tr veller, security to the wealth of commerce. O the bare rock she raises piles of vast magnificenc and fanes of matchless beauty, in whose ver fractured stones successive races seek for a hidde law of beauty, an inspiration to enable them t revive the truest aim of art—nature's most exqui site transcript. Who is there that wanders amon the stately ruins of the Athenian Acropolis or th sublime memorials of the Roman Forum, and doe not envy the glory of those past ages of classi art? Who can contemplate those traditions an mysterious sublimities of the creation of th Middle Ages, and does not feel his heart throb wit powerful emotion? Who does not dwell wit delight upon the works of that race of merchan princes who, upon the shifting sands of the wate covered lagunes, could rear up those stately pile which bear the names of the Grimani, Balbi, Ver dramini, Foscari, and bid wood, stone, brick, an marble speak with stirring effect to those wh have eyes to see and taste to appreciate: men wh with fierce republican pride might have challenge cardinals, princes, popes, and kings and emperor to produce nobler realities out of fiction? Th architect it is, who, with his pencil and compas with a mind full of deep things, under God's pr vidence and with his brave heart, creates all th and toils on unheeded, often misunderstood, fr quently blamed, rarely encouraged except by h own bright star of hope and faith. Let us, the work on with the consciousness of somethin within us, which may, sooner or later, before when in the grave, be at length understoo admired, honoured by our fellow man.

ARCHITECTURE AND THE ROYAL ACADEMY.

THE "Report of the Commissioners appoint to Inquire into the Present Position of the Roy Academy in relation to the Fine Arts, togeth with the Minutes of Evidence," is now comp mented by the publication of thirty appendi and a copious index; and the public may be in position to judge of the capabilities of the prese institution, for the development of art in gener and of art in architecture. The Report has be noticed in many of the reviews and newspape but previously to the completion of the publicati of the evidence, and therefore not adequately always correctly.

The Commissioners were Earl Stanhope (cha man), Lord Hardinge, Lord Elcho, Sir Edmu W. Head, bart., and Messrs. W. Stirling, Danby Seymour, and Henry Reeve. Mr. R. Sketchley was secretary. Forty-six witnes were examined. Amongst them were Mr. Ha wick and Mr. Scott, architects and Royal Aca micians; Mr. Tite, then president of the Institu Mr. Fergusson, Mr. Layard, and Mr. Rusk Mr. Tite, Mr. Scott, and Mr. Fergusson, none whom joined the Institute till a comparativ recent date, were specially examined as to poi concerning the Institute, on which older memb might have been expected to possess the best formation. Mr. Donaldson was not examined. Charles Eastlake's examination occupied betw four and five of the sittings.

The questions raised during the proceedings, and which would interest our readers, were very numerous. The question whether the Academy is mainly a private corporation, only become entitled to be housed at the public cost, and receiving the direct countenance of the Sovereign; or whether it is a public institution with responsibilities in the application of its funds to objects external, or of the general promotion of art: the question of the Trafalgar-square site, whether required for the National Gallery, that is in the event of increased space at the back being obtainable; and the question of the constitution of the Academy, of the branches of art which it should comprise,—whether Painting only, or the three arts as now nominally, or all including the "minor" decorative and ornamental arts,—of the total number of Academicians, and that of Associates, and whether the subordinate class should be retained and largely recruited, or abolished; of the infusion of a non-professional element into the Academy, more largely than at present, and entrusting to the non-artists real duties, as in the decision of questions of art; of the desirableness of having some foreign members; and of the relative proportions of the several arts and classes in an Academy supposed constituted on a wide basis; these form only a small portion of the subject which has received elucidation. Less satisfactory than are the results of the labours of the Commission in these questions, are the results of the inquiry into the points which concern the exhibition, the schools and teaching, and the possibility of utilizing the Academy as a permanent council of advice in all matters of the art-element in public works. The main accrued results are, first, evidence that the several short-comings of the Academy are not confined to architecture and sculpture, and the "minor" arts, but extend to painting also, that is in the system of the schools, and in the noticeable deficiency of works of the highest class, and of those decorative of public buildings, as well as of space for the pictures in the exhibition; and, second, the testimony, never before so unanimous, and the confession never before so complete and authoritative, that the "general" "complaint during many years, of the bad taste and utter want of system which have been displayed in the construction of our public buildings" has been, in the words of the Report, "well founded." Then there is the question between the English system of academic teaching, supposing it improved, and the French *atelier* system as combined with the École des Beaux Arts, and as including the assistance of the pupil in the production of the master's works. Also there is the question of foreign travel, and of the desirableness of a long sojourn in Rome. Conclusions on the points raised in these two latter painters', or painters' and sculptors', questions, would be most important in suggestion for the education of architects. But still, there is a large category of questions left, concerning the whole position of architecture in the Academy. On these, the Commission received some evidence of importance. The question of the education of architects was by no means forgotten in the proceedings of the examination of witnesses. Yet the Commission, whilst referring to the "well-founded complaint" above named, have contrived to conclude their Report without any mention of this, the most important, object of their appointment.

Neither the duty in general, of the development of art, nor that in one of the particulars, the development of art in architecture, has, the evidence plainly shows, been sufficiently fulfilled. The Academy is mainly an association of painters; and as an educational institution, it has never corrected shortcomings of its original foundation, even as regards the special art of painting. Not only is the architectural aspect of London, to which public works contribute, a national disgrace; not only is sculpture, in the statues which we raise, positively degenerating; but certain arts are dissociated from the others, to the loss of each; and to repeat, restricting the view to the painters' art, there is neither public demand for mural decoration, nor the class of men able to execute the works which would create the taste. Those who know what the Academy has effected through its exhibitions, and that men have been educated in it who have done much honour to British art, may deem these assertions strong; but such persons should read the evidence itself, which is now before us. After all, so far as architecture is concerned, it tells little that we were not acquainted with; whilst as to monumental sculpture it repeats much that we have been long advancing.

All, that is members of the Academy inclusive, are agreed as to the existence of the defects in our national art which we have alluded to, and are sensible of the contrast that is presented between the system of education and the results in public works, in this country and on the Continent. It is equally important to note the evidence that art in some respects has degenerated in certain of its branches, notwithstanding the growth of numerous institutions, the Department of Art inclusive, to do the work which might be properly within the scope of the Academy, if indeed not considered so originally. Mr. J. C. Robinson, "Art Referee in the Department of Science and Art at the Kensington Museum," after noting (in his observations first addressed to Mr. Seymour), the general agreement that water-colour painters had "quite as good a claim to the honours of the Academy as the oil painters," asked "why should not also decorative artists of high eminence, gold and silver smiths, professed ornamentists, and designers for industrial purposes be also included?" He well observed that high art could be represented in what might be termed "*industrial vehicles*" as truly as on "mere gilt-framed canvasses, or in cold white marble." Vechte was referred to by several witnesses, and Pistrucci, and John Thomas by some, as exemplifying a class of artists for whom room should be found in the highest grade of the Academy; whilst Mr. Beresford Hope brought forward the claims of the sculptors in stone, and others including the class of artworkmen, as to be recognized in a third order,—a recommendation which the Report of the Commission adopts. Mr. Robinson opportunely said,—

"Originally the Academy *did* admit industrial artists. Moser, the gold chaser, for instance, one of the original members, was one of those talented artists to whom we owe the snuff boxes, *étuis*, and watch-cases of the last century, enriched with their beautiful enamels and spirited chasings, so much more excellent than anything of the kind now produced; whilst Stothard and Flaxman, both last-century members of the Academy, were at least pre-eminent in industrial design; but they have had no successors in the Academy in our own age. Now, indeed, young aspirants will not condescend to study the arts these men delighted in. In fact, the so-called minor arts call loudly for higher recognition and the countenance of the Academy. Our manufactures are bad in design, and so also is our national architecture, mainly because the notion still prevails that the kind of art wanted for them is of a low order."

The Department of Art may have been teaching correct principles,—those concerning the use, structure, and chosen material of a work of industrial art,—and individuals connected with the Department have spoken of improvement realized in our manufactures, which moreover has been admitted by the French; but here is a confession from one of the chief officers of the Department (against which, however, there is no accusation), that the element of *art* or taste, which is as important as the adherence to principles, is still deficient, and is even becoming more so. Mr. Robinson, in expressing concurrence, as might be expected, with the view (suggested in Question 4629), that we should never have "a general diffusion of art till art is introduced into all our manufactures into which art is capable of entering," said:—

"In our industrial art we are now worse off than we were seventy or eighty years ago. Towards the end of the last century we had Flaxman modelling for Wedgwood, and Stothard designing for art-manufactures. No doubt the influence of Flaxman and Stothard was very great on the arts of this country. I think that decorative art, in gold and silver plate, jewellery, furniture, and other branches, was in a healthier and higher position seventy or eighty years ago than it is at this moment."

Many of the designs here referred to, were very deficient in those requisites to which attention would be directed by the study of that which is chief of the structural and useful whilst fine arts, namely, architecture. But there is ground for the question whether, if something has been gained, much has not been lost. We often look in vain for the taste that was shown in some of the furniture designs of Chippendale or Lock, or even in those of the Adams. The Academy has fostered a single branch of art by the exhibitions, which are its source of income; paintings realize prices that some of the witnesses, as Mr. Ruskin, believe to be injurious in their effects upon the art of painting; and the alliance between the arts becomes less and less intimate, and less influential for the good of each. The evidence generally, whilst admitting that there has been progress in architecture, accuses the Academy of caring too little for any art, or of helping towards the social consideration due to the professors of any branch of art, but the one, painting in oil. The prosecution of art in architecture receives no help from painters or sculptors, in the advocacy of the cause: and neither class of artists, most blindly, and fatally as regards the sculptors, has realized the value of a connexion of their arts respectively, with the other art which is concerned with building. We apprehend, the mass have not got a step beyond the prejudice, unknown in any other age, against decorative painting and sculpture as inferior arts. Seldom it is that a painter will understand the art of architecture at all; though to be ignorant of it is almost to be deemed as being deficient in art entirely.

The schools of the Royal Academy were originally (following Mr. Dyce's "Draft of a Proposed Introduction to the Report of a Committee on the Schools," &c., Appendix No. 24, referred to in his evidence,) "'intended to provide the means of studying the human form with respect both to anatomical knowledge and taste in design.'" Further, adopting Mr. Dyce's words,—"No other purpose whatever is recognised; and the only means proposed for this end are, first, a school 'for the study of the best remains of ancient sculpture;' and secondly, a school 'for the study of living models.' This limitation of the schools of the Royal Academy to a single purpose, which by itself is not even sufficient for the education of painters and sculptors, and has no immediate bearing whatever on the study of architecture, in an institution professing to cultivate each of the three arts," Mr. Dyce suggested the Commission should report, that they could not "for a moment undertake to justify;" and they have in effect done so without using his words. The same Academician remarks that "it does not appear that *painting* from the life was originally numbered among the recognised exercises of the students." Principles of design in painting, sculpture, and architecture; the history of those arts; perspective, and anatomy, were to be taught by lectures, and those, few in number: practical knowledge of a particular art was to be acquired by the pupil's own exertions. For the students in architecture, the lectures and the library, with the offer of some premiums for drawings and designs, sufficed. The general scheme as it stood, has however been departed from in some particulars, and in ways that tend to show the necessity of a much more extended circle of study than was contemplated in the original schools. In the school of painting, there has been introduced the study of drapery, to which "there had not been the most remote reference in the printed laws." Mr. Dyce (continuing the "Draft") remarks, whilst if it be necessary to have "a department for the study of drapery and the living draped model," such study is not less necessary to sculptors than to painters, and drawing from the draped model is not less necessary than painting from it, that "sculptors are excluded from the study of the draped model, and painters are not allowed to draw in the so-called school of painting." A sculptor must *paint* from the draped model: otherwise his modelling and drawing are restricted to the nude. A painter may draw, paint, or model from the nude; but he may not draw or model from the draped figure. He sees no more reason for excluding the use of the brush from the antique school, than the use of the crayon from the painting school, and no ground for permitting modelling in the antique school and the life academy, and excluding it from the so-called school of painting: for "modelling is the sculptor's means of imitation, and applies to all his exercises from first to last." The schools, he says, cannot with propriety be classified into drawing, painting, and modelling schools: mere processes of art should be common to all the schools. The names given to the schools tend to continuance of error in the principle of the Academy and in its instruction in the separate arts. The instruction, he shows, should be ranged, not as just noticed, but under the three heads of "School of Sculpture," "School of Painting," and "School of Architecture," the present schools being made classes of those, if necessary. Each school would have something peculiar to itself in the higher studies, and something in common with the other two in the more elementary. He evidently contemplates a greater importance given to architecture, the science, in the studies, in the Academy, than is thought of by the chief witnesses from the profession itself, though not more than we find was sketched out in the "Report on Architectural Education," of the 11th of March, 1856 (Appendix No. 20), by Mr. Cockerell and Sir Charles Barry, a sub-committee of the Academy. The classes for architectural ornament, by his proposal, would respectively form sections of the proposed schools of painting and sculpture. He alludes, however, to the possibility of establishing relations between the Government schools and those of the Academy, so that pupils might go from one to the other, and *vice versâ*,

after a system in use in Prussia, Saxony, Bavaria, and Austria, "the academies being understood to occupy the same position relatively to elementary drawing-schools and technical schools, as the universities do to the grammar and other classical and scientific schools." According to Mr. Dyce's idea of an academy, the architectural studies of painters and sculptors would be undergone in the "School of Architecture;" whilst students of architecture, having to draw and paint or model the human figure, ornaments or flowers, would go for that purpose into the proper sections of the schools of painting and sculpture.

Most of the witnesses give credit to the Academy for the disposition to correct the position, which we have noticed, of affairs, in all points. But, in the present location of the institution, in a half of the National Gallery building, cut through on the ground-floor, by a public way,—besides being badly planned in the exhibition-rooms for the circulation of crowds,—and utterly inadequate in space for whichsoever of the requirements of the Academy, there is no chance of effecting improvement.

Moreover, the length of time that this inquiry has been threatened, and a disposition, now somewhat abated, to allow no credit for the fact that the art of painting has been kept alive without assistance other than the favour of the Sovereign and the free use of apartments, whilst the art has reflected honour upon the nation, have tended to impede the reforms that the Academy might have been ready to initiate. The predominance of painting, and that perhaps not of the highest class, to the exclusion almost of the other arts, if not injury of some of them, results from the fact that the institution is not, like the École des Beaux Arts and the exhibition which takes place in the Palais de l'Industrie, provided for by the Government, but derives its funds solely from the entrance-money to its exhibitions. The class of works are exhibited which will draw the crowds and the shillings, and will also sell; and such works are not sculpture to a great extent; and still less are they architectural drawings. Adequate quarters however would be provided for each class of art, were there building and ground space. This at least is a statement of the position as it is given by the witnesses the most favourable to the Academy. We have only to say in diminution of it, that the sculpture-room after alteration is still very unsatisfactory; that the position of architecture in the exhibition has been made of late years worse and worse; that "minor arts" that were formerly represented, though most inadequately, seem to have been cast out; and that the Academy, as now shown, needlessly omitted to volunteer the information just given completely through its president, and thus alone has failed in part of its duty.

As to the question of adequate space for an exhibition including every walk of art, and for remedying the deficiencies of the instruction for sculptors, if not architects, besides allowing the schools to be kept open throughout the year, we have no doubt that one of the alternatives left by the Report, that of giving to the Academy possession of the entire building in Trafalgar-square, would not quite meet the circumstances of the case. If we understand the position at all it is, that all contributors to the other exhibitions, as the exhibitions of paintings in water-colours and those which comprise most of the landscapes, as well as the producers of works of building decoration and industrial art,—besides the sculptors more adequately provided for,—should be at least invited to contribute to the one exhibition, wherein "unless in special cases no picture of ordinary size should be exhibited with its base less than 2 feet, or more than 8 feet from the ground," wherein if possible pictures should have some vacant space between them, and wherein "rooms should be set apart for the exclusive exhibition" of the water-colours, the engravings, and the architecture respectively. To ensure these recommendations of the Report, and the others,—such as provision of rooms for societies, as the Arundel Society, not to mention *soirées*,—will demand some addition to the present area of the building in Trafalgar-square. With this necessity, provided the question of the site for the National Gallery were settled, we would rather leave the Academy where it is, and erect a front for the building worthy of "the finest site in Europe," than place it in Piccadilly (which locality is not preferred by the Academy) and perchance spoil a site by allotting it to many not quite accordant uses of art and science. Notwithstanding Mr. Tite's adoption, in his evidence, of the late Mr. Alderman Cubitt's words as expressing "the general feeling" of the House of Commons, we are disposed to think that the decision of the House was intended merely as against the South Kensington neighbourhood, if indeed the National Gallery question was not influenced by the opposition to South Kensington, only as the location for other institutions. We wish the question could be again fairly discussed, how far the works of the old masters can be interesting or useful to the great mass of the public—whatever may be the case as to the modern works which, strange to say, have been the very works selected for this supposed less accessible site,—and how far those priceless and irreplaceable works are not suffering from the dust and vapour of the crowds of mere idlers who to a considerable extent interfere with the uses of the Gallery for purposes of study. This view of disadvantages of the Trafalgar-square site for the National Gallery, was placed before the Commission; and whilst it was contended that that site might be of vital importance to the Academy, it was urged that the Burlington House site for the National Gallery, might be better in several respects for the duration of the pictures and other uses of the Gallery. The Commission have not come to any conclusion on the subject, but feel that the acquisition of the ground occupied by the barracks, the baths, and the workhouse, in the rear of the present building, would involve considerable difficulties besides great expense; therefore they seem to favour the alternative "that in such a case the whole of the present building in Trafalgar-square should be handed over to the Royal Academy for their use, subject to such conditions and arrangements as the Government of the day might determine."

But, saying that due regard is not paid in Trafalgar-square, to many walks of art that are not comprised in painting or in the branch of that art which is composed of easel pictures, and including in this category, our own art, we must not shrink from the question whether architecture can be taught in the Academy. Now, all are agreed that nothing can be provided by the Academy, which will render less necessary the pupilage in an architect's office. This must be the case even be there restriction of the view to architecture as the art.

It will not surprise architects, that the evidence of members of the profession, whether belonging to the Academy or not, points to the Institute of Architects as the body that should be mainly charged with architectural education. But before settling that the education by a body unconnected with the Academy could be all-sufficient, or that a severance of the present connexion would be desirable in the view of the future of any one of the arts, it is necessary that there should be as clear an apprehension as possible, first, of what architecture is, and secondly, of the possibility of the production of a class of professional men, architects, capable of realizing in practice the previous definition.

We keep the questions distinct: for they are so; and arguments of expediency, or of the demands of modern times dictating division of labour, or even of human strength and capacity, cannot make them otherwise. As in the order of the material world, it is impossible to point to the ending anywhere, of the domain of one science and the beginning of another,—so that theoretically, the knowledge of one must require and include the knowledge of all,—in the same manner *architecture* is not what it is possible to master under present conditions, or those however improved, but something of which our conception of its component parts, must be formed from no narrow views. Practical difficulty, whether of bringing the architectural education within the domain of the Academy, or of teaching to architects the drawing and modelling of the figure out of the Academy, or of harmonising educational classes held at different places, cannot alter facts of the nature of architecture, or of the disadvantages to painting and sculpture in their higher walks, from the withdrawal of the companionship of architects with painters and sculptors, and of the association of architectural education, or some of it, with painters' and sculptors' education.

Architecture, by one manner of viewing it, may be said to hold a middle position between the pure scientific construction, on the one hand, which the popular view ascribes to civil engineers, and takes to be represented by their "Institution," and on the other, the pure art which may be held to be represented by the Royal Academy. But its roots stretching one way to the utmost realizable conception of utilitarian construction, as in the case of the simplest placing of posts and planks, that ever served for passage of a river, extend the other way, to the most complete,—ay, and *phonetic*, — exhibition of sentiment through form of art, that ever required the service of masonry or bricklaying. Of the last case, what are tombs and commemorative monuments but examples? Are thousands of them which exist, and were *built*, and that could not dispense with mouldings and other architectural details, to be ever regarded as out of the field of architecture, however prominent or predominant be one of the other arts. Whatever faults have been committed by painters and sculptors, sculpture is still "the voice of architecture;" therefore the art which is the business of the architect is capable of being regarded as a phonetic art. So much by way of allusion to the evidence of Mr. Fergusson, in accordance with his well-known views; and which may be important enough to require again to be referred to.

We should admit, that rather differently to the other view of "architecture," it might be held that there is at once a science of building and a fine art of building, each marked by design, and each the refinement of simple construction, whilst each co-equal as co-present with the other in every example of the middle class between the engineering, or rather building, and the pure art.

An engineer, as we see, can build viaducts intersecting the streets of London, and a bridge across the Thames, without bringing into the works a particle of art; but the architect could not build bridges that would be architectural, that is art-works, without the use of engineering. In short, no scheme of architects' education being complete unless it include building-construction, not to say engineering; the question is, whether all that would be necessary for the education of the "engineer," and forming the scientific and practical part of the architect, could be provided for in an institution and building which is required also for service of the education of those artists who are not required to be men of science. Mr. Hardwick, asked by Lord Elcho (Question 1620), whether it might be desirable, instead of having the separate Institute for architects, to increase the number of Academicians, and bring within the folds of the Academy a sufficient number of architects, so that the necessity for the other institution should exist no longer, replied:—

"For the promotion of architecture, and for the tuition of students in architecture, I should say it would be much better to let them form their own institute, and instruct students as they are trying to do now, than to have a larger Academy."

And afterwards, replying to the question (1622) whether, supposing a school of architecture were established, four architects Royal Academicians, (that being generally the number) would be sufficient, and to the question following (1623),—how many would suffice,—he thought the four would not be enough, but said the number would depend upon the number of students; whilst he added:—

"My own feeling would be to let the architects alone altogether now, leaving them to the Institute of British Architects. That society is very flourishing; they have got their charter, and have now begun an examination of students, and it is very much better for them to teach their own profession than to be dependent on the painters, sculptors, and architects jointly."

What Mr. Hardwick meant afterwards (1640), questioned whether means might be found to form a connexion with the Academy, in saying,—"The Institute of British Architects have always access to the Academy; they have full access to the library; and upon all occasions they can attend the lectures," is not quite clear.

Mr. Scott being asked (2158) whether in his opinion the Academy should include as at present, sculptors and architects, and should not be an Academy of painters only, thinks "it is a great advantage" that the three branches of the fine arts "should be combined," and wishes they were so "more thoroughly" than they are. As to this more thorough fusion, Mr. Scott said (2159) he referred not so much to that of members practising the three arts, although that would be desirable, as to a treatment in the education of students of these arts, on more equal terms: he would desire (2162) an architectural school in the Academy: he would (2177) have the architectural students taught to a certain point, drawing and modelling, and (2178) allowed to acquire feeling for painting and sculpture prior to their devoting themselves specially to architecture. He said:—

"I think that the Royal Academy could promote the studies of students in architecture to a very great extent by educating them in those parts of the sister arts which border closely upon architecture. For instance, we none of us as a general rule are taught figure-drawing systematically; if we know anything of it, it is by accident. Now, figure-drawing is essential to the highest branches of architectural decoration; no one can really design architectural decoration in its highest form without being able to draw figures and animals. I think that the Royal

Academy could supply that want—that they could have a class of architectural students who should be systematically instructed in figure and animal drawing as applicable to architecture."

The nearly equal stress laid on modelling, with figure-drawing, deserves to be remarked.

To the question (2180) "Do you think that the want of that [the instruction generally, as requisite for painters and sculptors] has a good deal to do with those deficiencies in the decorative character of our modern buildings which have been observed in this country?" he replied,—"I do strongly think so." And again,—

"2181. You think that those deficiencies would have a better chance of being supplied if architectural students were educated in the way you have suggested?—I think so most strongly."

Lord Hardinge having received answer to a question relating to the proportion of students of the Royal Academy, who have the intention of becoming architects, put the following question and received answer:—

"2183. I take it that you would be in favour of having, as a branch school in the Royal Academy, a special school for teaching architecture generally, which would include instruction in figure drawing and animal drawing?—Yes; I should not care so very much about architecture itself; I think they would learn architecture in the abstract pretty well elsewhere; but those parts of the sister arts which border closely upon architecture (including, besides figure drawing and modelling, also decorative colouring,) I think could be easily taught them by the Academy, and with the greatest possible advantage to architecture altogether."

Mr. Tite was the principal witness, however, as to the position of the Institute, and its means of managing the education of architects and influencing public taste, and as to many other points noted at the commencement of this article. For some of these, we may have to look again to his evidence. He was favourable to maintaining a representation of architecture in the Academy, educationally, as otherwise.

A central representative body and institution for architecture and its subsidiary arts, should exist and be distinct from the Academy of architecture, sculpture and painting, but should maintain intimate relations with that Academy on the one hand, as on the other with an institution of engineers. How this object may be thoroughly worked out, will deserve careful and matured consideration. Our space does not suffice for this; and the Commission, as we have said, gave the most important question of their appointment, no attention in their Report.

THE HOME OFFICE AND THE BETHNAL-GREEN PARISH AUTHORITIES.

By direction of the Home Secretary of State, Mr. Inspector Price has prepared a report on the state of parts of Bethnal-green, which will convince all, with the exception of the Board of that neglected parish, of the necessity for change. In connexion with this matter, Mr. H. Bruce was instructed by Sir George Grey to write to the vestry clerk, inclosing the inspector's report, and requesting the consideration of it by the Board. He has also brought under their notice the large powers (which in this instance have been shamefully neglected) given to local authorities by the Metropolis Local Management Act, 18th and 19th Vict., c. 120, and the Nuisances Removal Acts, 18th and 19th Vict., c. 121, and 23rd and 24th Vict., c. 77, to deal with the various nuisances and defects which it is alleged are to be met with in some of the parishes and districts of Bethnal-green.

By the authorities at the Home Office, Mr. Price was asked these questions:—The first was if any extraordinary mortality had occurred amongst the children in the common lodging-houses or rooms occupied by families in the neighbourhood of St. Mathew's, Bethnal-green, at the present time. On this the inspector reports:—

"I beg to state that in the parish of St. Matthew, Bethnal-green, there are only eight registered common lodging-houses, which accommodate 204 persons, single men, no women or children being therein. In this parish it is the general practice to let rooms to families. The parish is very large, and densely populated. The poorer classes, namely, the costermongers, labourers, weavers, and persons who obtain their living by precarious means elsewhere, reside here. I cannot of my own knowledge state that extraordinary mortality exists at the present time amongst children in rooms occupied by families in this parish."

As regards the death-rate of both children and adults, it is always largely in excess of most other metropolitan districts.

The second question was, "If so, from what cause does it proceed?" On this point Mr. Price refers to the statement made by Dr. Moore respecting the "blood-poisoning" in Hollybush-place; and in continuation says:—"I beg respectfully to state that the dwellings of the poorer classes in this parish are greatly neglected by the owners, *several of whom are members of the vestry.* I have known information of a great nuisance given to the inspector of nuisances, which I have reason to believe was made known by him to the vestry.

The basement of houses, or underground rooms, are let and occupied by families, although not fit for human habitation; and deficient of light and air, and regardless of the numbers that are in them.

The walls and ceilings are filthy, dilapidated, damp, and unwholesome; the yards unpaved, saturated with stagnant water, and heaps of putrefied garbage; water-closets and privies deficient, and kept in a filthy state; water supply scanty, and unprovided with vessels, tanks, or butts to hold it."

Question 3. What remedy can be suggested as regards this? The inspector says that what is needed is,—"An independent supervision; visitation of the houses; powers to compel owners, lessees, &c., to thoroughly cleanse, repair, and supply sufficient well-constructed water-closets, with good and sufficient water supply; and covered dust-bins, and provisions similar to those of the Common Lodging House Act, should be enforced."

Such is the statement of Mr. Price, than whom few have had better opportunity of forming a correct opinion. For years past this officer has moved with much intelligence amongst those classes in the east of London whose condition we have so often found it to be a very painful duty to describe; and it is satisfactory to notice *that the report agrees entirely with our statement, and that the suggestions are exactly in correspondence with those we have long since made.*

Besides the above, a report from the medical officer of health of the district was forwarded from the Home Office to the vestry clerk. This gentleman suggests that the dust-bins be covered with doors and the gutters relaid; that every house be thoroughly cleansed, limewashed, and repainted; the cesspools abolished, the drains trapped and proper closets made, and water supplied to every house. He recommends that the house No. 10, Hollybush-place, in which the Ward family resided, should be thoroughly limewashed and cleansed, and that all the other houses should have a separate water supply. With regard to the cow-house of Mr. Crestell, the window facing the square in Hollybush-place ought to be bricked up, and some ventilating shafts constructed to carry off the emanations above the houses around. Reference is also made to some pigs and a pony and donkey, which had been kept in the back room of a house. Mr. Pierce, the medical officer, further reported to the vestry the state of Parliament-place,—which is bad enough,—and then a letter from Sir Richard Mayne to the vestry clerk was read, inclosing a report of Inspector Price as to the state of some houses in Nichol-street, Bethnal-green. The report stated that the back walls were damp and unwholesome, the ceilings rotten and dilapidated, the stairs and passages filthy, and the yards unpaved: no water supply or vessel to hold water; and in one instance (house No. 55) the water-closet had neither seat nor riser. At No. 55 there were four families, or sixteen inhabitants, paying 12s. 6d. a week rent. No. 59 [recently illustrated in our pages] was not fit for human habitation, paying a rental of 12s. a week.

The vestry seem to be at last becoming sensible of the disgraceful condition in which, partly through interested motives and partly carelessness, they have allowed parts of this parish to fall; and, with one hint at a slight inaccuracy said to have been made by a contemporary, seem to have borne quietly with these rebukes from the authorities of the Home Office, and adjourned the consideration of the question to a committee of the whole vestry, which we earnestly trust will not much longer continue to act contrary to right and in opposition to the general and loudly expressed voice of public opinion.

The accounts from this sadly-neglected locality continue to be of the most distressing kind. Death after death is daily taking place in consequence of hunger and poisoned air. Something must, however, be done speedily to stop the evil, which, as we have often striven to show, is far greater than is generally understood.

One of the most recent inquests was on the body of a woman, the mother of nine children, who, notwithstanding that an application was made, backed by two surgical certificates, was actually allowed to perish from want. The neighbours are all of opinion that she was starved. Dr. R. W. Wallace said that although there were indications of consumption, the stomach was distended with gas, and presented no trace of food whatever. There was a mark of congestion of the stomach from gastric juice, showing the absence of food. The jury expressed an opinion that great blame was attributable to the relieving-officer. Neglect of this kind, which is connected with the sacrifice of human life, should be attended with some greater punishment than terms of but slight reproof.

In No. 8, George-street, in this parish, a girl, aged twelve years, had died, it is alleged, from malaria. The deceased was the third child which had died in that house within a fortnight, and another one is ill. Another child who had been attacked by illness immediately recovered on being removed elsewhere. The father, a carpenter, had also been attacked with sore throat and fever—they were all affected in the same way; they were first sick, and then fever and sore throat set in. There was a very bad smell from a drain in the back parlour. In the night-time the effluvium was particularly bad; and although the landlord had done something for this, when the jury visited the house the smell was found to be most disgusting.

We might fill pages with similar accounts, in both Bethnal-green and St. Luke's.

A reform in the parish board is needed. It is unfortunately the case, that the best men for this very important office do not take the trouble of contested elections, which are not always managed in the best manner; but, after what has taken place in Bethnal-green, it is to be hoped that on the next occasion there will be persons elected on the board who will have more care for the sanitary and other conditions of the poor. The system of out-door relief should, under the circumstances, be greatly extended; whereas, the present plan seems to be to limit this as much as possible. Thousands here would be better cared for in the parish house; but the feeling against this is as strong in the distressed districts of the metropolis as it is throughout Lancashire: poor people will suffer anything rather than break up their families, and part with even the most miserable articles of furniture. To a multitude of these people out-door relief, judiciously given, would be the means of preventing continued pauperism.

Some time since, after examining with care Bethnal-green and Spitalfields, it became evident that besides the parish relief there is great need of institutions for helping those who are worthy; or instance, the Ragged schools might be usefully extended; and in connexion with these and the National schools, an extensive system of district visiting, especially by ladies, who should have means provided of furnishing tickets for bread, soup, coals, &c., should be organized. Industrial schools for girls would be of great value; and in these the use of the sewing-machine, both in the various branches of male and female costume, and inboot making. Many decent boys and girls who have fallen into the dark shadows of poverty, would find situations if they could be provided with an outfit of clothing. If a depôt for the reception of cast-off articles were opened, under good management, quantities of materials would find their way there, which might be altered and made for use, as was done in Lancashire.

The way to effect permanent good is to save as many as possible from falling into a chronic state of pauperism, and providing those whose labour has been rendered unprofitable with new means of employment. Besides the labour of promoting these matters, considerable sums of money would be required; but surely these will not be wanting for the purpose of mitigating evils which are disgraceful to the richest capital in the world.

THE LATE MR. MURRAY, ARCHITECT.

To the brief mention already made in our pages of the death of Mr. James Murray, we add a few particulars. He was born at Armagh, on the 9th of December, 1831, and was in 1845 articled to Mr. W. Scott, architect, of Liverpool. When he left the office of that gentleman, he commenced practising his profession in the same town, in partnership with Mr. Barry. When that partnership was dissolved, Mr. Murray took the share of the business lying in the neighbourhood of Coventry and settled there. Having removed to London, he, in connexion with Mr. E. Welby Pugin, executed several works both here and on the Continent. Dissolving the partnership,

STREET ARCHITECTURE, NOTTINGHAM.—*Details, Houses in Terrace Royal.*

MESSRS. WILSON, AND S. DUTTON WALKER, ARCHITECTS.

Mr. Murray returned to Coventry, where, at the early age of thirty-two years, he died.

Amongst his works we may name a mansion now erecting for Alderman Gabriel; a Gothic warehouse for Messrs. Bennock, in Bread-street, City; the new Justice-rooms and Corn-exchange of Coventry, Banbury, and of St. Alban's. These, with the churches of Warwick, Boulton, Sunderland, Newcastle, Stratford, Emscote, Birmingham, and Stortford, are but part of the buildings he individually accomplished, in addition to undertakings he carried out with his partners. Mr. Murray was interred in the Coventry cemetery, according to the rites of the Roman Catholic Church.

STREET ARCHITECTURE, NOTTINGHAM.

The accompanying engraving illustrates more at large the new houses in Nottingham of which we lately gave a general view.* The materials used are brick and Anston stone. The carving was executed by Mr. Smith, of Nottingham.

OPENING OF SWANSEA WATER-WORKS.

The new water-works at Gellygron, near Swansea, have been opened. The site is the top of a precipitous mountain. They have been constructed at an expense which is a little over 100,000*l.*, and are calculated to supply Swansea and its neighbourhood at the rate of two million gallons per day. The force is so great that water can be thrown from a hose in High-street over the highest church steeple in Swansea, without the aid of fire-engines. The reservoir, which is in a naturally formed valley, covers an extent of fifty acres. The embankment is 200 yards wide, or rather long, and the width of the base is 600 feet, and the reservoir will hold 300 million gallons of water. The conduit, which is more than 7½ miles long, has a fall of 5 feet per mile. There will be a depth of upwards of 50 feet. The water is free from mineral substance, and is said to be the clearest water in the kingdom. Mr. Rawlinson is the engineer; and Mr. Williams the contractor. The works are not yet finished.

At a luncheon partaken of at the opening, in the temporary office of the clerk of the works, the mayor proposed the health of the engineer; and Mr. Rawlinson, in his response to this toast, alluded to the sanitary aspect of the water supply of towns. It was requisite, he remarked, to view it not only as a money question, but as an absolute necessity to secure the health of every inhabitant. As a rule, the men who paid the largest rates, and who had to bear the burdens of the rates, were the men who advocated sanitary measures; whilst the men who opposed them were clap-trap speakers, who did not know what they were talking about. If what had been done that day would reduce the rate of mortality one per thousand, that would save fifty lives per annum. When the works are completed, he believed the reduction in the mortality of Swansea would be 10 in the thousand, or at the rate of 500 per annum. He could illustrate that position by reference to other towns. Take, for instance, Worthing, where the mortality was 23 per cent. in the thousand: since the sanitary arrangements had been adopted, it had been reduced to 14 per cent. in the thousand. Brighton, with its wealth and grandeur, but still neglectful of sanitary arrangements, had a mortality of 25 in the thousand. The mortality of London itself was only 23 in the thousand. The mortality of Manchester and Liverpool was at the rate of 32 in the thousand; but in Liverpool, before the sanitary arrangements were carried out, it was 44 in the thousand. Sanitary questions were now the great absorbing questions of the day. They influence society like stones thrown into the water, and the circle of their influence widens day by day.

STOCKPORT.

The town council have, at a meeting, held on Wednesday, the 4th inst., by a majority of 20 to 1, decided to carry out a complete and comprehensive system of sewerage and other works of public utility, at an estimated cost of 85,000*l.*, which amount is proposed to be borrowed, under the provisions of the Public Works Act, 1863. The plans, estimates, and other particulars have been prepared by Mr. Brierley, of Blackburn, who has been retained by the corporation as their engineer for these works.

The amount named includes the estimated cost, 20,000*l.*, of a new town-hall and public offices.

THE NEW MAIRIE AND TOWER NEXT THE CHURCH OF ST. GERMAIN L'AUXERROIS, PARIS.

"GOING ALONG."

The mention made in our first article "Going Along" of the new tower erected at the east end of the Louvre, between the Mairie and the ancient church of St. Germain l'Auxerrois, stirred the curiosity of some of our readers.* The view we now give will enable them to understand better what has been done. The Mairie, while made to match in outline and mass with the old church, has its details in the style of the Renaissance.

PARIS: THE NEW MAIRIE AND TOWER, NEXT THE CHURCH OF ST. GERMAIN L'AUXERROIS.

THE WINTER EXHIBITION.

The eleventh annual winter exhibition of cabinet pictures by British artists, now open in Pall-mall, contains a number of very good and pleasing works. Mr. E. M. Ward, R.A., sends a small edition of his "Charlotte Corday contemplating her Portrait prior to her Execution;" Mr. Linnell, sen., a large picture of "Christ and the Woman of Samaria;" Mr. Dobson a characteristic specimen, "The First Bite;" and Messrs. Desanges, A. Gilbert, G. D. Leslie, A. W. Hunt, E. Gill, Miss Osborne, Mrs. Ward, Mr. T. Carrick, and others, excellent specimens of what they can do. "The Country Auction," by Mr. J. Morgan, displays much character and humour; and Mr. Calderon's picture,—

"Drink to me only with thine eyes,"

will have plenty of admirers.

CONDITION OF LIVERPOOL.

The borough engineer, Mr. Newland, C.E., who is local surveyor under the Sanitary Act, has prepared a report to the Health Committee of the borough, on the sewerage, paving, cleansing, and other works under the Sanitary Act, from 1856 to 1862 inclusive. This report has been printed by order of the local Health Committee. It appears from it that in the six years 58 miles 796½ yards of sewers have been constructed, at a cost of 127,153*l.*; besides 30 miles 1,195 yards of court and passage drains, of 12 and 9 inches diameter, at a cost of 26,453*l.* The total length of sewer made since 1847 is 115 miles 774 yards. The number of new gullies constructed in streets during the six years is 1,558; in courts and passages, 205; gullies trapped, 2,527. In cleansing the sewers only 6,353 loads of rubbish have been removed, and 2,576 loads from the gullies. The number of street houses drained during the six years is 23,599; of court houses, 4,684; and of courts, 997. The number of streets built during the six years is 218; length, 16 miles 334 yards.

Special attention is drawn in the report to the peculiarities and the condition of the courts for which Liverpool is so notorious. Of the majority of these nests of disease, Mr. Newland says:—

"The houses are generally built back to back: one end of the court as a rule is closed either by houses, or, which is worse, by the privies and ashpits; or, a worse state of things still, the privies and ashpits are placed at the entrance of the court, and the only air supplied to the inhabitants must pass over their foul contents. But even this miserable state of things can be outdone. There are courts, which, by a perverted ingenuity, have been formed in the following manner:—An ordinary street house has had its lobby converted into a common passage leading to the back-yard. The passage is of course roofed over, and is, in fact, a tunnel from which the back room of the original house, now converted into a separate dwelling, has its entrance. The back-yard has been filled with other houses in such a manner as to have only the continuation of the tunnel for access, and from this little area of 3 feet wide the houses receive their supply of light and air. The passage is generally terminated by the privy and ashpit common to all the wretched dwellings, with its liquid filth oozing through their walls, and its pestiferous gases flowing into the windows of the two last houses. The structural evils of these miserable abodes are aggravated by the filthy habits of the occupants. 'What is everybody's business is nobody's business,' and so the duty of keeping the court and its conveniences clean is neglected. Even when the middens have been filled so as to overflow the court, no one cared to take the trouble to apprise the officers of the nuisance department of the fact in order to their being emptied.

For this state of matters the owners of the property could not provide a remedy. They had no power to enforce cleanliness. Under the Sanitary Act, however, the council possessed this power, and resolved to exert it. A special subcommittee was formed: bye-laws were framed: notices were printed and posted in every court and alley throughout the borough; and two inspectors were appointed to carry out the wishes of the committee. The inspectors began by arranging among the inhabitants of each court their turns of duty in cleansing it, and on failure or neglect they summoned the whole of the parties before the magistrate. They had some little difficulty at the outset in identifying the people and the houses they occupied. The courts were not properly numbered: the houses in the courts were not numbered at all. This was promptly remedied.

A short experience proved that a great amount of good was done by this new staff at an inconsiderable cost, and the committee resolved to increase it by giving each of the inspectors an assistant.

To those not conversant with the subject, it may appear that the evils of this court and alley life are exaggerated in the foregoing statement, and that the means taken for their mitigation are excessive. But let any one glance at the analysis which follows, and then take into consideration the facts as there set forth, that in the borough there are 3,173 courts containing 18,610 houses; that the average number of houses in a court is 5·86, and the average number of inhabitants to a house is a fraction more than six; and it will be found that upwards of a fifth part of the population of Liverpool is condemned to live in these morally and physically unwholesome dwellings."

NOTES ON THE VENTILATION OF INTERIORS.

It has struck the writer—particularly lately—that a great deal yet remains to be done respecting the ventilation of interiors in which large numbers assemble for several purposes. He was particularly impressed with this after visiting several national and ragged schools, in which there were, in some instances, windows at each side, and the space was considerable. The windows were open at the top, but, notwithstanding, there was the taint of that heavy gas which is suggestive of typhus fever. Even in the new Courts of the Clerkenwell Session-house, which have been only recently constructed, this fault is to be found. In churches, some of them not of old date, especially on Monday mornings after the congregations have occupied the places on the Sundays, this poisonous ingredient may be found in dangerous excess; and it seems to be caused to a great extent by the attention which is shown to the passing of currents of fresh air through the upper parts, and neglecting the lower: by this means the heavy gas is allowed to lodge in quantities near the floor. The same fault will be often found in concert and ball rooms, and in theatres, in some of which the "gods" are better ventilated than the grave and substantial visitors to the pit.

In many private and other houses there is often neglect of ventilation below, especially in bedrooms.

THE RAISING OF HOLBORN VALLEY.

A special Court of Common Council was held on the 6th inst., at the Mansion House, for the purpose of receiving a report from the improvement committee upon this subject, and also to consider as to steps for a bill in the ensuing session of Parliament, for effecting the improvement.

The Lord Mayor presided, and there was a very full attendance of members of the court.

The report of the improvement committee stated that eighty-four gentlemen had sent in 105 designs, illustrated by 206 drawings and 13 models. The committee felt it desirable to secure the assistance of a professional gentleman, competent to place before them the varied points of detail necessarily involved; and believing that Mr. William Haywood, the engineer and surveyor to the commission of sewers, was peculiarly qualified for this duty, they invited him to undertake the same, and he thereupon withdrew a design which he had sent in, and at once acquiesced in the wishes of the committee. A careful and personal examination of every design sent in was made, and it was resolved to set aside a certain number of them which, in the opinion of the committee, did not comply with the several conditions, as set forth in the advertisement. The designs remaining for consideration were thus classified in Mr. Haywood's report:—Class No. 1. For constructing complete viaducts of high-level roadways upon the line of Holborn-hill and Skinner-street, involving the entire removal of the present surface and the property on both sides. Class No. 7. For high-level streets or viaducts passing south of Holborn-hill and Skinner-street, which thoroughfares are to remain as at present, or with but very trifling modifications. Class No. 8. For high-level streets or viaducts passing north of Holborn-hill and Skinner-street, which thoroughfares are to remain as at present, or with but very trifling modification. Class No. 9. For improving the present gradients, by partly filling up the valley and forming the approaches in Farringdon-street and Farringdon-road by inclinations. The committee, after serious deliberation, resolved to submit to the court the following designs, which represent the principles embodied in each of the four classes:—Class No. 1. Three designs—No. 4, by Mr. Frederick Marrable. No. 32, by Mr. Thomas Charles Sorby. No. 68, by Mr. Richard Bell. Class No. 7. Three designs—No. 3, by Mr. Lewis H. Isaacs. No. 33, by Mr. Frederick Wallen. No. 61, by Mr. J. Wormald. Class No. 8. Two designs—No. 3, by Mr. Lewis H. Isaacs. No. 74, by Mr. William Parkes. Class No. 9. Two designs—No. 35, by Mr. J. T. Atkinson and Messrs. Brandon & Freshwater. No. 35a, by ditto, ditto.

Returns embodied in Mr. Haywood's report show that upon an average upwards of 4,200 vehicles per day go up and down the hills from the low levels.

The committee submitted the following unanimous recommendations for adoption by the court, viz.—"1stly. That the plan to be carried out in effecting the contemplated improvements be upon the principle adopted in the designs in Class No. 1, viz.:—'For constructing complete viaducts or high-level roadways upon the line of Holborn-hill and Skinner-street, involving the entire removal of the present surface, and the property on both sides.' 2ndly. That it be referred back to your committee to prepare and submit to Parliament a plan upon the principle adopted by the court, but with such modifications as may be found necessary. 3rdly. That we should be empowered forthwith to give the necessary notices, and generally to take such steps as may be expedient for prosecuting, in the ensuing session of Parliament, a Bill for effecting the contemplated improvements. And 4thly. That we should be authorized by the court to consider to which authors the premiums of 250*l.* and 150*l.* respectively should be awarded, and to report our opinion thereon."

Deputy Fry, in bringing up this report, explained that the committee had reduced the number of plans to 38: this number they divided into nine classes; and they afterwards reduced this number to four. By the plan recommended by the committee, he said, Skinner-street and Holborn-hill would be entirely removed, and a fine new street erected from Newgate-street to Hatton-garden, or higher up, if necessary, upon the high-level road. He concluded by moving that the report of the committee should be agreed to.

The Town Clerk put the motion to the court, which was at once unanimously agreed to.

NEW CO-OPERATIVE STORE.

The foundation stone of another co-operative store for Manchester was laid in Downing-street, London-road, on Saturday, by the Mayor (Mr. A. Heywood). It will form the central store of the many valuable buildings belonging to the Manchester and Salford Co-operative Society, who will build it at an expense of 2,800*l.* A new feature will be the addition of a working men's institute. The building will have a frontage in Downing-street of 70 feet, by 60 feet deep. The style of architecture will be Lombardo-Italian. The basement story will be occupied as a bakehouse, with vaulted ceiling, and the fore part as a storeroom for heavy goods. On the ground floor there will be three large shops, with a warehouse, and the manager's office at the rear. The front entrance from Downing-street will lead to the rooms above. The floor will be paved with Minton tiles. On the first floor there will be another warehouse, and a library and reading-room for the use of the members. The upper room will be used as a meeting room, capable of holding upwards of a thousand persons. Out of this entrance will be gained to several small ante-rooms. The front is of red stock bricks, with black bricks in bands and voussoirs of arches, the cornices and pediment of buff moulded brick and stone. The shop fronts are carried by cast-iron panelled box lintels and standards, the roof timbers of the large room are stained and varnished. The building is expected to be completed by March next. The architects are Messrs. Pennington & Bridgen, Manchester, and the builder, Mr. Johnson, of Ancoats. The ceremony on Saturday commenced shortly after three o'clock. The mayor said this was the first institution of the kind ever erected by a co-operative society in Manchester. He had for a number of years been connected with the exertions and labours of working men, and he hoped this last labour of his municipal office would far transcend any act which might have been connected with the history of the working classes. Co-operation he believed to be yet in its infancy. It had not yet been properly understood by the working and

middle classes; but he felt persuaded that when it was comprehended and clearly understood, the objections which were now entertained by them would gradually and visibly disappear. Mr. J. C. Edwards stated that the society had been in existence four years and a quarter; and that the net profit out of the business during the whole of that time would pay for two such buildings as the one which was to be erected on that spot.

GRAND CENTRAL TERMINUS IN GLASGOW.

THE project for forming a grand central terminus in Glasgow, by which the five railways entering the city will be brought into communication, is now taking shape; and shortly, we hear, the whole details of the undertaking will be authoritatively announced. The Caledonian and the South-Western already touch each other at Shields Bridge, on the south side of the river, and the Sighthill Branch of the Edinburgh and Glasgow and the main line of the Caledonian are within a very short space of each other in the north-east quarter of the city. These two points, therefore, form the limits of the "City of Glasgow Union Railway," which is now projected, and which will traverse a total length of about six miles. The Central Terminus will be formed in the dreary wilderness of wynds, closes, and tumbledown tenements,—nests, for the most part, of disease, crime, and wretchedness, which lie betwixt Stockwell-street and King-street; and the line will debouch by a spacious approach on the Trongate, near the foot of Glassford-street. The new railway, without crossing Trongate or marring in any way that great thoroughfare, will pass over the Saltmarket near the Cross, and the mouth of the Gallowgate, and traverse another overcrowded and dilapidated quarter of the city betwixt that point and the south-eastern corner of College Gardens, to Wellpark, where another great station will be formed for goods and cattle traffic. There will be no tunnelling, says the local *Morning Journal*, in announcing the project; no overturning of valuable properties, no superseding of existing seats of business, no disfigurement of splendid streets or interruption of beautiful vistas, and no quarrels with the Admiralty. It is to be hoped the merits of the new project will not be merely negative, however; and that amongst these negatives "no architecture" will *not* figure. Mr. Walter Macfarlane, of the Saracen Foundry, of whose meritorious efforts, by example at his business premises, to improve the city architecture, our readers are already aware, has written to the paper just named, expressing a hope that the Union Railway Company will combine with their engineer an architect of eminence, and not, from a narrow and ill-judged economy, centre in one individual the onerous duties of both architect and engineer.

THE LYTTELTON TUNNEL, CANTERBURY, NEW ZEALAND.

IN May, 1861, the Provincial Government accepted a tender from Messrs. George Holmes & Co., of Melbourne, to complete the line of railway from Lyttelton to Christchurch, except the stations, in five years, ending June 1, 1866, for 240,500*l.*; the cost of the tunnel, 2,838 yards long, being fixed at 195,000*l.* The tunnel is nearly a mile and three-quarters in length, and is being bored through the crater wall of one of the extinct volcanoes of Banks' Peninsula. The town and harbour of Lyttelton will thus be connected with the Canterbury Plains. The volcanic formation often presents basaltic rocks of the hardest description, against which the machinery employed at Mont Cenis would be powerless. The engineer has adopted a uniform gradient of 1 in 283, the upper end of the tunnel being kept free from water by constant pumping. The work employs 180 men, and the engineering staff consists of the Government engineer and a single inspector. The tunnel is contracted for at somewhat less than 70*l.* per lineal yard. The contractors, in the two years ending July 1, 1863, have advanced 1,086 yards, which is at the average rate of twenty-two yards per month at each end. The tunnel is 15 feet wide, and 18 feet high above rail level. The works have been, from their commencement, under the superintendence of the provincial engineer, Mr. Edward Dobson, who has recently resigned the management of the public works, in order to be able to give his undivided attention to the tunnel. The Provincial Government of Canterbury obtained an Act in 1860, enabling them to raise a loan of 300,000*l.*, for the construction of the railway; but, up to the present time, the whole cost of this railway, as well as of other public works executed since the establishment of provincial government in 1853, amounting in round numbers to nearly 400,000*l.*, has been defrayed out of the current revenue of the province.

MANCHESTER ARCHITECTURAL ASSOCIATION.

THE opening meeting of the session was held at the Rooms, 15, Dickinson-street, on Wednesday evening last, the 4th inst. The president delivered the opening address, and in the course of it alluded briefly to the many points of interest which would probably arise during the ensuing season, and congratulated the members on the hopeful prospect of renewed vigour and activity indicated by the list of papers in preparation for the winter.

The hon. secretary, Mr. Walker Aitkin, then explained the means adopted by the committee, and their success in obtaining papers of more than ordinary interest, and of such scope as to meet the requirements of all the members. Among the list may be noticed the following:—

"On the Creation of a New Style;" "Detail in its Inherent and Relative Proportions;" "Symbolism;" "Church Architecture of the Present Day: its Position and Requirements;" "Competitions, with a Proposed Plan for obviating the Evils at present resulting therefrom;" "Colour in relation to Architectural Decoration;" "A Proposed Plan for Equalizing the various Systems of Measurement now in use;" "On the Transfer of Land and the Law of Contracts;" "Stained Glass;" "Concrete," &c. &c.

After discussion on the various subjects brought forward in the address, the meeting closed.

CHURCH-BUILDING NEWS.

St. Pancras.—St. Jude's Church, Gray's-inn-road, has been consecrated. The edifice is situate in a very populous locality on the east side of Gray's-inn-road, near the Colonial Training School. It has a nave, and north and south aisles, each 85 feet long and 56 feet high. The chancel is 35 feet long and 22 feet wide. The style, from the design of Mr. J. Peacock, of Bloomsbury-square, the architect, is of the Early Decorated period, and the church is lighted chiefly from a clerestory of twenty-four windows and a large western window. The tower stands at the east end of the north aisle, and is 100 feet in height, with an arcade lantern, terminating in gabled roofs, with an iron finial in the centre. The edifice is plain. The walls are built with stock brick; the internal walls faced with white brick, with bands of red and black. The columns of the nave are of red Mansfield stone, resembling polished granite. The arches are of Bath stone, and all the columns of the chancel are of marble. The east windows are filled with stained glass, and represent the Birth, Crucifixion, Resurrection, and Ascension of our Lord. The entire details have been carried out by Messrs. Carter & Sons, of Holloway, the builders. The church is entered from the west by a cloister. The seats, which are open timber benches, will accommodate 900. The entire cost is about 5,000*l.*, exclusive of the purchase of the ground, about 3,000*l.*

Woolwich.—The new Garrison Church on Woolwich Common has been consecrated. The edifice, which is named St. George's, is in the Byzantine style, from the design of Messrs. Wyatt. The officers of the garrison have subscribed nearly 1,000*l.*, for its interior decorations, and an organ, &c. It contains a stone pulpit, coloured glass windows embodying the most marked events in the life of our Saviour, and the ceilings and galleries are decorated.

Oswestry (Salop).—The chapel erected at the Grammar School for the use of the boys has just been completed. The plan resembles that of a college chapel. Externally, the rapid fall in the ground from west to east has added to the general effect of the building. The interior is fitted with three rows of oak stalls, returned at the west end, and affording accommodation for about 130 boys. The roof is open-timbered and tiled. Eastward of the stalls is a pavement of Minton's tiles, which are used, with marble, in the reredos. There is also some incised work in the apse, the centre window of which is intended to be filled with Hardman's glass, by Mr. John Donne. The lectern, of oak, inlaid with coloured woods and Derbyshire spars, is the gift of the boys. The walls are built of Cefn stone, with dressings and bands, &c., of Shelvoke, the interior being lined with Shelvoke stone. The style is Early Geometrical. Messrs. Treasure were the contractors; and the architect was Mr. E. Haycock, jun., of Shrewsbury. The chapel is provided with a warm-air apparatus, by Mr. Dodwell, of Shrewsbury. The greater portion of the expense has been borne by the head master, but funds are still needed.

Wichenford (Worcestershire).—After extensive restoration, Wichenford church has been re-opened. The edifice had been originally built in 1262, and dedicated to St. Lawrence. It consists of a chancel, nave, porch, tower, and spire. About sixty years ago the spire becoming unsafe, it was pulled down, and an unsightly brick substitute was built by the village mason. This has now been removed, and a spire of about 100 feet in height, of red sandstone, erected in its place. A new porch and vestry have been added, four new windows inserted, including a stained-glass window at the east end, by Messrs. Chance, of Birmingham. An open timber roof, in lieu of the low plastered ceiling, a new stone pulpit, lectern, stalls, altar, reredos, &c. have been supplied. The old gallery at the western end has also been taken down, and increased accommodation secured by open seats in place of the old pews. The exterior sandstone has been cleaned, and various other restorations effected. The contractor for the restoration was Mr. Hicken, of Wichenford. Mr. James Hurn, of Worcester, was the builder; and Mr. Shepherd, of Martley, the carpenter. Mr. Perkins, of Worcester, was the architect employed.

Sevenhampton, near Highworth.—A new church, erected in this village at the sole cost of Mr. Joseph Sewell, of Cirencester, as a memorial to the late Lady Wetherell Warneford, has been consecrated by the Bishop of Gloucester. The new edifice was planned by Mr. W. Pedley, of Highworth, architect; and the works were carried out by Messrs. Pedley & Son. Mr. Sewell defrayed the entire cost, between 3,000*l.* and 4,000*l.* The Early English style has been adopted. The pulpit and font are of Caen stone, and have been carved by Mr. Geflowski; and the church is paved with Minton's encaustic tiles. There is a tower at the west end, containing a peal of six bells, including a new one from the foundry of Messrs. Mears, of London.

Carno.—From a report in the *Shrewsbury Chronicle*, it appears that a committee has been appointed at a public meeting, to carry out the restoration of the parish church of Carno; Mr. J. W. Poundley, of Kerry, being requested to inspect the church and prepare plans and estimate for another meeting.

Coventry.—The parish church at the village of Allesley, near this city, has been reopened. The church has undergone alteration and enlargement. The north and south aisles have been widened and lengthened; a new chancel built; two new east windows put in; the north and south galleries taken down, and the church reseated. The Gothic pillars of the old edifice, and also the stone walls, have been scraped; the organ re-built; and indeed the entire edifice has undergone a process of renovation. The alterations were planned by the late Mr. Murray, architect, and carried out by Mr. Mault, of Coventry, builder, at a cost of about 2,000*l.*, of which sum the parishioners of Allesley have contributed nearly one-half.

Ringstead (Northants).—The parish church here has been restored and reopened. The state of the church before the works now completed were taken in hand, was wretched and dangerous, the chancel arch and part of the south wall being ready to fall. The roofs also were in a bad state, the tower arch was blocked up, and the entire area was filled with ill-arranged and unsightly pews: the soil against the walls, too, had accumulated so as to render them very damp. The tower and spire were sunken and fissured. The structural works were first taken in hand; viz., the rebuilding the chancel arch and portion of the south wall and buttress of chancel, and north wall of aisles, and the tracery of the east and part of the south windows were taken out, reset and restored. The roofs throughout the church were also renewed in deal, following the type of the old Third Pointed Flat roofs, and covered with lead. The clerestory windows were opened and portions of the wall restored and the parapets reset. A drain was also formed round the walls. The church was thus put in a state of repair, but a great deal remained to be done before it assumed its present state. For this a second contract was taken. The spire was taken down to the level of the sills of the upper lights, and rebuilt, with a new vane executed by Mr. Potter, of Northampton; the tower walls were made good and underpinned, and new floors of deal inserted. The walls of

chancel and chantry, the internal stonework, &c., were cleaned and restored, and the walls replastered. The whole of the old pews and gallery were cleared away, and the church has been reseated with simple seats of deal. In the course of the restoration some paintings were discovered in the south wall of the nave, but they were so mutilated it was impossible to preserve them. The contracts for the whole of these works, including pulpit and chancel seats (the carving of which was done by Mr. S. Poole, of London) were taken by Mr. Parker, of Thrapston; and the whole of the restorations have been carried out by him from the designs and under the superintendence of the architect, Mr. William Slater, of London.

Warter (near Pocklington).—The new church of St. James, Warter, has been consecrated by the Archbishop of York. The edifice was founded at the expense of the late Lord Muncaster. The cost of the edifice was estimated to be from 3,500*l.* to 4,000*l.* It was commenced two years ago, and occupies the site of the old building, but extends beyond it both southward and [eastward. The parish church of Warter formed a part of the ancient priory, and the undulations of the surrounding ground indicated the existence of sundry foundation walls. Nothing of especial interest, however, was discovered in excavating for the new church except a few capitals, shafts, and bases, with rough stones bearing marks of age, and some almost illegible carving. The new church consists of a tower and spire, 120 feet high; nave, 60 feet by 33 feet 6 inches; and apsidal chancel ascending over steps from the nave. The lower part of the tower forms a baptistery, and the font, pulpit, &c., are enriched with carving. The paving throughout the church is plain encaustic, and enriched on the chancel. This was executed by Mr. Colla, of London. The west window is filled with stained glass, the subjects being the baptism and ascension of Christ. Mr. C. Gibbs, of London, was the artist, who has received orders to fill all the chancel windows with stained glass. Each window in the nave has cathedral glass with a painted ball-flower border—yellow on dark blue. There is throughout the church a prevalence of the ball-flower enrichment, which was a favourite with the late Lord Muncaster. The style of the church is Geometrical. The roof is open to the ridge, all the timbers being stained and varnished. The joiner's work is pitch pine, and varnished only. The pews are open. The work of erection has been carried out by Mr. R. Weatherley, of York, builder, under the direction of Mr. Waterhouse, clerk of the works. The architects were Messrs. W. G. Habershon & Pite, of London, under whom extensive alterations are in progress at Warter Priory, adjacent, the residence of Lord Muncaster, the brother of the late lord. Exclusive of the builder, the other tradesmen who have been engaged at the church were Mr. Rawlings, of York, the plasterer; Mr. R. Pearson, of York, the painter; and Mr. Hodgson, of York, the plumber. The carving was entrusted to Mr. Earp, of London; and the apparatus for warming the church was supplied by Mr. Walker, of Bedale.

STAINED GLASS.

St. Helen's Church.—The new decorated eastern window of this church has just been completed, and the stained glass in the head tracery, to the memory of the late Rev. J. H. Wilding, has been inserted. The principal subject is the "Ascension," from a design by Mr. Preedy, architect.

St. Andrew's Church, West Tarring, Worthing (Sussex).—A memorial stained-glass window has just been erected in the tower of this ancient church, at the sole cost of the vicar, the Rev. John Wood Warter, B.D., and executed by Messrs. Thomas Baillie & Co., of London. The subject selected is the "Resurrection of our Saviour." The window contains three principal openings, with a tracery, and is of the Perpendicular style, although the principal part of the church is Early English in character: in the centre opening is the figure of Our Lord rising from the Sepulchre: on the right of Our Lord are the women bringing spices, &c. On the opposite side the Angel, having rolled back the stone from the door, is seated upon it. In the foreground are represented the Roman soldiers: in the tracery lights are shields containing emblems of the Crucifixion, and across the bottom of the window are the inscriptions, with the names, &c., of the various relatives of the vicar, to whom this window is intended as a memorial.

St. Michael's Church, Coventry.—Two memorial windows have just been placed in the north aisle of this church. In the first window the subjects illustrated in the tracery are from the creation, viz., "God creating Man," "Adam naming the Cattle," "The Creation of Eve," "The Serpent's Temptation," and "Adam and Eve hiding themselves from the Presence of the Lord." The fourteen openings beneath continue the Scripture narrative, the subjects being, "Adam and Eve driven from the Garden of Eden," "The Curse of Man," "The Death of Abel," "Noah building the Ark," "Noah's Sacrifice after the Flood," and "Noah cursing Ham." In the tracery of the second window is illustrated the subject of "The Confusion of Tongues;" and in the openings beneath are, "The Parting of Lot and Abram," "Melchizedeck giving Bread and Wine to Abram and to the Men who were with him," "God's Promise to Abram," "Abraham offering up his Son Isaac," "Jacob obtaining by Fraud his Father's Blessing," and "Jacob's Dream." A third window in this aisle was erected some time since, to the memory of his late Royal Highness the Prince Consort, and illustrates the history of Moses. Two other windows in this aisle remain to be filled, and it is proposed to continue the subjects. The window at the east end contains the subject of the Ascension, and is a memorial to the late Colonel Hood, who fell at Sebastopol. All these windows have been executed by Messrs. Heaton, Butler, & Bayne, of London.

St. Margaret's Church, Leicester.—Two large stained-glass windows, the gift of the late Mr. Edward Highton, civil engineer, are about to be placed in this church, one each at the west end of the north and south aisles. For the new stone work, from a design by Mr. Scott, three masons of the town were selected by the Church Restoration Committee, and invited to tender, viz.—Messrs. Osborne, Mr. J. H. Johnson, and Mr. J. Yates, the tender of Mr. Yates having been accepted. These windows will displace two deformities of the Batty Langley style and date of architecture, long a just cause of complaint to the archæologist as disfiguring the edifice.

Yardley Wood Church, near Birmingham.—A memorial window, executed by Mr. Holland, Warwick, has been erected in this church. It contains figures under canopies, representing Faith and Hope, with diapered backgrounds.

PROVINCIAL NEWS.

Brighton.—The Albion out-fall is completed so far as it can be proceeded with at this season of the year. The chambers have been arched over, and the bricklayers discharged. The further extension of the out-fall to its complete length of 1,700 feet must await a more favourable season.

Earith.—The Rev. J. Linton, at the Hunts Sessions, presented the report of Mr. Barlow, the engineer employed to examine Earith Bridge. That gentleman recommended that a new bridge should be erected at an estimated cost of 1,000*l.* or 1,200*l.* It appeared Mr. Rowe, the Isle of Ely surveyor, agreed to this recommendation; and the Sessions agreed that it should be carried out, care being taken that the girders be of wrought iron, instead of cast iron.

Cheltenham.—Since the manor was purchased by Mr. R. S. Lingwood, a corn exchange has been erected, at considerable cost, in the Market-place. The room is larger than any other in the town, and will probably be also used for public amusements, as well as for business of the manor and of the borough.

Cirencester.—The completion of the Corn-hall, and the renovation of the King's Head Hotel, have improved the Market-place. The Corn-hall has been erected from the design of Messrs. Medland & Maberly, by Messrs. Jones & Sons, builders. The carving was done by Mr. William Forsyth, of Worcester. The hall, which is in the Italian style, is to be used for various purposes, including the School of Art, the Cirencester Permanent Library and Reading Room, the Mechanics' Institute, &c. The renovation of the King's Head Hotel has been carried out by Mr. Thomas Bridges, of Cirencester.

Bristol.—Tenders have been received for the erection of the Colston's hall, St. Augustine's-parade. The tender of Messrs. J. & J. Foster, amounting to 17,000*l.*, has been accepted. The building will be forthwith commenced, and it has been decided to erect two of the largest warerooms in Bristol underneath the great hall, there being 18,000 square feet available for the purpose. ——The first rail of a tramway from Temple Meads to the Quays, in connexion with the railways, has been laid.——The foundation-stone of a new factory, about to be erected in Quay-street, for Messrs. Walsh & Co., adjoining the present warehouse, has been laid. On excavating for the foundation of the new building, at a depth of 11 feet from the surface, there were discovered evident remains of the old city wall. The architect of the new building is Mr. H. Masters; contractor, Mr. R. M. Bryant; and master mason, Mr. T. P. Wilcox. By the liberality of Mr. Walsh, the workmen engaged upon the building were regaled with a substantial repast, at the Greyhound, Broadmead.

COMPETITIONS.

Ringwood Congregational Church.—In answer to advertisements in our columns, forty designs were sent in, although no premium was offered, and the amount to be expended was limited to 900*l.* Among the designs were several from well-known firms in the North of England and Ireland. Three were selected for final decision, respectively by Mr. T. C. Sorby; Messrs. Pritchett, of Darlington; and Mr. Rumble, of Newbury; and eventually, at the general meeting, the design by Mr. T. C. Sorby was selected, and is to be carried into execution forthwith.

Bridge at Hull Competition.—Sir: Can any of your readers throw light on the subject of the proposed new North Bridge at Hull? More than four months ago the corporation received thirteen sets of plans in answer to advertisement, and I cannot learn whether they have taken a single step in the matter.—A Competitor.

WHO BUILT OUR CATHEDRALS?

The writer of the article which appeared lately, p. 694, in your journal, with this heading (it should have been "Who designed our cathedrals?"), has opened a question that has occupied my attention for some time, and of which in two papers I have endeavoured to form a solution derived from the voluminous notes collected during the course of several years' study. A few weeks earlier, p. 564, you gave Mr. J. H. Parker's paper "On the Buildings of Bishop Gundulph," and it is upon it that I now more particularly desire to offer a few comments. Mr. Parker prefaces his observations by stating that the bishop "has been long known to have been one of the chief architects of his day, and to have been employed by the king to build the White Tower in London." Had this notice of him been worded, he "has been long known as one of the chief architects of his day," I should not perhaps have troubled you, but taken it as a fact, however little authority there may be as to his having been an architect at all. I am not aware of any ancient statement that Gundulph was an *architect* or *designer*. He *built*, certainly, and, in common parlance, might even nowadays be termed a *builder*, in that sense.

Was Gundulph "employed by the king (William I.), to build the White Tower?" I believe the only proof that he had any connexion with that work, is the line in a grant from a citizen, whilst Gundulph "*ex præcepto regis Willelmi magni præesset operi magnæ turris Londoniæ.*" Is this sufficient evidence from which to draw the above conclusion? Stow, to my mind, more properly put the case when he quoted those words, and wrote that "William—built the Tower of London—about 1078—appointing Gundulph—principal surveyor and overseer of that work." Supervisor and overseer being synonymous for director, and not as representing artistic talent. The term "commissioner" would be still better.

The study given by me to this point of a very interesting subject, has caused me sometimes to explain my meaning to my friends in the shape of the following romance, the general tenor being as applicable to Wykeham and others as to Gundulph:—The king (I take Rufus, it does not much matter which) says to himself one morning, "Confound that obstinate dog Odo, why can't he be quiet and leave me at peace to study the peaceful arts of commerce, and create an International Exhibition? If I must take up arms to put him down, I'll give him a settler, and kindly ask my dear friend Hubert [Odo's mortal enemy, of course] to take care of him in my castle of ——. Ah! but where? I want a Keep sufficiently strong to keep him. What can be done? I must set to work directly: let's think: my master masons are very busy at my palace here; can't disturb them, or I shall not have a roof over my own head next. [He might then have called for his 'clerk of the works,' but that was a later institution.] I'll speak to Lanfranc; he was my father's best friend. Yes! oh, I know the man! He spoke of Gundulphus the other day as one deserving of notice for his '*prudentissima sæcularium rerum administratio*;' and I know his '*sanctissima*

religio;' he can look after my interests, he has looked so very well after his own! and I'll tell my master ingeniator to assist him with better sizes and strength of walls—that last little Keep I built would not stand a month's siege;—and, as I lately ordered my dining-hall to be 15 poles long and 4 poles wide, inside however, I shan't have a castle of less noble dimensions. I'll make him Commissioner of Works for the purpose: it will please him to see his name in the *Gazette*: and we'll find him a room in Whitehall-place, and he may write up 'Commissioner for Building Keeps' on the door-posts, and get his name into the Civil Service list. All right." So off Rufus sends a bit of parchment to Rochester, and up comes Gundulph by the next boat to Rufus, who greets him with, "I say, dear fellow, I hear you are '*in opere cæmentarii plurimum sciens et efficax*' [which, freely translated, means "up to all the dodges of a mason's contract,"] will you kindly take this little matter in hand for me? It will not detain you long from your monastery. Here is your authority to get the workmen and materials where and how you can. I will send you the money as often as possible—[no, he does *not* say that, only thinks it; but adds]—You will be paymaster, and look sharp after the building operations, that I am not cheated. It is quite impossible for me to speak to those villein workmen, so when you want any orders you must come yourself. I'll look in occasionally. But be quick, for I am off to catch the villain to put into the Keep, and I will give you one of his best advowsons for your trouble." That is the position I conceive Gundulph held with the monarch; and it was the same with Wykeham. What would Mr. Scott say at being called the clerk of the works at the Foreign Office, but the Hon. Mr. Cowper the architect? As regards Gundulph's position with the designing of his ecclesiastical buildings, it is now well known that every large monastery had a staff of workmen, headed by the master mason and the master carpenter; while the assertion that they made the designs for their portion of the works can, I think, be supported. It is to be doubted whether the chief man made *all* the designs; the glass-painter, for instance, submitted to no other person's control.

Mr. Parker goes on to say that "the history of his [Gundulph's] life clearly shows that he had every opportunity of acquiring the best information, and we may fairly conclude that he possessed all the knowledge and skill that any one possessed in his time." I have carefully read the accounts concerning Gundulph, but have failed to find any authority for all this. Naturally, "we may conclude" anything from many of the vague statements of the old historians. Gundulph was born, if I remember the accounts correctly, at Rouen, where he studied grammar (take this in its fullest meaning), became acquainted with Archdeacon William, was introduced to Maurilius, accompanied William to the Holy Land, became a monk at Bec, went with Lanfranc to Duke William's monastery at Caen, came over to England with Lanfranc, and obtained the bishopric. Can much more be said about him, *as facts*, up to that period? Of course "we may conclude" a great deal from some of this. How in the Holy Land he first became acquainted with, and was initiated into, the deep and mysterious arcana of Freemasonry! How at Bec he worked his way, from early dawn to past midnight, as a fellowcraft; becoming a master mason when he arrived at Caen, fully qualified to import into England all the knowledge of the craft of Normandy, and to establish an opposition grand lodge at Rochester, in spite of the native Saxon or Anglo-Norman masons then at work!

I refrain from commenting on the remainder of the really interesting and valuable contribution, because all my remarks must depend on the view taken in the first instance; and I throw out these observations for such criticism as Mr. Parker may think they deserve, hoping that we may yet obtain, by further research, some more satisfactory evidence of the employment, or otherwise, of churchmen as *designers* than we at present possess.

Will your antiquarian friends give me, or tell me where to find, some reliable information on the question of value of ancient money in the present day? I know it is a very difficult subject, but it is one that ought to have been set at rest before now. Mr. Parker takes the 60 *lbs.* as worth about twenty-five times more. But is it *£s.* or *lbs.*? And if *lbs.*, what is it *lbs.* of? I believe Mr. Arthur Ashpitel has been the earliest to inquire into this point, when commenting on the tower at Rochester at a meeting of the Kent Archæological Society, a few years since; but I know not with what result, except that of suggesting "*lbs.* of silver." *Libras* is the word used, and in the present case, "60 libras."

WYATT PAPWORTH.

TIDAL FOUNTAINS FOR THE THAMES EMBANKMENT.

At a time when so many important improvements are contemplated in the metropolis, and so great a work as the Thames Embankment is about to be executed, allow me to suggest, through the medium of your columns, a way in which tidal fountains may be erected, in connexion with the latter, at a very small cost.

Shallow tanks of the requisite size, constructed immediately under the roadway of the embankment, with inlet openings above them leading from the river, and outlet-pipes below leading to the fountains, include the whole of the necessary mechanical arrangements.

The fountains might be designed to represent mermaids pouring water from pitchers, dolphins spouting water, or in any suitable form, placed, for instance, on the intermediate or on the lower pedestals of the landing-stairs.

The tide would flush the tanks full at high-water, and on its ebbing the fountains would gradually appear above the surface, in action by gravitation, and would remain so until the water rising again hid them from view, and again filled the tanks.

In this way fountains might be constructed rivalling in grandeur the new one of St. Michael, in Paris, while the tidal water supply would cost nothing.

W. LEWIS BAKER.

MODERN CLASSICISM.

SIR,—Much as they differ upon many other points, both Fergusson and Huggins agree in recommending that we should fashion our future style upon the one which is now practised, not only here, but at the present day throughout Europe, whenever aught like artistic design is aimed at. A most futile and flimsy objection it surely is to say that as style is derived from Italy: it can be ill adapted to any other than an Italian climate, when actual experience of it ought to convince us that it is independent of climate. The same mode of building which serves to exclude heat, serves also to exclude cold. Some of the ultra Gothicists make it an ultra merit of their favourite style, that it allows the front of a house to be nearly all window, consequently one entire side of a room to be similarly privileged, thereby substituting the idea of chilliness, (I hope Typ. will not turn it into silliness) instead of snugness, in dismal weather.

As far as it goes, Fergusson's common-sense principle is excellent enough; but, unfortunately, it does not go quite far enough; for, in art at least, there is surely a wide difference between not going contrary to common sense, and not going an inch further, which is the essence of Quakerism. Huggins, on the contrary, I am glad to find, is much less strait-laced. Not only has he bravely vindicated Roman architecture as a system of construction, but has made evident that its short-comings in other respects have, instead of closing it, thrown the door wide open to us for further advance. Of late, it has been the practice with some to dwell too invidiously upon the defects of Roman architecture; not so much, it would seem, for the purpose of warning against them as of pointing to them as essentially inherent in and inseparable from the style itself. At any rate, Huggins does not unfurl the black flag, and exclaim in horrid and even infernal Dantesque voice, "*Voi chi entrate*," &c. Instead of preaching the doctrine of lackadaisical despair, he rather felicitates us of the present day, for that so much has been left to us to work out further for and by ourselves. Museums are crowded with architectural fragments, which, if only hints, ought, were they but properly made use of as studies, to inspire those who contemplate them with artist's eye, and enable them to infuse into their own productions or doings that sterling quality which is denominated originality. The reproach of mere copyism brought against modern classicism by those who would fain exterminate it altogether, is hardly to be denied. But now that the mistake has been detected, to correct it ought to be no very difficult matter. Surely we can go on in the same track without treading painfully in the very footprints of those who have gone before us—nay, even outstrip them. Tolerably certain it is, that what for distinction's sake goes by the name of "Italian," accommodates itself far more freely and readily to our actual nineteenth-century requirements than does any other style, as worthily witness the Anglo-Italian palazzi of Pall-mall. It would be easier for me to add much more, than it is to desist from doing so. I therefore conclude rather abruptly, by asking, Why is "Wightwick" silent? Why does not he come forward, as he is well able to do, as the champion of Modernism in opposition to Nineteenth-century Mediævalism?

ART-LOVER.

HOW TO PREVENT AN ECHO.

YOUR correspondent "E. C. O." (whose letter appears in your number for 7th November), fails to give as full particulars of his school-room as those whose advice he asks might perhaps like to have. But supposing the room, in addition to being as he describes it, to have its walls bare and flat, the height to wall-plate some 14 to 18 feet, and the ends of the room flat gable walls, circumstances almost implied in the description "country school-room," I am afraid the room presents unfavourable conditions for which the expedients suggested in his letter would be no cure.

Masking some of the reflecting surfaces, or, in other words, hanging a liberal quantity of heavy woollen curtains at one or both ends; and, if possible, partly along the sides; and laying carpeting or matting over the unoccupied parts of the floor, are measures likely to check the echo to some extent.

Probably a more effective remedy would be a horizontal ceiling, introduced at the top of the walls, if they are very lofty; or, if not, at any convenient part of the roof, so as to cut off at least its apex, if not the whole of the space.

It is, however, strongly to be urged, that these or any similar remedies, as they are only tentative and experimental, and by no means warranted "a perfect cure," had better be tried first in a temporary way. It is even possible that an inexpensive canvas or calico ceiling, or one formed of boards laid from collar to collar of the trusses (if they have collars) might permanently answer the end required.

May I, in conclusion, request, that if your correspondent meets with a really effectual remedy he will communicate the nature of it, coupled with a full description of the room, to your columns?

T. R. S.

IN reply to your querist, "E. C. O.," as to the means of curing an unpleasant echo in a school-room, I beg to observe, that I consider he states the cause of the echo in his letter, viz., that the roof rises at an angle of 45 degrees. By the known laws of reflection of light and sound (which are the same) this angle will reflect back to the body of the room. Had it been either a flat ceiling or a higher angle—say 51 degrees—there would have been no echo. Perhaps an internal lining of thick felt might cure it.

Salvador House. JAMES EDMESTON.

FOREIGN GOTHIC IN ENGLAND.

WILL you kindly allow the following to appear intact, in order to let the question be fairly argued. It is a question of *nationality* in Gothic and Renaissance. It is the question of the *Poetry of Nationality*. We are always talking about nationality in other things, but forget it in architecture.

At the present moment, the question amongst Gothic architects must be, how far they are justified in introducing foreign forms into this country? Gothic architecture grew up in each country individually; everywhere under totally distinct influences: in each land it was formed in accordance with the feelings, manners, habits, and climate of the same. In France, the difference between north and south is apparent to the most untrained eye. The architecture suited to the climate of the south of France is wholly out of place in England. The Cathedral of Sienna would not do in the place of Wells. Nothing can be more painful to look at, than the polychromatic architecture of the last few years: it is now all one dirty smear. What will the deep undercut French carving be in ten years? The action of London smoke will eat it clean away. On rational grounds, we must have English work for England. But on the other side of the question,—that which appeals to the feelings,—on the score of poetry of architecture;—the brilliant colour of the cathedral tower of Florence, the marvellous richness of the font of Sienna, are thoroughly in accordance with the spirit of Italian poetry, and with the character

of Italian scenery; things that cannot be translated into the cold, damp, but green England. The churches and buildings at Arles, St. Gilles, Nismes, were quite in the spirit of troubadour poetry, wholly separated as it was from the minstrelsy of the north. Even modern French and Italian poetry is untranslateable. What is more absurd than an English translation of Giusti or Beranger? Hence double is the absurdity of trying to introduce the works of earlier ages. I may say it shows a want of appreciation both of southern poetry and of English. If a man really appreciate his own home (all is in this word) he will not seek to introduce foreign forms; but rather, if he wish to revel in the *far niente*, he will live in Florence as long as it pleases him. The universalism of Gothic architecture consists in its suiting itself to every land. Modern architects seem to have different notions of this law, and "crib" from every land. It is contrary to all poetic feeling for home, for English scenery, to introduce foreign architecture. English to the backbone, down to county tradition, is the true feeling of an Englishman. Herein lies the poetry of home, the love of English scenery. The peculiar pensive melancholy of English scenery is destroyed by the introduction of foreign forms. As to the *Renaissance* of Classic work, it only expresses the epicurean filth of the "Hermaphrodite" of Beccatelli. True noble modern work should be like the Mediæval, without style, but suited to the wants and habits of its place; thoroughly practical, but should express the whole poetry of national English tradition as it has been handed down to us. What can be more lovely than the Sussex homesteads? Are they not all English? Is not the poetry of home expressed in them?

QUAM DILECTA.

CAMBRIDGE ARCHITECTURAL SOCIETY.

THE first meeting of the Society for the Michaelmas Term was held on Thursday, 29th October, in the Philosophical Society's Rooms; Mr. C. H. Cooper, F.S.A., in the chair. After the report of the committee for the past year had been read and approved, Mr. Fawcett, of Jesus College, gave an account of some of the churches he had seen in a short excursion through the Touraine, &c., in the summer. His account was illustrated with various sketches and photographs.

SIR,—Enclosed herewith I send you a copy of the report just presented to the Cambridge Architectural Society, as printed in the local newspaper of the 7th inst. Is it customary for the secretary of a society to laud himself and ignore all others but his own friends? or was the society founded for the especial glorification of the secretary? Surely many other architects must have been doing work in the county during the year, and deserving of notice. In fact, I know that Mr. G. E. Street, Mr. R. Rowe, and Mr. Digby Wyatt, have all been busy; and from the omission of their names and works I can only draw the conclusion that they are considered by the Cambridge Society as nobodies.

The architect's name appears to be carefully omitted in the paragraph attacking the new Lecture Rooms. Whatever may be the opinion of the secretary or of the committee, some, at least of Mr. Salvin's friends consider the statement as unfair and untrue, and aver that the building is coming out well. Nor did it appear necessary to the concoctor of the report to insert the name of Mr. T. Jeckyll, of Norwich, as having carried out the "extensive restoration"—he might have added, "creditably done."—at Feversham, although it may be presumed he was informed of it; whilst the same omission occurs as to the works at Pembroke College. Surely there are "several improvements effected." It would have been at least civil to have added the name of Mr. Cory, of Carlisle, even if he be not of the Society, and used "red rud" to the brickwork. No wonder the report laments the lack of increase of members! As one interested in that Architectural Society, I should have desired the proposed elementary lectures to have embraced Italian and the later styles, for the benefit of those who may "wish to acquaint themselves with the principles of architecture."

FAIRPLAY.

BAD LINSEED OIL.

IN the spring I painted a large dining-room four coats, the last being a flat: I used what is called American turps only, with the linseed oil, that it might harden properly. The appearance of the work, when finished, was all I could desire. I saw the room in question a few days since; it had been hung with pictures, every one of which had stuck: upon removing them the paint came off close to the plastering: thus the walls are spoiled. The general appearance is as though the turps had evaporated, leaving a gloss, or that fermentation had been going on during the hardening. These being the facts of the case, I wish to make a few remarks. If manufacturers will not supply genuine linseed oil and turps (for the turps is as bad as the oil), the painting trade will fall into disrepute. Gentlemen tell me they are in no way induced to have work done, either for beautifying or preservation, while such bad materials are supplied. In this town (Exeter), it is difficult, if not impossible, to obtain genuine white lead: this added to the former evils, good work becomes impossible.

Adulteration is not a thing of sudden growth: it has been going on for years. I have observed a general deterioration of painters' material: even our brushes are yearly becoming worse. Superadded to all this, is the increased price of everything, thus rendering the evils complained of doubly oppressive. Amid this general delinquency, is there not to be found one honest manufacturer in this island? It is only to make himself known, and honour and fortune await him. Native honesty failing, then I recommend leading firms in all large towns to convene public meetings on this question, and make arrangements to obtain supplies of genuine material from some part of the Continent, where I am sure men will be found ready to supply first quality goods for cash, and thus rid ourselves and the public of the present source of annoyance—dishonest manufacturers. NATHANIEL BERLEY.

CASES UNDER BUILDING ACT.

"PORTABLE BUILDINGS."

AT the Clerkenwell Police Court, Mr. Gashion, of No. 1, Lower-road, Islington, was summoned by Mr. Godwin, the district surveyor for South Islington, for having erected a wooden building in the back garden, roof covered with felt, and having door and windows. On a subsequent visit by the surveyor, defendant had placed four small wheels under it, and called it a portable house; and he told the magistrate that he made and sold such portable houses. There was no proof of this being the case, and no means of wheeling the building out of the yard. The magistrate considered it an evasion of the Act, fined defendant 20*s.* for neglecting to give notice, ordered him to amend within ten days, and to pay 21*s.* costs.

ARCHITECTS' ACTIONS.

Price v. *Rust*.—In the Lord Mayor's Court (before the Common Serjeant and Jury).—This was an action to recover 12*l.* 15*s.* for preparing certain plans, making estimates, and taking out quantities for builders' tenders. Mr. Philmore, in opening the case for plaintiff said, "My client is an architect and surveyor of Bedford-row, and defendant is a publican of Newgate-street. In the month of September last my client was introduced to defendant by a Mr. Matthews, who is a builder. Defendant stated that he required some alterations in his house (the Grapes), and plaintiff agreed to make a sketch. When it was finished, defendant expressed his approval, and plaintiff then made plans, which were sent in. The quantities were taken out, and finally plaintiff obtained tenders from various builders. At the eleventh hour, however, defendant drew in, and urged that he could not go on. He has refused to pay plaintiff a very reasonable demand, and I shall ask you, gentlemen, to protect professional men against the system which appears now to prevail in regard to architects and surveyors."

Mr. Price deposed to having done all the work charged for. It was suggested at first to advertise for tenders, but as the amount was only 150*l.* witness pointed out the expense. When plaintiff had obtained tenders, defendant wrote that "unforeseen circumstances prevented his going on." He refused to pay plaintiff's bill, and finally wanted to give only 5*l.*—Cross-examined. I did not agree to do the work for 5*l.*, nor was it understood that I was only to be paid in the event of the plans being approved of. Defendant actually sent my plans to the attorney for the owner of the house. Other evidence having been given,

Mr. Charles Smith, who represented defendant, urged that plaintiff was not entitled to recover because the plans were not approved. Plaintiff agreed to do all the work for 5*l.* Defendant said that the bargain was 5*l.* if the plans were approved, if not, nothing. The plans were not approved.—Cross-examined. "I wrote the letter about 'unforeseen circumstances.'"—His Lordship. "What were they?"—Defendant. "I had not the money to carry out the work. If I had possessed the money, I did not approve of the plan."—His Lordship. "Why, you just said that you had sent it to the attorney."—Defendant. "I was obliged to, in order that the owner of the house might be satisfied."—His Lordship having summed up, the jury almost immediately found a verdict for the plaintiff.

LIGHT AND AIR.

Cocks v. *Romaine*.—This case, before the Lords Justices of Appeal, was an appeal motion to dissolve an injunction granted by the Master of the Rolls, restraining the defendant from proceeding further with the rebuilding of certain premises which have been pulled down, situate 67, Chancery-lane, adjoining the house of the plaintiff, who carries on the business of a chemist and druggist. It appears that Mr. Cocks holds the premises, 68, Chancery-lane, on lease, from Mr. Nathaniel Powell, of Whitefriars Glass Works, City, for a term of twenty-one years from the 24th of June, 1860. Mr. Romaine has lately pulled down the house which stood next to Mr. Cocks's premises; and according to the present respondent (Mr. Cocks) was, until stayed by legal process, proceeding to erect other buildings on the ground, and in the course of such operations was seriously infringing on his rights. The matter involved points of notice to be given under the Building Act, and also in reference to a party-wall being erected which did not previously exist in the old building, and which, it was stated, with the other operations, would encroach on the respondent's premises. Mr. Cocks desired that the appellant should be restrained from building and raising any wall or walls or other buildings, nearer to the boundary line of his premises, or to a greater height in any part thereof, than the elevation at the same point of the old buildings as they lately stood, so as to darken, obscure, or impede the light and air previously enjoyed by him.

The Court decided that the injunction should be dissolved, without any prejudice to the question of costs; the defendant to undertake to pull down any building which the Court should consider ought to be pulled down; the defendant also to consent to any order which the Master of the Rolls might make to advance the cause; and the costs of the application to remain till the further hearing of the Master of the Rolls, and to be costs in the cause.

Miscellanea.

NOTTINGHAM ARCHITECTURAL ASSOCIATION.—On the 21st instant, the members of this association made their second excursion of the season. The localities chosen were Bottesford and Sedgebrook, both of which places proved to be of considerable interest, taken in an antiquarian point of view.

LIVERPOOL ARCHITECTURAL SOCIETY. — The meeting last week was presided over by Mr. W. H. Weightman. A discussion took place upon the nature and value of the material with which it is proposed by Mr. Ransome, of Ipswich, to coat St. George's Hall sculpture. The scale of architects' charges, proposed at the annual meeting of the Architectural Alliance, was then re-considered, and subsequently a paper on "Fresco Painting and its Substitutes" was read by Mr. Frank Howard.

NORTHERN ARCHITECTURAL ASSOCIATION.—The adjourned quarterly meeting of this association was held on Tuesday, the 10th inst., in the Old Castle, Newcastle-on-Tyne, Mr. T. Austin in the chair. The following gentlemen were elected officers for the ensuing year:—President, Mr. Dobson; vice-president, Mr. Pritchett; honorary treasurer, Mr. Dunn; honorary secretary, Mr. Oliver; honorary solicitor, Mr. G. W. Hodge; committee, Mr. Lamb, Mr. Green, Mr. Howison, Mr. Austin, and Mr. R. J. Johnson. On the motion of Mr. Dunn, seconded by Mr. Oliver, it was resolved "That this association having considered the scale of charges proposed by the Architectural Alliance, are of opinion that such scale of charges is satisfactory, but beg to suggest that the form, if possible, be condensed." On the motion of Mr. Peachey, seconded by Mr. Dunn, a special committee was appointed to consider the question of charges for valuations, and report at next meeting.

THE RUINS OF SWEETHEART ABBEY.—A meeting of the committee of the subscribers for repairing and preserving the ruins of Sweetheart Abbey, was held at Dumfries, on the 21st October. The sum of 337*l.* 15*s.* 7*d.* had been expended on the ruins. A report was read from Mr. James Foulds, who superintended the works, in which the various repairs and restorations effected were detailed. The work was executed by Mr. J. Robson, builder, Drumburn; and various suggestions made during the progress of the work by Mr. Witham, Kirkconnell, and Mr. Crombie, architect, Dumfries, were adopted.

THE HOTEL MOVEMENT.—A Guernsey hotel company, with a capital of 50,000*l.*, is being formed on joint-stock principles in London. The promoter, Mr. W. Southwood, of London, C.E., has contracted for the purchase of Castle Carey, the present residence of the Lieutenant Governor of the island, in order to form the nucleus of the hotel, which is to be completed by large additions to the present building. A bathing place for ladies is to be a feature in the project. Mr. Garling, architect, is to design the necessary works.

THE DRINKING FOUNTAIN MOVEMENT.—At Watford, a drinking fountain has just been inaugurated. The local Board of Health have placed it on the site, opposite the Corn Exchange, where the old town-pump stood. The fountain is of polished granite with a stone base, and is reached by a flight of stone steps. It is surmounted by a bronze cupola, from which the water flows in a horizontal direction. On the granite is engraved the simple inscription, in gilt letters, "Erected by Subscription, 1863."

THE GINGELL MEMORIAL CLOCK, EAST-HAM.—The new church at East-Ham, Essex, from the designs of Mr. Blomfield, architect, and consecrated a short time since, has just had a clock presented and fixed in the tower, from a sum of money left for that purpose by the late Mr. Gingell, Jun., salesman, Whitechapel. The clock bears the designation of the "Gingell Memorial Clock," with an appropriate tablet to the memory of the donor. Mr. Joseph Fairn, turret-clock maker to her Majesty, made the clock to order, from the same design as a clock with four dials, for Scone Palace, the seat of the Earl of Mansfield.

AN ENORMOUS PAIR OF SHEARS.—Messrs. Tangye, Brothers, and Price, of the Cromwell Works, Parade, Birmingham, have just completed, for the Russian Government, an immense pair of shears, weighing 24 tons, having a power of pressure equal to 1,000 tons, and able to snip to pieces a cold bar of iron half a foot square. The contrivance is technically described as a "horizontal hydraulic shearing machine, with open mouth;" and it is said to be, if not the largest, at least the most powerful article of the kind ever made.

Baptist Chapel, Rhyl: Gold Watch to the Architect.—Early this year the opening of this little chapel took place. The committee have just presented the architect, Mr. F. D. Johnson, of Birmingham, with a gold watch as a testimonial of their approval of his designs of the edifice.

Another Conflagration at Aldershoit.—No less than seventy-six horses out of eighty-eight have been destroyed in a stable near the barrack department, and belonging to the military train. The fire originated with one of the lamps hung up in the stable. It broke out about half-past five in the morning, and in fifteen minutes the whole was in a blaze. The stable, like the rest of the camp buildings, was of course a wooden one. The estimated amount of damage is between 4,000*l.* and 5,000*l.* How much would have been saved at Aldershott if our warning at first had been attended to!

Memorial to Rev. Dr. Duff.—The Calcutta correspondent of the *Times*, in his letter of the 23rd ult., communicates the following intelligence:—"A movement is now being set afoot all over India to raise a memorial to Dr. Duff, the great missionary; who, after a career of a third of a century, has been ordered to Scotland by the doctors. Sir C. Trevelyan, his coadjutor thirty years ago in the work of Hindoo enlightenment, and the Bishop of Calcutta, are at its head. It is proposed to build a memorial hall bearing his name, in the *place* of educational buildings about to be erected by Government in Calcutta. The hall is to be a reproduction, in marble from Carrara, of the Maison Carrée of Nimes, and will be devoted to meetings of a Christian and cognate character. The Bengalese have held an enthusiastic meeting, under the presidency of the native judge, the Hon. Semlonath Pundit. A sum of 15,000*l.* will meet the expense.

Communication between Railway Passengers and Guards.—This ever-recurring question is referred to by a correspondent, "J. E.," who suggests the simple expedient of loud bells outside the carriages, with bellpulls within; but one great obstacle to this and many other modes of communication already and often suggested being adopted by railway directors is the perpetual risk of idle and mischievous persons or children stopping trains in transit unnecessarily, and thus not only wasting the time both of passengers and officials, but incurring the peril of real dangers from delay, &c. We are persuaded, as we have long been, that the *only* remedy for the admitted evils and dangers arising from want of communication between guards and passengers (between passengers and drivers is quite out of the question), would be to give the guards power to pass along the train, either through the carriages, as in America, or outside. There are difficulties here also, but they are mere money obstacles, and do not affect the propriety or safety of the proposal. As it is, to call the man perched and imprisoned in a cage by the re-assuring name of a guard is absurd and ridiculous. Our correspondent also ventilates another old proposal, to have railway carriages lightly but strongly made of wrought iron instead of splintery wood.

Cheap Railways in the North of Scotland.—Sir J. D. Elphinstone sends to the *Times* an account of the great length of railways made in the north of Scotland at a cheap rate. He says:—"For the last fifteen years I have been engaged in carrying out a system of railways to supply the wants of the counties of Aberdeen and Banff, which is now almost completed. The whole will extend, in main line and branches, to above 190 miles, of which 180 miles are open and in full operation, completely exhausting the wants of these counties." Among them is "the main line from Aberdeen to Keith, forming part of the through line from that city to Inverness, 53½ miles: it is double for seven miles; from there, land taken and over bridges constructed for a double line, two long viaducts over the rivers Don and Deveron, heavy rock cuttings, expensive town property in the vicinity of Aberdeen, and 85,000*l.* preliminary (Parliamentary) expenses, cost 14,000*l.* per mile." There is also the "Strathspey Railway, 32½ miles,—two expensive crossings of the River Spey, one of the largest, and certainly the wildest, river in Scotland; two of the Fiddoch, also a very unruly stream; a short tunnel, heavy rock cuttings, and other works,—7,500*l.* per mile. This railway, considering the works, is probably the cheapest line that has ever been executed." The other lines range from 6,500*l.* to 9,000*l.* a mile. "The majority of the works on these lines [it is added] are of granite, most solid and substantial."

Paris Schools of Design.—The Science and Art Department has directed Mr. Raimbach, master of the Birmingham School of Art, to visit and report upon the works of the students of French Schools of Design, now exhibiting in one of the galleries of the Palais de l'Industrie, in the Champs Elysées, in connexion with the Exposition of Art applied to manufactures.

Railway Returns.—The traffic receipts of railways in the United Kingdom amounted for the week ending the 31st of October, on 11,028 miles, to 586,880*l.*, and for the corresponding week of last year on 10,578 miles, to 564,200*l.*, showing an increase of 450 miles and of 22,680*l.* in the receipts. The total receipts of the week show a decrease of 12,704*l.*, as compared with those of the preceding week.

Bow Bells.—These bells were rung for the first time on the birthday of George III., June 4, 1762. The following account of their weight is given in the *Gentleman's Magazine* of that year:—

	cwt.	qrs.	lb.
1st bell	8	3	7
2nd ,,	9	0	2
3rd ,,	10	1	4
4th ,,	12	0	7
5th ,,	13	0	24
6th ,,	17	0	11
7th ,,	20	2	26
8th ,,	24	2	5
9th ,,	34	2	6
10th ,,	53	2	22

The total weight is about 20 tons, 14 cwt. 4lb.,—a heavy amount of metal to be put in motion at the great height at which the bells are placed in the tower of the church.

Sales.—At the Mart, by Messrs. Tebb, Brothers: Freehold ground-rent of 1*l.* 10*s.* per annum, secured on No. 5, Prince's-street, Tottenham, 25*l.*; freehold ground-rent of 5*l.* per annum, secured on Nos. 19 and 20, Queen-street, Tottenham, 95*l.*; freehold ground-rent of 18*l.* 18*s.* per annum, secured on Nos. 9 to 12, The Terrace, White Hart-lane, Tottenham, 535*l.*; freehold ground-rent of 66*l.* per annum, secured on the Compasses public-house, Queen-street, also two houses, Nos. 1 and 2, Queen-street, and two houses in Prospect-place, White Hart-lane, 900*l.*; freehold ground-rent of 4*l.* 10*s.* per annum, secured on a beer-shop situate at the corner of Prospect-place, 115*l.*; freehold ground-rent of 5*l.* 5*s.* per annum, secured on Nos. 3, 4, and 5, Queen-street, 145*l.*; freehold ground-rent of 21*l.* per annum, secured on Nos. 8 to 13, Queen-street, 380*l.*; freehold ground-rent of 6*l.* per annum, secured on Nos. 14 and 15, Queen-street, 135*l.*—By Mr. Marsh: Leasehold, the ground lease of a mansion, being No. 5, Upper Belgrave-street, held for an unexpired term of 60½ years from Christmas, 1863, at a ground-rent of 15*l.* per annum, and subject, in addition, to a charge of 190*l.* per annum until Christmas, 1883, let at 400*l.* per annum, 3,820*l.*

Apparatus for Extinguishing Fires, &c.—New patents are now turning up which confuse the mind with ideas of old inventions. We had thought the plan of fitting up water-pipes in buildings, with the view of extinguishing fires in them, was not new; but perhaps the right plan of doing so has only now been hit upon. Letters patent have been granted to Mr. Henry Burridge, builder, for the invention of "improvements in apparatus for extinguishing fires, applicable also for ventilating and fumigating, and for supplying, delivering, and distributing fluids." The provisional specification says, "My apparatus consists in the employment of a service-pipe or pipes, connected to and communicating with one or more perforated pipes, tubes, troughs, jets, gratings, or plates arranged in the form of a framework or otherwise; the said service-pipe or pipes being also connected to and communicating with a hose or hoses, which may be attached as desired to a supply of water. In applying my apparatus to houses and other land structures, the service-pipe, combined with taps, plugs, or other controlling agents, may be conducted up the inside or outside walls (or both), or between the walls and through the walls into the rooms or interior; or it may be conducted through the decks in ships or other vessels; and connected to the perforated pipes, troughs, gratings, or other perforated appliances, which being in the interior of the rooms or other parts of the structure, at the ceiling, wall, or elsewhere, water, steam, or other agent may be at once projected in case of fire from the ceiling, walls, or other convenient parts on to the flames in the interior. . . . . The apparatus may be applied for ventilating, fumigating, and supplying, delivering, or distributing fluids."

Proposed New Town near the Banks of the Thames.—We understand that the plans and specifications for the erection of about 110 villas, on the "Flowers Farm" Estate, at Pangbourne, on leases of 999 years, are now completed, and are exhibited at many of the stations on the Great Western Railway. This freehold property belongs to Mrs. Breedon, of Ryde, Isle of Wight, Mr. W. Radcliffe the solicitor, and Mr. Newman the architect, both of Ryde, are engaged in the undertaking.

Ancient Pyramid in California.—Another of those numerous evidences of a civilized antiquity in the "New World," has just turned up, it seems, in the shape of a great stone pyramid, composed of courses from 18 inches to nearly 3 feet in thickness, and 5 to 8 feet in length. It has a level top of more than 50 feet square, though it is said to be evident from the remains that it was once completed. This pyramid differs, in some respects, from the Egyptian pyramids, being more slender or pointed, and the outer surface of the blocks being cut to an angle, that gave the structure, when new and complete, a smooth or regular surface from top to bottom.

Proposed Tunnel under the Mersey.—A plan has been suggested by Mr. T. J. Edwards, Tranmere, to make a tunnel under the river. It would commence, according to the *Albion*, on the Cheshire side in the low land at the corner of Camden and Conway streets, which is only about 26 feet above the level of the Old Dock sill, proceeding thence to the north of the Woodside Landing-stage under the river, and emerging on the Liverpool side at the corner of Whitechapel and Preston-street. The length of the tunnel would be 3,400 yards, with descending gradients from the termini to the centre of the tunnel under the river of one in forty. It is also part of the plan to construct a branch tunnel for connecting the goods line with the London and North-western railway, passing under Byrom-street at one end, and a connexion with the Birkenhead Railway for the goods traffic and a through passenger traffic from Whitechapel to Chester at the other end. Mr. Edwards estimates that the works may be executed for 400,000*l.*

Sanitary Effects of good Drainage and Water.—It appears that for the quarter just ended the rate of mortality in Salisbury has been extraordinarily low, the deaths out of a population of over 9,000 having been only 20, while the average number of deaths in the corresponding quarter for many years previous to the introduction of a proper system of drainage and waterworks was 50; and since these works, for the last eight years, the average has been 37. The average annual number of deaths for the eight years preceding the completion of the drainage (excluding the cholera year) was 243, or 27 in 1,000, and for the same period since, 193, or 21 in 1,000, an actual reduction of almost one-fourth of the whole number. With just 50 deaths per annum less than usual during the last eight years, Salisbury is now looked upon as one of the very healthiest cities in the kingdom. If an equally low rate of mortality had prevailed in London during the last quarter, only about 450 persons would have died each week, instead of the numbers actually recorded,—about 1,250.

The "Boke of St. Alban's."—In *Notes and Queries* are some curious particulars of the more modern history of this very ancient book. About fifty years since it belonged to the library of the Hickmans, of Thonock Hall, Gainsborough, and was cast aside, with other "rubbish," because it had not a handsome binding, and, indeed, was without boards at all. A gardener named Naylor, who dabbled in books, got leave to appropriate some of the rubbish, and the Boke of St. Alban's, which was amongst it, long lay on a kitchen shelf, till the housewife got tired of perpetually dusting it, and the book was sold for 9*d.*, being 9 lb. weight, at a penny per lb. It afterwards got into hands a little less unappreciative of its great rarity and value, and sold for 3*s.* Again it changed hands for two guineas; and again, for seven guineas, to a knowing bookseller named Stark, who was doubtless considered a fool for doing so, but who took it to London, and sold it to the Right Hon. T. Grenville for between seventy and eighty guineas. It is now in Showcase VIII., in the King's Library of the British Museum, and bears the following label:—"The book of St. Alban's. The bokys of Haukying and Huntyng, and also of Coot armuris. Written by Dame Juliana Barnes, or Berners, Prioress of Sopwell Nunnery. Printed at St. Alban's in 1486. Bequeathed by the Rt. Hon. Thomas Grenville."

THE LORD MAYOR'S WORKMEN.—We are glad to be able to mention that the Lord Mayor, on the 9th instant, gave a holiday to all his workmen, and in the evening provided for them an excellent dinner at the Whittington Club.

THE MERSEY DOCK BOARD. — LOAN OF 875,000*l.*—After a long and animated discussion at their meeting on Thursday, the Board decided to adopt the recommendations presented by a special committee appointed to consider the new plans for dock works, and to apply to Parliament in the next session for power to borrow a sum of 850,000*l.*, to be applied in the making of the purchases, and in the construction of the new dock works on the Liverpool side of the river, included in the plans agreed to by the committee. It was afterwards resolved to increase the amount to 875,000*l.*, in order to include the purchase of some additional lands.

TELEGRAPHIC. — An important operation in connexion with the telegraphic system in Ireland —one by which it is alleged the American news will be received in the metropolis six hours earlier than at present—has just been completed. This is the laying of the wire completing direct communication between Cape Clear and London.—— The American Minister, Clay, writes from St. Petersburg to Washington, "They have granted me a telegraph-line charter, the line to run from the mouth of the Amoor River to America. It will unite all the continents, and be the great work of the age. It will illustrate my mission to this country."

THETFORD STEEPLES.—One dark night not many years ago the steeple of St. Cuthbert's Church, Thetford, quietly fell down, so that no one knew of its downfall till daylight revealed the state of matters on the following morning. The church was speedily restored. A like fate seems now to threaten the older and greater steeple of St. Peter's Church. A portion of its masonry has suddenly given way and fallen to the ground. It was found that both the buttresses forming the north and south angles of the western side had some rather threatening flaws, and a meeting of the churchwardens was held, and they ordered the necessary repairs to be immediately done. Strong iron bolts will therefore be inserted through the steeple.

THE EMPTY HOTELS AT THE NEW SMITHFIELD CATTLE-MARKET.—For the most part these huge and expensive buildings seem to have been a losing speculation. For years they have been unoccupied. Outside the limits of the market there are certain houses which have been made for taverns, that are also of considerable proportions, but which have had but a limited amount of trade. These we believe have been matters of private speculation. One of them has been altered in its interior arrangements, and let in rooms for the families of working people. The whole of the apartments were readily taken, and many more of the same kind were in request. We have before suggested that the market taverns belonging to the corporation should be adapted to a similar purpose. Better make these places into wholesome dwellings for a large number, at a considerable profit, than to leave them standing idle.

GAS.—The Rotherham Gas Company have declared a dividend after the rate of 10 per cent. on A stock, 8 per cent. on B stock and on D shares (so far as the latter are paid up), for the past half-year; and that half a year's arrear of dividend, at the rate of 2 per cent. (unpaid in former years), on A stock be also paid free from income-tax. — The Brecon Gas Company have resolved to reduce the price of their gas from 6s. to 5s. per 1,000 feet.—The extensive alterations and additions that have been going on for some time at the Reading Gas Works are nearly completed. About 10,000*l.* have been expended. At King's-road, the works have been almost entirely remodelled, and the most modern improvements have been introduced. A new retort-house has been erected, capable of producing something like half a million cubic feet of gas per diem. An immense chimney has been raised, and condensers upon a new principle have been added. The retort-house is covered with an iron roof, the work being executed by Mr. Williams, and the retorts have been set by Mr. Lloyd, of Wandsworth. Various other improvements have been effected. The plans and specifications for the various works were prepared by Mr. R. P. Spice, of London, gas engineer; and were carried out under the superintendence of Mr. Strachan, the general manager.

SMITHFIELD.—Preparations are being made for the commencement of the works for the construction of the Dead Meat and Poultry Market, Smithfield, London. The houses and buildings extending from the corner of Smithfield-bars to West-street, including the Ram Inn and several houses in Smithfield-bars are being hoarded in. The materials will be sold, and the houses razed to the ground. The remains of the sheep and pig pens will also be removed, and the site cleared for the above purpose.

RATING.—A Scotch case in the House of Lords, which has been only recently reported in the law journals, adds another authority to the many that have accumulated on the application of the principle of rating to the peculiar cases of waterworks, gasworks, railways, and such like, where the value in each parish is difficult to be ascertained, because it is difficult to determine at what part of the entire works the profits arise. In this case a Waterworks Company was empowered to make reservoirs and let sites for mills on the banks of the waterfalls, at rents to be paid by the mill-owners in respect of the water power of which they had the use. These rents were held to be rightly included as part of the annual rateable value of the waterworks. This was the case of Shaw's Waterworks Company *v.* Greenock Police Trustees.

ACCIDENTS. — At the Staffordshire County Lunatic Asylum, now in course of erection at Burntwood, two men, with a labourer who assisted them, were removing the centres from a cellar arch, when they also removed the centres from an adjoining arch, which was not necessary; and thus they caused the first to fall. The arch buried two of them, but they were soon extricated. One had his thigh and one of his ribs broken: the other was somewhat bruised; whilst the third escaped unhurt. The arch which fell has been replaced.——A carriage shed has been blown down at the Brighton Station. The shed was made a complete wreck. At the time it was damaged it contained about ten or twelve carriages.——One of the chimney stalks of the Midton Bleachworks, Lochwinnoch, a structure 200 feet high, says a Glasgow paper, and not long erected, was thrown down lately by the fury of the wind. Fortunately it fell clear of the works, and did not hurt any one.

LIVERPOOL SCHOOL OF ART.—The annual presentation of prizes awarded by Government has been made. The meeting was held in the sculpture gallery at the Liverpool Institute, in Mount-street. The attendance was very numerous. Mr. C. S. Samuell, the chairman of the art committee, took the chair. The chairman, in opening the proceedings, said that, taking eighteen of the largest schools in the country, the average number of national medallions that had been taken was two, whereas their school had taken three such medallions—a largely increased per centage—besides considerably above the average number of local medals. He concluded by reading a letter from Mr. Ruskin, who had been invited to preside, but was at present in Zurich. Professor Elliot was invited to say a few words on the connexion of science and art. He always considered that the two ought to be inseparably united. In his own department, viz., mathematics, he could see great evil arising from their separation. Arithmetical instruction suffered much from the absence of theory; geometrical from the absence of practice. Schools of art were necessarily confined to the practical, colleges to the theoretical, but an ordinary school education ought to blend the two together. He then spoke of the pre-Raffaellite school of painting, and the disputes to which it had given rise, while no one could tell us precisely what the word meant. He thought science might throw some light upon that, and afford a criterion by which to judge of the comparative merits of that and the common system. It was in vain, he said, to adduce in its favour the views taken by photography. The peculiar character of these depended wholly on the kind of lens employed. With a full-sized lens the effect is precisely that of the post-Raffaellite school: when a stop is placed over the lens, with a narrow opening, the scene is changed at once into pre-Raffaellite. An eye with a very small pupil, on looking through a small hole in a card, will see a pre-Raffaellite view.

TENDERS.

For building house on the Drake estate, New Cross. Mr. John Jenkins, architect:—

Laws	£948 10 0

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Cotton, which while they have neither the STRENGTH nor DURABILITY of FLAX, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

PATENT ASPHALTE CALDRON, for laying asphalte floors. Three times highly recommended by the Royal Agricultural Society. The cheapest and best kind of floor, impervious to wet, and vermin will not touch it. Full particulars sent free by

Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 25 to about 10 per cent of the total make, which in itself represents a large pecuniary saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank street, Westminster.

BRICKS.

SECRETARY.
Edward Perris, esq.
Offices: 33, New Broad-street, E.C.

ABRIDGED PROSPECTUS.

The object of this company is to manufacture alkali, bleaching powder, caustic and crystals soda, vitriol, and other chemicals, in which an extensive business can be done and large profits realised from the application of the most improved machinery and apparatus with adequate capital.

The Directors have secured, upon advantageous terms, a lease for ninety-nine years of premises eligibly situated near Queensferry, Flintshire, bounded on one side by the Chester and Holyhead Railway (from which a siding has been arranged for at a small expense), on another side by a road, and on another by the River Dee, navigable for vessels of 200 tons burthen. Nearly all the raw materials are obtainable on the spot on favourable terms, and the freight of the manufactured goods to Liverpool only 2s. 6d. per ton. There is sufficient land to allow of any extension of the works which may be desirable, and to afford space for storing the refuse produced in the manufacture. Many existing alkali works are put to great expense in consequence of not having sufficient space for these purposes.

The Directors have secured a thoroughly practical manager, who has been engaged for many years in the business, and who will bring a large and valuable connexion to the company. The Directors purpose developing the local culture of cruciferæ, so far as practicable, this being the most profitable crop for the land, as it is intended to commence with the manufacture of about 200 tons a week of finished goods, upon which an average profit of at least 25 per ton will be realised, after making full allowance for management, working expenses, and repairs, as will be seen by the statement of cost, to be obtained at the company's offices. This will yield over 30 per cent profit per annum, which is sufficient to pay dividends of 20 per cent on the entire capital of the company.

The Directors can, through the connexion introduced by their Manager, readily sell this quantity for cash; and as the demand for alkali has within the last seven years increased from 40,000 tons to over 400,000 tons per week, and is still increasing, it is evident that there is ample room for the extension of the Company's business.

The Directors have effected contracts on favourable terms for the greater portion of the plant necessary for their works; and as most of the plant is now in an advanced state, they expect to commence manufacturing without much delay.

The Directors refer to the large fortune realized in this business by those engaged in it, as a guarantee for the success of this Company, and call attention to the peculiarly favourable circumstances—compared with most of the existing works—under which this Company commences business.

Through the operation of a Bill passed last Session many of the existing alkali works will be put to great expense in remodelling their works and apparatus, while this Company will commence under very favourable circumstances, as its works and apparatus will conform to the Act, and be on the most modern and improved system.

The Articles of Association are open for inspection at the Offices of the Company, where prospectuses, statements of cost, and forms of application for shares can be had on application either personally or by letter.

If no allotment of these shares be made, the deposit will be returned in full.

POLONCEAU and SEYSSEL ASPHALTE.

ESTABLISHED  1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN FILKINGTON, 15, Fish street-hill, London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

JAMES STIFF & SONS,

MANUFACTURERS OF GLAZED STONEWARE DRAIN-PIPES, WATER-CLOSET PANS, SINK-TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE PURPOSES; ALSO

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

PATENT INDURATING SOLUTIONS,

For the Preservation of Stone, Cement, &c.;

PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, &c.

FIRE-PROOF VARNISH,

For Internal Wood Work, Roofs, and Church Work generally. This Varnish renders Wood Uninflammable, and Preserves it from Decay.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

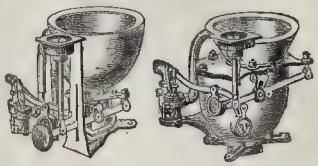
PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied as readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

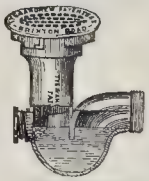
CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.



EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.



J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No cistern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

TYE & ANDREWS' NEW PATENT SINK TRAP is universally admitted to be the only perfect Trap for Sinks in Domestic Dwellings, as fixed at the principal Institutions. Among others, Wellington Barracks, Royal College of Surgeons, &c. &c. Prospectuses on application to the Patentees, TYE & ANDREW, Brixton-road.

SUPPLIED BY ALL LEAD MERCHANTS AND IRONMONGERS.

STEPHENS'S STAINS for WOOD. A SUBSTITUTE for PAINT, and at HALF the COST.

Mr. STEPHENS has been kindly permitted to make public the following extract from a letter addressed to him by the Rev. R. H. CHICHESTER, of Chittlehampton, near South Molton:—

"The effect produced by the Staining Fluid and Varnish has given such entire satisfaction, that the parishioners have requested me to procure five times the quantity now paid for, in order to finish the church."

H. STEPHENS, Chemist, 16, St. Martin's-le-Grand, E.C. late of 54, Stamford-street, S.

Agent for Hamilton's celebrated Painting and Graining Brushes.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving the following letter FROM SIR RAYMOND JARVIS, Bart, VENTNOR, ISLE of WIGHT.—Second Testimonial:—"March 10th, 1856. In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed it is likely to be adopted generally in the houses that are being erected here."

N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

VAUXHALL GARDENS ESTATE.—Several very valuable SITES on the above Freehold Estate TO BE LET, for building purposes.—Apply to Messrs. DRIVER, Surveyors, Land Agents, and Auctioneers, 4, Whitehall, S.W.

THE CLIFF POTTERIES, Kent.—TO BE LET, or the LEASE to be SOLD, of the above POTTERIES, which are situate about three miles from the Higham Station, eight miles from Gravesend, and five miles from Strood; also near the river, with a capital wharfage frontage. The property comprises extensive business premises, with ground, first and second stories, and are fitted with six large kilns, one 10-horse steam engine and boiler, two pairs of runners, two pug-mills, with shafting, &c.—For terms, &c. apply to Mr. MURRELL, Surveyor and Auctioneer, 1, Walbrook, Mansion House.

FARNBOROUGH and ALDERSHOTT FREEHOLD and GROUND-RENT SOCIETY (Limited).—To BUILDERS and OTHERS.—Land on this Society's Estate at Farnborough, TO BE LET on building leases, or TO BE SOLD, upon advantageous terms.—Particulars may be had of the Architect, Mr. H. CURREY, 4, Lancaster-place, Strand, W.C.; or at the Offices of the Society, 18, New Bridge street, Blackfriars.
EDWARD CHATFIELD, Managing Director.

KEYNSHAM BLUE LIAS LIME and CEMENT WORKS, SOMERSET.—TO BE SOLD by PRIVATE CONTRACT, by order of the Liquidator, the newly-formed FREEHOLD WORKS, occupying a site of 7a. 3r. 39p. or thereabouts. The existing kilns and ovens are capable of producing 700 to 800 tons of lime and 120 tons of cement weekly, both products being approved of by large contractors and engineers at Bristol, the cement being used in many of the Government fortifications now in progress. The buildings are very substantial and the machinery is of the best description, driven principally by water power, but with steam power as auxiliary. Coals are supplied to the works at a very low price, and the Great Western Railway Station is within a short distance.—For further particulars apply to Messrs. N. LINDO & SONS, Solicitors, 47A, Moorgate-street; of F. MAYNARD, Esq. Liquidator, 19, Bread street, Cheapside; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London.

FREEHOLD MILLS, with good water power, Keynsham, Somerset, well adapted for corn mills, oil mills, or paper mills, TO BE SOLD.—Apply to Messrs. FULLER & HORSEY, Billiter-street, London, E.C.

TO BE LET, by the Fishmongers' Company of London, on a Building Lease for Eighty Years, valuable BUILDING LAND, Newington, Surrey, within three minutes' walk of the Elephant and Castle. The site is in lots, the whole of an Acre of Ground, situate on the east side of the Walworth-road, having a frontage of 106 feet in Crown-row, and a frontage of 196 feet 6 inches to Prospect-row, with Eighteen Workshops in the rear of William's place. This property is well adapted for shops and business purposes, requiring space and ready access to the principal thoroughfares of the metropolis. TO BE LET by TENDER, in one or more lots, to suit the views of different parties wanting the ground.—Apply to Mr. W. B. TOWSE, the Company's Clerk, Fishmongers' Hall, London Bridge; or to Mr. RICHARD SUTER, the Company's Surveyor, 28, Fetchurch-street, E.C. where plans and particulars may be seen. The Tenders are to be sent in by TUESDAY, NOVEMBER 24th next, at NOON precisely.
Fishmongers' Hall, October 20, 1863.

WATFORD, HERTS.—TO BE LET, on BUILDING LEASES, several PLOTS of FREEHOLD LAND, in the neighbourhood of the above town, in close proximity to the Station, and on the new road recently made. For plans and particulars apply to Mr EDWARD H. BURNELL, Surveyor, 32, Bedford-row, London, W.C.

EXTENSIVE MANUFACTURING PREMISES, with STEAM POWER.—TO BE LET, one of the finest BUSINESS PREMISES in the City; containing large yard, with ongoing wharf, pipe-clay, and Engine Workshops, fitted up with circular saws, mortise and tenoning machines for making doors, &c.; three vertical saw frames for cutting deal planks, &c. 26 inches deep; two powerful steam engines, with hot water tank; a well of good water, self acting benches, together with every convenience for a large trade: public and private offices, fitted with fire-proof safes, &c. For further particulars apply at the City Timber Yard, 20, Long lane, City.

MID-KENT LINE.—Eligible Freehold BUILDING LAND TO BE LET, on LEASE for 60 years, direct from freeholders. It is well situated on the side of a hill, commanding beautiful scenery, about ten minutes' walk from the Gatford Bridge Station, Mid-Kent Railway. Railway journey, 30 minutes. Land may be seen, and particulars obtained, by applying on the spot to FREDERICK SELBY, Ravensbourne Park, Lewisham, S.E.

SYDENHAM HILL.—LAND TO BE LET for BUILDING: 430 feet frontage, average 560 feet deep. Beautiful site, with extensive prospects, and fronting a high road; close to three railway-stations, and within ten minutes' walk of the Crystal Palace. May be had in one, two, or three plots, for detached residences.—For particulars, apply personally to Mr HENRY DAWSON, Architect, 16, Finsbury-place South, E.C.

KENTISH TOWN.—TO BE SOLD, FOUR CARCASES, in Mansfield-road, Oak Village, Kentish Town. Term upwards of eighty years. Ground rent, 6l per Lease and Particulars may be had of Messrs. SAUNDERS, Surveyors, 8, Furnival's-inn, Holborn; or Mr. FURNELL, Builder, on the Premises.

TO OWNERS of HOUSE PROPERTY, BUILDERS, &c.—WANTED to PURCHASE, a SEVEN or EIGHT-ROOMED HOUSE, well built, and in a good situation, and for which the owner would be willing to take (from a cabinet-maker and upholsterer of many years' standing) first-class furniture in lieu of cash.—Send particulars to B. care of Mr. Gushlow, Decorative Artist, 34, Newman-street, Oxford-street.

TO CEMENT MANUFACTURERS and OTHERS.—TO BE LET, the Premises known as the ELMLY CEMENT WORKS, situated on the River Swale, Sittingbourne, Kent, lately in the occupation of Messrs. Francis & Co. as Cement Manufactory. They consist of sixteen acres of ground, on which are large and numerous kilns and other buildings and appliances requisite for the Manufacture of the finest Cement; also Eighteen Labourers' Cottages, &c. There is excellent dock accommodation, and water carriage to London direct. The premises are also adapted for many other purposes.—For terms and particulars apply to Messrs. R. & C. H. HODGSON, Solicitors, 19, Salisbury-street, Strand.

BRICKEARTH, at Southall, near the Grand Junction Canal, and the Great Western Railway. TO BE LET, from Twenty to Thirty Acres of excellent BRICKEARTH of good depth.—For plans and particulars apply to Mr. RICHARD TRUMPER, 23, Lincoln's-inn-fields, W.C.

TO BE SOLD OR LET, ON BUILDING LEASE, WATERSIDE PREMISES, FREEHOLD, West of London Bridge, about one quarter of an acre.—For particulars apply to T. K. GREEN, 23, College hill, Cannon-street.

HOUSE WANTED, to HIRE, with immediate possession, for two or three years, within about a mile and a half of Holborn, with accommodation for from 20,000 to 25,000 vols and of sufficient strength to bear same.—Apply, stating terms and full particulars, to THOS. CHATFIELD CLARKE, Architect and Surveyor, 137, Leadenhall-street.

SITE REQUIRED for the ERECTION of a LARGE PUBLIC BUILDING. Must be in a good position, either E.C or W.C.—Particulars to be addressed to J. G. KNIGHT, Esq. Architect, 27A, Bucklersbury, E.C.

BUILDING GROUND TO LET.—GREAT TOWER STREET, in the City of London.—The Commissioners of Sewers of the City of London will meet in Guildhall of the said City, on TUESDAY, the 9th day of FEBRUARY next, at HALF-PAST TWELVE o'clock precisely, to receive proposals for taking on BUILDING LEASES for a term of eighty years (the first year at a peppercorn rent), certain PLOTS of FREEHOLD LAND, situate in Great Tower street, in the City of London, on the east of the Corn and Colonial Markets. Further particulars, with conditions and printed forms of proposal, may be had on application at this Office, where plans of the ground may also be seen. The Commissioners do not bind themselves to accept any proposal unless deemed advantageous. Persons making proposals must attend personally, or by a duly authorized agent, on the above-mentioned day, at HALF-PAST TWELVE o'clock precisely, and the parties whose offers are accepted will be required to execute an agreement and a bond at the same time.
JOSEPH DAW, Principal Clerk.
Sewers Office, Guildhall, November 6, 1863.

A FREEHOLD SITE of GROUND WANTED, to PURCHASE, suitable for a Literary Institution for a strongly built House capable of adaptation, having an area of about 5,000 feet, either in the City, or within a mile and a half beyond the boundaries. Early possession required. Old buildings would not be objected to. Address, stating full terms and particulars, to THOS. CHATFIELD CLARKE, Architect and Surveyor, 137, Leadenhall-street.

BUILDING LAND at STAINES.—Mr. PHILIP D. TUCKETT is instructed TO LET, on building leases, in lots, suitable for the erection of small villa residences, about EIGHT ACRES of very eligible FREEHOLD BUILDING LAND, close to the Staines Station, on the South-Western Railway, and only thirty-eight minutes from London. The soil is a gravel, and there is an excellent supply of good water at a moderate depth. The great demand for moderate-sized houses in this locality has led to a good deal of land being taken for building during the last year or two, and as the above is nearer to the station, and in every way better situated than any other available site, it can be confidently recommended to speculators.—For particulars apply to Mr PHILIP D. TUCKETT, Land Agent, Surveyor, and Auctioneer, 76, Old Broad-street, E.C.

TO BE LET, THREE large, light, and dry WORKSHOPS, and a GROUND-FLOOR, suitable for manufacturing or warehousing goods.—Apply to Y. 40, Marshall street, Golden square, W.

NORTH STREET, MILE END.—TO BE LET, on building leases, for eighty years, a valuable FREEHOLD BUILDING SITE, with extensive frontage to North street, containing an area of nearly three quarters of an acre, and suitable for the erection of factories, model-lodging-houses, shops, or dwelling-houses. For plan and particulars, apply to Mr. N. S. JOSEPH, Architect, 27A, Bucklersbury, Cheapside.

TO BUILDERS.—There is no town in the United Kingdom making more rapid progress in its trade, manufactures, and population than Dundee, on the Estuary of the Tay, north-east coast of Scotland. The manufacture of jute as a substitute for cotton has taken firm root in Dundee, and is advancing at a rapid rate, and wealth is being rapidly accumulated. The Farms of Balgay and Logie, now used for agricultural purposes, are to a large extent within the municipal boundaries. Logie lies between the ancient town of Dundee and Lochee, a great manufacturing place which has arisen within a mile and a half of the High-street, and is now part of the town. All the Logie Farm must be let upon for the working classes, and for manufacturers, as the trade advances. Balgay is being disposed of for villas. There are not at present any speculative builders in Dundee; each man builds his own house for himself. The Proprietors of Balgay and Logie are desirous to deal with men of capital and enterprise, for GIVING OFF in perpetuity LARGE BLOCKS for ANNUAL RENTS, along a proposed leading street to pass from Dundee to Lochee.—Applications may be made to Mr. SCOTT, Architect, 4, Reform-street, Dundee; or to Mr. C. KERR, Castle-street, Dundee.

TO BRASS and COCK FOUNDERS.—TO BE SOLD, the GOODWILL and STOCK-IN-TRADE of a Brass and Cock Founder, and Pump and Water Closet Manufacturer. Established for the last sixty years. Net profits from 500l. to 600l. a-year. About 700l. required. For further particulars, apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

TO BE DISPOSED OF, the old-established HORTICULTURAL WORKS, 165, King's-road, Chelsea, very extensive Nursery premises, having sufficient room for another business. Twelve years of the lease unexpired. Parties wishing to take it would only be required to take the necessary stock and machines, with a small amount of the stock, and shops, by valuation or otherwise, as agreed on, E. D. retiring from business.

PLASTER ENRICHMENTS, CENTRE FLOWERS, SHOP FRONT TRUSSES, VASES, ROYAL ARMS, CAPITALS,
And every description of ornament for internal and external decorations, executed in Plaster, Carton Pierre, Composition, and every kind of Cement, at reduced prices.
MESSRS. HERBERT, MODELLERS,
249, EUSTON ROAD, ST. PANCRAS.
Best Gelatine, prepared, and ready for moulding 2s. per lb.

PRIZE WAGGONS and CARTS.—HAYES & SON,
Manufacturers to Her Majesty's Board of Ordnance, and all the principal Railways in the Kingdom,
Coach and Cart Wheelwrights, Spring Van and Waggon Builders, Timber Merchants, Contractors, &c.
Manufacturers of Carts, Vans, Waggons, Trucks, and Implements for all Railways, Town use, Agriculture, and Exportation
Contractors' and Builders' Dobbin and other Carts, Barrows; Navvy, Excavators', Crowding, and Off-bearing ditto, on the shortest notice and of the best materials; &c.
HAYES & SON,
SCOTGATE WORKS STAMFORD.

TO ARCHITECTS, BUILDERS, RAILWAY CONTRACTORS, AUCTIONEERS, &c.—SPECIFICATIONS, CONTRACTS, ACCOUNTS, and every other description of DOCUMENTS, correctly and expeditiously COPIED, at 1½d per folio of seventy-two words, by FRY & SON, Law Stationers, Printers, and Lithographers, 11 and 14, Southampton-buildings, Chancery-lane, W.C. Plans and drawings copied, enlarged, or reduced, on reasonable terms.

THE NEW PATENT OLEOCHARTA, or WASHABLE HOUSE PAPER,
FOR FLOORS, WALLS, CEILINGS, OR OTHERWISE.
Warranted superior to paint, and to maintain its colour and appearance for at least. Sole Manufacturers, ROSE & PILTZ, No. 20, Tranquiller-terrace, Chancellor road, Hammersmith.

CARTS, LADDERS, BARROWS, &c.—GEORGE ELL & CO. Builders of Carts, Vans, Waggons, Trucks, and Manufacturers of Implements for Railways, Town use, Agriculture, and Exportation.
LADDERS, BARROWS, TRESTLES, STEPS, PORTABLE SCAFFOLDS,
and every description of Contractors', Builders', and Decorators' Trade Requisites.
Vans, Waggons, Dobbin and other Carts, specially adapted for exportation. Pug-mills, Jack-rolls, Trolleys, and Portable Railways. Scaffolding, Ladders, Barrows, Trestles, Steps, &c. Lent on Hire. Price Lists on application.
GEORGE ELL & CO.
EUSTON WORKS, 365 and 368, EUSTON ROAD, LONDON, N.W.

POLYTECHNIC.—Patron: H.R.H. the PRINCE of WALES.—Professor Pepper's adaptation of the original and most amusing Ghost Illusions of H. Dircks, esq. C.E. in 3 scenes. First Scene—Reading from Dickens's "Haunted Man," and appearance of the Ghost and Spectre of the sister. Second Scene—The Artist's Studio—the ghostly visitor in the form of a rival artist—the Ghost drinking a glass of water! (this illusion must be seen to be believed)—the living young lovers pierced by the spectre. Third Scene—the reading of the letter, and mysterious arrival of the little postman "Cupid." Engagement of Mdlle. Cavalho, for her new Vocal, Organophonic, and Ventriloquial Entertainment. Herr Susman's celebrated marionettes of birds and animals. In consequence of numerous inquiries the opera of "Der Freischutz" is reproduced. Open Twelve to Five and Seven to Ten o'clock.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of COX & WYMAN, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-fields; and published by the said CHARLES WYMAN, at the OFFICE of "THE BUILDER," No 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, November 14, 1863.

BUILDERS' BENEVOLENT INSTITUTION.—THURSDAY NEXT.—AN ELECTION of Three PENSIONERS, two Males and one Female, will take place on THURSDAY, the 26th inst. at the LONDON TAVERN. Mr. Alderman JAMES C. LAWRENCE, President of the Institution, in the Chair. Polling commences at TWELVE and closes at THREE o'clock precisely.

A. G. HARRIS, Sec.

November 20, 1863.

ROYAL INSTITUTE of BRITISH ARCHITECTS.—A SELECTION from the DRAWINGS and DESIGNS of the late Professor COCKERELL, R.A., and late President of the Royal Institute of British Architects, is now EXHIBITED at the Rooms, 9, Conduit street.—Members of the Institute should give their cards of admission to their friends; but ladies and gentlemen leaving their private cards at the door will be admitted between the hours of ELEVEN and FOUR each day till SATURDAY, 28th NOVEMBER inst.

ARCHITECTURAL UNION COMPANY (LIMITED).—Notice is hereby given, that the SIXTH ANNUAL ORDINARY GENERAL MEETING of this COMPANY will be held on WEDNESDAY, the 2nd of DECEMBER next, at THREE o'clock p.m. at the Premises of the Company, No. 2 Conduit-street, Regent street, to receive the directors' report and audited balance-sheet, to declare a dividend, and to transact the business required to be transacted at the ordinary general meetings of this Company.

JAMES EDMESTON, Hon. Sec.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

72—74, Bishopsgate-street Within, November, 1863.

EDWARD MATHEWS, Deceased.—Pursuant to an Act of Parliament made and passed in the 22nd and 23rd years of the reign of her present Majesty Queen Victoria, cap. 35, intituled "An Act to further amend the Law of Property and to relieve Trustees." Notice is hereby given, that all Creditors and other Persons having any CLAIM or DEMAND upon or against the ESTATE of EDWARD MATHEWS, late of Hawley-road West, Camden-town, in the county of Middlesex, Builder, deceased (who died on the 14th day of October, 1863, and whose will was proved in the principal Registry of her Majesty's Court of Probate, on the 9th day of November, 1863, by Simon Caddeclugh, of the Prince of Wales-road, Haverstock hill, in the county of Middlesex, Doctor of Medicine, and Thomas Dunckley, of 22, Gower-place, Euston square, in the said county of Middlesex, Builder, the Executors named in the said will), are hereby required to send in the particulars of their claims and demands, in writing, to the undersigned, GEORGE WRIGHT GREENWOOD, the Solicitor to the said Executors, at his Office, situate at No. 89, Chancery-lane, in the county of Middlesex, on or before the 30th day of DECEMBER next, at the expiration of which time the said Executors will proceed to distribute the estate of the said deceased among the parties entitled thereto, having regard only to the debts, claims, and demands of which they shall then have received notice; and the said Executors will not be liable for the assets so distributed, or any part or parts thereof, to any person or persons of whose debts, claims, and demands they shall then not have had notice.—Dated this 9th day of November, 1863.

G. W. GREENWOOD, Solicitor for the said Executors.

89, Chancery-lane, Middlesex.

SOUTH KENSINGTON MUSEUM.—The ART DIVISION in the North and South Courts will be CLOSED from 23rd NOVEMBER to the 2nd DECEMBER, for re-arrangement. The Sheepshanks Pictures and the other Divisions will continue to be exhibited.

By order of the Committee of Council on Education.

NOTICE.—LONDON and WESTMINSTER BANK, LAMBETH BRANCH, 34, Mount-Street.—GEORGE TOZER, Local Manager.—The London and Westminster Bank having received notice from the Vestry of the Parish of Lambeth, that the Metropolitan Board of Works have directed that Mount-street, Lambeth, should hereafter be called Westminster Bridge-road, and numbered accordingly, hereby give notice, that from and after this date the business of the Lambeth Branch will be carried on at the same premises, but bearing the altered number and name of 91, WESTMINSTER BRIDGE ROAD, S. and all communications connected with that Branch are requested to be so addressed.—By order of the Board,

WM. EWINGS, General Manager.

November 11th, 1863.

ECCLESIASTICAL EMBROIDERY and TAPESTRY for Church Decoration, and VESTMENTS designed and prepared for ladies' own working, by

RODOLPHE HELBRONER,

265, REGENT STREET, near the Polytechnic.

Gold and silver fabrics, fringes, thread and laces, velvets, silks, cloth, linen, and every other requirement for CHURCH NEEDLEWORK.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have consequently reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr. TYLER, 12, Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

COMPETITIONS.

BOROUGH of CONGLETON, in the County of Chester.—NEW TOWN HALL.—The Corporation of Congleton are desirous of receiving PLANS for the ERECTION of a NEW TOWN HALL, to contain an Assembly Room, Court Room, with suitable Ante-rooms, and a Residence for hallkeeper.—Full particulars, and plans of the proposed site, and all other information, may be obtained on application to Mr. MOGHOUSE, the Town Clerk.—All the plans and designs must be sent to the Town Clerk, on or before the 1st JANUARY, 1864. A Premium of £25. will be given for the Plans and Designs which the Corporation shall ultimately select.

CONTRACTS.

BOSHAM MUDLAND, SUSSEX.—RECLAMATION of MUDLAND.—ERECTION of SEA WALL.—To CONTRACTORS and Others.—Notice is hereby given, that it is intended to RECLAIM from the SEA all that tract of MUDLAND, known as BOSHAM CREEK, situate at Bosham, Sussex, and also to restore the Sea Wall or Embankment there situate. The Works are to be performed in accordance with certain drawings and specifications which may be seen at my Office on and after the 10th NOVEMBER next, and under the direction of JAMES BRUNLEES, Esq. of 5, Victoria-street, Westminster, Civil Engineer. Tenders to be sent to me on or before the 10th day of DECEMBER next.

R. G. RAPER, Chichester, Steward of the Manor and Hundred of Bosham, Sussex.

CAST-IRON WATER-TANK.—Notice is hereby given, that the Sheerness Local Board of Health are ready to receive TENDERS from persons desirous of contracting with them, for SUPPLYING and FIXING a CAST-IRON WATER-TANK, capable of containing 145,000 gallons, and for PURCHASING about 40 tons of WROUGHT IRON PLATES, now in the possession of the Board. Plans, sections, and specification may be seen at the Office of the Surveyor. Sealed Tenders, indorsed "Tender for Water-Tank," must be delivered at the Office of the Board, on the SIX o'clock, on the evening of THURSDAY, the 26th day of NOVEMBER, 1863. The Board do not bind themselves to accept the lowest or any Tender.

By order of the Sheerness Local Board of Health,

EDWARD FELKIN, Clerk.

Office of the Local Board of Health, Sheerness,
November 10th, 1863.

CITY of LONDON FREEHOLD LAND TO BE SOLD, by TENDER.—To PUBLIC COMPANIES, BANKERS, HOTEL BUILDERS, CAPITALISTS, and OTHERS.—TO BE SOLD by TENDER, a FREEHOLD PLOT of LAND, with the Buildings thereon, containing about 4,300 square feet, situate in Leader hall street, directly opposite the new and handsome building now erecting on the site of the late East-India House. On part of the Premises the business of a Tavern is being carried on, and the purchaser will be required to take the fixtures and licence in the usual way.—Printed forms of Tender, which alone will be received, may be had of Messrs. BRUCE & SONS, 10, Bucklersbury, City, and are to be delivered at their Office as aforesaid, by TWO o'clock in the afternoon of the 9th day of DECEMBER, 1863.

TENDERS.—Notice is hereby given that the Hastings Local Board of Health are ready to receive TENDERS from persons desirous of CONTRACTING with them for LAYING WATER MAINS, about 3,000 yards.—The specification may be seen, and further particulars had on application at the Town Clerk's Office, High-street, Hastings, where Tenders, duly signed must be delivered before TEN o'clock on the morning of FRIDAY, the 27th day of NOVEMBER inst. The Local Board do not bind themselves to accept the lowest or any Tender.

ROBERT GROWSE, Town Clerk.

Hastings, November 11, 1863.

CONTRACTS.

WEAR NAVIGATION and SUNDERLAND DOCK ACT, 1859.—To CONTRACTORS.—The River Wear Commissioners are prepared to receive TENDERS for the CONSTRUCTION of a WET DOCK and ENTRANCES, and other Works connected therewith, at the South Docks, Sunderland, in conformity with drawings, specifications, and conditions, which may be seen, and further particulars obtained, upon application to THOMAS MEIK, Esq. C.E. Engineer's Office, Harbour and Dock Works, Sunderland, on and after the 9th of NOVEMBER, 1863. Tenders, on printed forms, attached to specifications, which only will be received, and inclosed under printed covers, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," to be delivered at 19, Fawcett-street, Sunderland, not later than NOON on the 14th of DECEMBER, 1863. Copies of the specifications and conditions, with form of Tender, and of a bill of quantities, prepared for the convenience of Contractors, can be had by parties Tendering upon payment of 5l. 5s. The Commissioners do not bind themselves to accept the lowest or any Tender.—By order,

J. S. ROBINSON, Clerk to the Commissioners.

Sunderland, October 28, 1863.

WEAR NAVIGATION and SUNDERLAND DOCK ACT, 1859.—To CONTRACTORS.—The River Wear Commissioners are prepared to receive TENDERS for the CONSTRUCTION of a GRAVING DOCK and other Works connected therewith, at the South Docks, Sunderland, in conformity with drawings, specification, and conditions, which may be seen, and further particulars obtained, upon application to THOMAS MEIK, Esq. C.E. Engineer's Office, Harbour and Dock Works, Sunderland, on and after 9th NOVEMBER, 1863. Tenders, on printed forms, attached to specification, which only will be received, and enclosed under printed covers, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," to be delivered at 19, Fawcett-street, Sunderland, not later than NOON, on the 14th DECEMBER, 1863. Copies of the specification and conditions, with form of Tender, and of a bill of quantities, prepared for the convenience of contractors, can be had by parties tendering, upon payment of 5l. 5s. The Commissioners do not bind themselves to accept the lowest or any Tender.—By order,

J. S. ROBINSON, Clerk to the Commissioners.

Sunderland, October 28, 1863.

WEAR NAVIGATION and SUNDERLAND DOCK ACT, 1859.—To CONTRACTORS.—The River Wear Commissioners are prepared to receive TENDERS for the CONSTRUCTION of a WROUGHT-IRON CAISSON, for the Entrance of the intended Graving Dock, at the South Docks, Sunderland, in conformity with drawings, specification, and conditions, which may be seen, and further particulars obtained, upon application to THOMAS MEIK, Esq. C.E. Engineer's Office, Harbour and Dock Works, Sunderland, on and after 30th NOVEMBER, 1863. Tenders, on printed forms attached to specification, which only will be received, and enclosed under printed covers, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," to be delivered at 19, Fawcett-street, Sunderland, not later than NOON, on the 14th DECEMBER, 1863. Copies of the Specification and Conditions, with Form of Tender, can be had by parties tendering, on payment of 2l. 2s. The Commissioners do not bind themselves to accept the lowest or any Tender.—By order,

J. S. ROBINSON, Clerk to the Commissioners.

Sunderland, October 28, 1863.

WEAR NAVIGATION and SUNDERLAND DOCK ACT, 1859.—To CONTRACTORS.—The River Wear Commissioners are prepared to receive TENDERS for the CONSTRUCTION of a SEA WALL or PIER, and other WORKS in connexion with the North East Pier at the South Outlet of the South Docks, Sunderland, in conformity with drawings, specification, and conditions, which may be seen, and further particulars obtained, upon application to THOMAS MEIK, Esq. C.E. Engineer's Office, Harbour and Dock Works, Sunderland, on and after 30th NOVEMBER, 1863. Tenders, on printed forms, attached to specification, which only will be received, and inclosed under printed covers, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," to be delivered at 19, Fawcett-street, Sunderland, not later than NOON on the 14th DECEMBER, 1863. Copies of the specification and conditions, with form of Tender, and of a bill of quantities, prepared for the convenience of contractors, can be had by parties tendering upon payment of 2l. 2s. The Commissioners do not bind themselves to accept the lowest or any Tender.—By order,

J. S. ROBINSON, Clerk to the Commissioners.

Sunderland, October 28, 1863.

TO PRINTERS and STATIONERS.—The Board of Works for the Wandsworth district are desirous of receiving TENDERS for PRINTING, and the SUPPLY of STATIONERY for ONE YEAR, from Christmas next. Schedules of the articles likely to be required may be seen, and any further information obtained, at the Office of the Board as below, between the hours of TEN and FOUR.—Tenders are to be sent in under seal to the Board, on or before TUESDAY, the 1st DECEMBER next, endorsed "Tender for ——." The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District,

ARTHUR ARNOLD, Clerk to the Board.

Battersea-rise, Wandsworth, S.W. November 7, 1863.

TO DRAINAGE PIPE MANUFACTURERS.—BOROUGH of STOCKPORT.—The Local Board of Stockport is desirous to receive TENDERS for the SUPPLY of the following PIPES and BRICKS to be delivered in Stockport within the next three months as required:—

1,000 yards of 18-inch Glazed & Socketed Pipes.

Glazed Culvert Bricks per 1,000.			

The Board will not be bound to accept the lowest or any Tender.—Tenders to be sent in to my Office not later than the 23rd day of NOVEMBER instant.—By order,

EDWIN OLDHAM,
Town Clerk and Clerk to the Local Board.

Stockport, Nov. 12th, 1863.

[*For remainder of Contracts see next Page.*

CONTRACTS.

SAINT MARYLEBONE, November 12th, 1863. To CONTRACTORS for HOT-WATER WARMING APPARATUS.—Notice is hereby given, that the Vestry of the parish of St. Marylebone, in the county of Middlesex, will meet in the Board Room of the Court House of the said parish, on THURSDAY, the 26th day of NOVEMBER, 1863, at ELEVEN o'clock in the Forenoon, to receive TENDERS for the WARMING of TRINITY CHURCH, in the said parish, by Hot-water Pipes and Apparatus.—Further particulars may be known on application to the Vestry's Surveyor, Mr. ROBERT PEACE, at his daily attendance at the Court House, from TWELVE till ONE o'clock. Tenders, with plans, to be sent in sealed, and addressed to the Vestry's Surveyor, and indorsed "Tender for Hot-water Apparatus," before ELEVEN o'clock in the Forenoon of the said 26th day of NOVEMBER, 1863. The Vestry do not pledge themselves to accept the lowest or any of the Tenders. The Vestry will expect the Tenders to be given personally or by their duly authorized agent, to be in attendance at the time of opening the Tenders. By order,
W. E. GREENWELL, Vestry Clerk.

SURVEY and VALUATION of the PARISH of RICKMANSWORTH, HERTS, for the purpose of PAROCHIAL ASSESSMENTS.—The Board of Guardians of the Watford Union are desirous to receive TENDERS for a SURVEY and VALUATION (without making a Plan) of the HOUSES, MESSUAGES, LANDS, and other HEREDITAMENTS, liable to Poor Rates, in the said Parish of Rickmansworth, to be carefully and accurately made and fairly written in a proper book, with the several values and particulars of the several houses, buildings, and appurtenances, and of each field, close, and parcel of land, and of and other hereditaments as aforesaid, distinguished and set forth therein, according to and as indicated in the form of a schedule to be had of me, such survey and valuation to be complete and such book to be perfect and substantially and securely bound and delivered, with proper indices, to me not later than the end of FEBRUARY, 1864, and as much earlier as possible, the same to be paid for at per acre, which is to include and cover the survey and valuation of all Houses, Buildings, and Erections on the land, and all costs and expenses of and relating to such survey and valuation, the book, indices, and all other expenses whatever. The area of the parish is supposed to be about 9,947 acres, and the population according to the Census in 1861 was 4,412. The Tithe Map may be resorted to by the Surveyor and Valuer. Sealed Tenders addressed to "The Clerk to the Guardians, Watford, Herts," and to be endorsed "Tenders for Survey and Valuation of Rickmansworth Parish," to be sent to me on or before TUESDAY, the 24th day of NOVEMBER next. The Tenders will be opened at a Board Meeting, to be held at the Watford Union Workhouse, on WEDNESDAY, the 25th day of NOVEMBER next when parties tendering will be expected to attend the Board at ONE o'clock precisely. The Guardians will not pay any travelling or other expenses, and will not bind themselves to accept the lowest or any other Tender. References and testimonials may be transmitted with the Tenders.—Communications for information to be addressed to me,
RICHARD PUGH, Solicitor, Watford,
Watford, Oct. 29th, 1863. Clerk to the Board.

TO IRON SHIP and BARGE BUILDERS. The Iron Steam-Boat Company and the City Steam-Boat Company, Limited, are ready to receive TENDERS for an IRON DUMMY, specifications for which may be seen at the Offices of the Companies, 53, Mark-lane, E.C. and 7, Chatham-place, Blackfriars, E.C. Tenders, which are to be sealed, will not be received after MONDAY, the 30th instant.—The Companies do not undertake to accept the lowest Tender.

OXFORD PAVING ACTS.—CONTRACT for PAVING.—Persons desirous of TENDERING for PROVIDING and LAYING YORK CURB, and PAVING FOOTWAYS, and GRANITE PAVING for ROADWAYS, and other Works, for the Oxford Paving Commissioners, for the term of One Year, Two, and Three Years, from the 1st of JANUARY, 1864, may see the specifications, and obtain particulars of the forms of Tender at the Commissioners' Office, No. 7, St. Aldate's-street, daily, from NINE till FOUR, or by letter, addressed to Mr. JOHN GALPIN, the Surveyor. Sealed Tenders are to be delivered at his Office, in St. Giles, on or before MONDAY, the 30th instant, endorsed "Tender for Paving"—By order of the Commissioners FREDERICK J. BURRELL, Clerk.
St. Giles, Oxford, November 17th, 1863.

TO BUILDERS. TENDERS are required for BUILDING a DWELLING-HOUSE, SHOPS, WAREHOUSE, and PREMISES in the Corn Market, Oxford, for Messrs. Grimsby, Hughes, & Dewe, wholesale and retail grocers and provision merchants. Copies of the quantities may be obtained on and after the 29th day of NOVEMBER, by applying to Mr. WILKINSON, Architect, Oxford, at whose Office all the plans may be seen on receipt of Tender.—Tenders to be sent to Mr. WILKINSON at Lincoln "Tender for Works in the Corn Market, Oxford," on or before the 23rd day of DECEMBER, 1863. The lowest Tender will not necessarily be accepted.
November 11th, 1863.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of New PREMISES for the London and County Bank, in the High-street, Winchester, can inspect the plans and specifications at the London and County Bank, Winchester; or at the Offices of the Architect, Mr. FRED. CHANCELLOR, Painters' Hall, Old Broad street, London, after the 16th NOVEMBER. The Tenders to be delivered at the Offices of the Architect, before TWELVE o'clock on the 30th of NOVEMBER. The lowest or any Tender will not necessarily be accepted.
Painters' Hall, Old Broad street, November 9, 1863.

TO BUILDERS, &c.—Persons desirous of CONTRACTING for the ERECTION of TWO ADDITIONAL WINGS to the North Wales Counties Lunatic Asylum at Denbigh, for the reception of 170 Patients, may see the plans and specifications on application to Mr ROBINSON, Clerk to the Committee of Visitors, at his office in the Asylum, where they are now ready for inspection. Sealed Tenders to be sent in, addressed to the Chairman of the Committee, by the 14th of DECEMBER next. The contractor will be required to give proper security for the due performance of the work, and the committee do not bind themselves to accept the lowest or any Tender. By order,
JOHN ROBINSON, Clerk to the Committee of Visitors.
November 11th, 1863.

TO STONE MERCHANTS, DRAIN-PIPE MAKERS, MASONS and PAVIORS, CONTRACTORS, and OTHERS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the SUPPLY of BROKEN GUERNSEY GRANITE, and other Stone and Materials, and for the Supply of Drain-pipes, in the whole of the District, also for the Execution of Masons' and Paviors' Work, and of the various Jobbing Works, in repairing and making good, to Sewers and Gullies, and for Laying Drain-pipes; also for the Supply of Horses on hire, and for Large Work, at the Parker and Batterses Quarries, in Wandsworth; and also for Dusting in the Parishes of Battersea and Putney, and for Dusting and Scavenging in the Parish of Clapham. The Contracts are to be for one year, from 31st December next. Separate Tenders are to be sent in for each parish, excepting those for granite and drain-pipes, for each of which a Tender for the whole district must be sent in. The specifications and forms of Tender may be obtained, at the Offices of the Board, Battersea Rise, between the hours of TEN and FOUR. Tenders are to be sent in, under seal, to the Board, endorsed "Tender for Supply of ——," on or before TUESDAY, the 1st DECEMBER next; security will be required for the due performance of the respective Contracts, the Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District,
ARTHUR ALEX. CORBELLIS, Clerk to the Board.
Battersea Rise, Wandsworth, S.W. November 7th, 1863.

TO BUILDERS.—The Burial Board for the Parish of St. Margaret, Rochester, are desirous of receiving TENDERS for the ERECTION of TWO CHAPELS, with Bell-tower, Lodge, Entrance-gates, Fence walls, &c. Persons desirous of Tendering may see the plans and specifications, and obtain forms of Tender, at the Office of Mr. MARTIN BULMER, Architect, Maidstone, on and after THURSDAY, the 12th day of NOVEMBER. Tenders to be delivered at the Office of the Clerk to the Burial Board, Orange-terrace, Star hill, Rochester, on or before SIX o'clock p.m. on FRIDAY, the 11th day of DECEMBER next, endorsed "Tender for Cemetery Buildings, &c." The Burial Board do not bind themselves to accept either the lowest or any other Tender; and they will require satisfactory security for the proper performance of the Contract.
THOMAS S. WARNE, Clerk to the Burial Board.
Rochester, November 9, 1863.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION.——INSPECTION OF SHOW-ROOM REQUESTED.

MANTEL PIECES, ENGLISH AND FOREIGN,

IN EVERY VARIETY OF DESIGN AND COST,

Have been added to their LARGE and EXCELLENT ASSORTMENT of FINE FINISHED STOVES FENDERS, &c. in the NEW SHOW ROOMS of the

GENERAL IRON FOUNDRY COMPANY (LIMITED),

At No. 43, UPPER THAMES STREET, LONDON.

By an arrangement with Mr. WILLIAM POTTS, of Birmingham, the Company have the exclusive Right of Sale of his ART MANTELS in the London District. These Works are of the HIGHEST EXCELLENCE in DESIGN and FINISH, very beautiful, and durable. They also beg to call special attention to the beautiful and varied productions in ART BRONZES and METAL WORK, adapted for ARCHITECTURAL and CABINET DECORATION, MURAL MONUMENTS, &c. now on view in their Rooms. Also to the following Articles of their Manufacture, viz.

PATENT WROUGHT IRON WINDOWS,

Strong, light, durable, easily fixed, cheap, and free from risk of breakage.

BILLING'S PATENT CHIMNEY THROATS AND AIR APPARATUS,

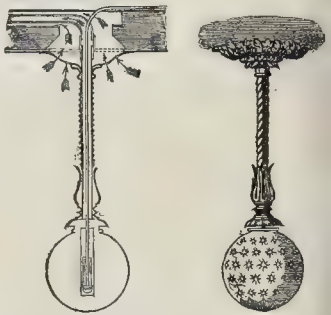
Most effective for the Cure of Smoky Chimneys.

FIRST-CLASS COOKING APPARATUS,

For Club Houses, Hotels, Restaurants, &c.

NO CHIMNEY WANTED

FOR RICKETS & HAMMOND'S PATENT CALORIFERE GAS STOVES, in Churches, Halls, or Shops; and for Conservatories, or any close apartment, a Pipe can be attached to carry away the burnt air.



No. 5, CHANDOS STREET, CHARING CROSS, LONDON, W.C.

LIBERAL DISCOUNT TO THE TRADE.

RICKET'S & HAMMOND'S

VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient, simple, and efficient ventilation.

The advantages obtained are these.—

A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.

A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.

AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.

A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.

No. 5, CHANDOS STREET, CHARING CROSS, LONDON, W.C.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.

ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give as much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

COMBINED MACHINE, capable of sawing, cross-cutting any length, mitering, tenoning, rabbeting, grooving, &c. 9f. 9s. This machine may also be used for moulding, beading, tonguing, and trenching, for an additional sum of 4l. 4s.—For further particulars apply to ARTHUR & JAMES RIGG, Engineers, George-street, Chester.

THE PRIZE MEDALS,

LONDON, 1851. PARIS, 1855. LONDON, 1862.

PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM.

SECURITY FROM ACCIDENT by the use of the Patent Halter Guide and Improved Curved Top-plate; PROMOTION of HEALTH, COMFORT, and CONDITION, by the cleanliness and power of resisting infection of the Mangers and Troughs; and also of the Patent Drop Cover, to curtail the quantity of water to be imbibed. ECONOMY in the USE of FOOD, from the improved formation of the Fittings, and by means of the Patent Portable Seed-box, are some of the peculiar recommendations of Cottam's Patent Componised, Enamelled, and Galvanized Iron Fittings for Stalls and Loose Boxes.

COTTAM'S PATENT COMBINED SADDLE and HARNESS BRACKETS; IMPROVED SURFACE GUTTER, WITH MOVEABLE SAFETY COVERS; Sanitary Traps, Cheap and Durable Corn-bins, and every Article requisite for the Stable and Harness-room.

IRON GATES, FENCING, and HURDLES MADE by MACHINERY.

COTTAM'S newly-invented REGISTERED NOISELESS MANGER SHACKLE and GUIDE FOR HALTER-STRAP, and IMPROVED VENTILATING HARNESS BRACKETS, are only to be obtained from the Inventors, and can be seen in use at their Manufactory.

COTTAM & CO. exhibit for inspection, at their Iron Works, 2, Winsley-street, W., an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.

ILLUSTRATED CATALOGUES and LITHOGRAPHS free, on application to COTTAM and CO. 2, WINSLEY STREET, Oxford-street, London, W.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

WILLIAM FURNESS,

No. 73, LIME STREET (late of Lawton Street), LIVERPOOL.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of *side by side*; and the ROASTER is constantly replenished with fresh air."

INVENTORS AND MANUFACTURERS,

JONES & ROWE, WORCESTER,

AGENTS FOR LONDON: BARRON, SON, & WILSON, 438, STRAND, W.C.

Illustrated Catalogues, with Testimonials and Prices, forwarded on application.

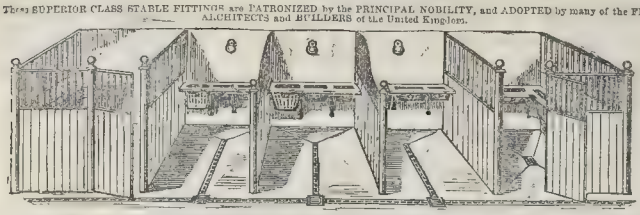
GAS.—SAVING OF 40 PER CENT. NORDHOFF & CO.'S PATENT GAS CARBURETTING APPARATUS offers the following highly important Advantages to Consumers of Gas:—

1. Great Economy—a saving of at least FORTY per Cent.
2. Perfect Purity of the Carburetted Gas.
3. Threefold Increase of the Intensity of Light.
4. Simplicity and Safety of the Apparatus.
5. Certainty of Supply.
6. No Alteration in Gas-fittings required.

Sole Agent for the United Kingdom,

Mr. MAX SABEL,

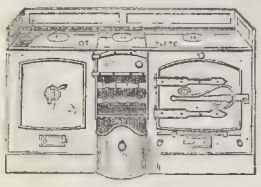
No. 2, Coleman-street Buildings, Moorgate-street, City, London.



*** RESPECTABLE AGENTS WANTED.

New Illustrated GASELIER CATALOGUE, complete, price 1s. to the trade (post-free).

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.



BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS AND ENAMELLED MANGERS.

These SUPERIOR CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

J. BARTON solicits attention to the NEW STABLE just completed, with full-size Stalls, Loose Boxes, and Harness Room, now open for inspection, at the Manufactory, 370, Oxford-street, where an extensive assortment of all kinds of Stable Furniture, upon the most modern and improved principles, are to be seen.
A new Illustrated Catalogue, with numerous engravings of the improved method of fitting up Stables, forwarded on receipt of four stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BURT & POTTS,

WHOLESALE AND MANUFACTURING IRONMONGERS,
38 and 65, York-street, Westminster.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

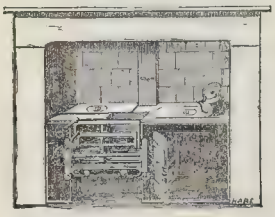
Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Monday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours at a cost of 3d.; and deserves special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

BROWN & GREEN'S
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and



CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c. they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,

Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and pain columns, panelled dados, all kinds of diaper, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

Asphalte for Railway Arches and Iron Bridges.

MONEY.—IMMEDIATE CASH ADVANCES MADE ON FREEHOLD, LEASEHOLD, and COPYHOLD PROPERTY TIMBER, WINE, and SPIRIT WARRANTS. BANKRUPTS' and INSOLVENTS' CASES CONDUCTED. Balance-sheets Prepared, and Meetings of Creditors Convened. Mr. RICHARD CROSSLEY, ACCOUNTANT and BUSINESS AGENT, 17, Moorgate-street, Bank, London.

ADVANTAGEOUS to BUILDERS.—MONEY obtained at a short notice on MORTGAGES and other SECURITIES. Moderate charges.—Apply personally, or by letter, to Mr. SYDNEY SMITH, Accountant, 19, Coleman street, E.C.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100*l.* to 1,000*l.* upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

The Builder.

VOL. XXI.—No. 1085.

The Holborn Valley Competition.

CTING, as it would seem, without full knowledge of their position, the Corporation rushed into the offer of premiums for plans for raising Holborn Valley, and making such improvements adjacent as would conduce to the convenience of the public, and have thus given a large number of architects and engineers, as well as themselves, a great deal of unnecessary and fruitless trouble. The loss, by death, of their late solicitor and of their esteemed architect, who had the whole matter at their fingers' ends, as well as of two other officers, may to some extent account for this. Had these gentlemen been in their places the Corporation would doubtless have been reminded that the terms of the existing Act of Parliament, granting the reversion of the 4d. coal-duty for the purposes of the improvement, seem to enforce the *destruction altogether of the present hills.* Certain it is that the realization of this fact, or at any rate of this belief, at once led to the throwing out of 96 of the 105 designs sent in, leaving only nine for the real consideration of the committee, and some of these were so manifestly crude that they were at once put on one side. The authors of the other ninety-six designs, some of which are most thoughtful and artist-like projects, had no standing whatever, and might have saved their pains and money had they been properly instructed: many of them, indeed, might have done so by a careful reading of the advertisement offering the premiums; for this distinctly asks for "designs with descriptions, plans, sections, and estimates, for '*raising Holborn Valley,*' and making such alterations," &c. &c.

The field for selection for the premiums became, therefore, very small; and we may as well say, although a little out of the order of relation, that the committee recommend the plan by Mr. R. Bell for the first premium, 250*l.*; and that of Mr. T. C. Sorby for the second, 150*l.*; a plan by Mr. Marrable standing third. It is to be hoped that some additional premiums will be awarded to the most meritorious designs in other classes.

Let us now retrograde a little, and give some few particulars of the proceedings and of some of the designs sent in. As we mentioned in our last, the committee called to their assistance Mr. W. Haywood, who withdrew a design he had himself submitted, and they set aside those said not to comply with the several conditions stated in the advertisement, leaving thirty-eight for future consideration. These were sorted into nine classes, and for six days have been open for the examination of the public in the Guildhall. They were under the following heads, and were chiefly illustrated by the competitors whose names we attach.

Class 1.—Nine designs for constructing complete viaducts, or high-level roadways, upon the line of Holborn-hill and Skinner-street, involving the entire removal of the present surface and the property on both sides. T. C. Sorby, R. Bell, F. Marrable, L. H. Isaacs, R. Kerr, J. W. Papworth, E. Blatchley, F. G. Mullholland, and J. Scott Tucker.

Class 2.—Four designs for viaducts to be constructed upon the north side only, the carriage-ways and the property upon the south side of Holborn-hill and Skinner-street being untouched. F. Marrable.

Class 3.—Four designs for viaducts upon the south side only, the roadway and property upon the north side being untouched. J. Turner, S. Heming, "Utilitas" (model).

Class 4.—Three designs for central viaducts, upon the lines of Holborn and Skinner-street, some leaving parts of existing footways and roadways. James Thomson. (Cleverly set forth, but a mistake.)

Class 5.—One design for viaducts on both sides of the present streets, leaving the centre of the roads as at present, to communicate with the lower level. "Utilitas."

Class 6.—One design for viaduct occupying the whole of Skinner-street and south side of Holborn only.

Class 7.—Eight designs for high-level streets or viaducts passing south of Holborn-hill and Skinner-street, which thoroughfares are to remain as at present, or with but very trifling modifications. F. Wallen (admirably set forth), R. Kerr, L. H. Isaacs, H. B. Garling, N. S. Joseph.

Class 8.—Three designs for high-level streets or viaducts passing north of Holborn-hill and Skinner-street, which thoroughfares are to remain as at present, or with but very trifling modification. L. H. Isaacs, W. Parkes.

Class 9.—Five designs for improving the present gradients by partly filling up the valley, and forming the approaches in Farringdon-street and Farringdon-road by inclinations. J. T. Atkinson and Messrs. Brandon & Freshwater, Messrs. Papworth.

The designs representing four of these classes,—viz, 1, 7, 8, and 9,—submitted by the committee to the Court of Common Council as representing the principles embodied in each of them, we pointed out in our last.

The ultimate recommendation of the committee we have already referred to. In looking to the plans selected as No. 1 (Bell) and No. 2 (Sorby), some striking discrepancies present themselves; and we fail to detect on what grounds No. 1 has its place above No. 2, though we say this with great reserve, knowing on what minute points alone the difference must rest. No. 1 proposes to make the road 80 feet wide; his viaduct is 1,200 feet long, and he puts the cost of the scheme at 143,000*l.*,—a ridiculously erroneous estimate, as we think. No. 2 has his roadway from 60 to 70 feet in width, 1,180 feet in length, and calls the cost 530,800*l.* The latter gives a headway under his iron bridge across Farringdon-street of 27 feet 6 inches in centre, while No. 1, raising Farringdon-street at that point 1 foot 3 inches, calls the headway of his bridge 17 feet 6 inches; yet both viaducts are level. One of the new streets proposed by No. 1 leaves land only 50 feet wide for a double frontage!

Sufficient time was not given to competitors to master the small details on which the goodness or badness of the plan must depend, and it is more than likely that neither of the premiated designs will be carried out. In fact, we have reason to believe, that the plans and notices which are now being prepared, in order to go to Parliament this coming session, are being founded on the design withdrawn by Mr. Haywood from the competition, the result of a long official acquaintance with the roads. One feature peculiar to this plan is the gradual raising of the road in Farringdon-street to a height of 10 feet in the valley, with a view to lessen the gradients of the side streets leading to the new high level of Holborn and Skinner-street. Observations show that, of a traffic of 9,950 vehicles passing through Holborn-hill, 1,013, or about one-tenth, go up and down from the low levels; and of 10,723 passing through Skinner-street and Snow-hill, 3,219, or about three-tenths, go up and down from the low levels. So that a complete and perfect plan can only be that which substitutes improved roads between the high and low levels, as well as forms a good road for the east and west traffic.

Looking to the particulars which accompanied Mr. Haywood's design, when it was sent in anonymously, we find that the property upon both sides of the streets between Hatton-garden and the western end of St. Sepulchre's Church would be taken down, and a high level roadway upon arches made between those points, 70 feet in width, and nearly level.

"It is to be formed," said the author, "more upon the southern than upon the northern side of the existing roadways, inasmuch as the curve will be less, the vista longer, and the architectural effect better.

Farringdon-street is to be crossed by a bridge, with a minimum central headway of 21 feet; this is higher than Temple Bar, which has a central headway of 17 feet 9 inches, and will be higher than the bridge to be built over Ludgate-hill, which is to have an 18 feet headway.

Shoe-lane is to be crossed by a bridge, leaving a clear headway of 16 feet; the gradient of the lane will be improved, and the street will be continued northwards 30 feet in width.

Portions of Farringdon-street and Victoria-street are to be altered in level; Farringdon-street is to begin to rise from Newcastle-street, with a gradient of 1 in 45, and continue at that slope to West-street'; thence it is to fall northwards with a gradient of 1 in 535 (or practically level) as far as to Charles-street.

Two levels for the traffic will be therefore obtained; the traffic north and south will pass beneath the bridge, that going east and west will go over the bridge: thus the two lines of traffic can never clash, as they now do, at the junction of Fleet-street, New Bridge-street, and Ludgate-hill.

Victoria-street is to be widened as far as to West-street to the present width of Farringdon-street.

Flights of steps formed at the angles of the bridge are to afford to pedestrians communication with the upper and lower levels.

Two streets, with easy gradients, are to be formed, to afford communication for vehicles, between the upper and lower levels; they are both to start from Victoria-street.

The western street to start opposite to that now in course of formation by the Corporation, and join the upper level at Hatton-garden; the gradient to be 1 in 45.

The eastern street is to start a little north of the bridge over Farringdon-street, and join the upper level by St. Sepulchre's Church; the gradient to be 1 in 45."*

---

* Notice of intended application to Parliament in the next Session has been given, to authorise the Corporation of London to make a viaduct for the purpose of a high-level street commencing on Holborn-hill, near Ely-court, passing Hatton-garden, Ely-rents, Ely-place, and terminating in Skinner-street, near the Old Bailey. The following improvements are specified in connexion with the scheme:—A new street, commencing near the junction of Hatton-garden with Holborn-hill, and terminating in Farringdon-road, near West-street; a new street, commencing near St. Sepulchre's Church, Skinner-street, and terminating in Farringdon-road, about fifty yards to the north of Snow-hill; a new street, commencing by a junction with Shoe-lane, near St. Andrew's Church, passing under the viaduct, and terminating in the intended new street, at a point about forty-five yards west of its intended junction with Farringdon-road; a widening on the western side of Farringdon-road between Holborn-hill and the junction of the intended street, nearly opposite West-street; an alteration of the levels of Farringdon-street and Farringdon-road, commencing near Newcastle-street, and terminating about 239 feet north of New Charles-street; power to alter and improve the levels of the western approach to the Metropolitan Meat and Poultry Market in Smithfield; to widen the western end and northern

The cost was estimated at 226,988*l.* To carry out the improvement thoroughly, probably another 100,000*l.* must be added to this amount. Whether, after all, however, this design will be carried out, or by whom, cannot yet be said.

Touching this very important proposed improvement, the question of gradients is one of the greatest consequence. The following statement of the gradients of the main streets adjacent, prepared by Mr. Haywood for the committee, will be found valuable:—

	Gradients.
Farringdon-road—from New Charles-street to Farringdon-street	1 in 88
Fleet-street—from Ludgate-hill to Shoe-lane	1 in 49
„ Shoe-lane to Whitefriars	1 in 46
„ Whitefriars to Fetter-lane	1 in 56
New Bridge-street—from foot of Bridge to Earl-street	1 in 32
„ Earl street to Union-street	1 in 125
„ Crescent-place to Ludgate-hill	1 in 63
Farl-street	1 in 94
Aldersgate-street	1 in 160
Moorgate-street	1 in 440
Wormwood-street	1 in 60
Bartholomew-lane	1 in 35
Fish-street-hill	1 in 21
Regent-street—from Pall-mall to Circus	1 in 33
„ north end of Waterloo-place to Circus	1 in 30
Ludgate-hill—from bottom of hill to Ludgate-place	1 in 53
„ Ludgate-place to Belle Sauvage-yard	1 in 35
„ Belle Sauvage-yard to Boy-court	1 in 26
Ludgate-street—from Old Bailey to Pilgrim-street	1 in 25
„ Pilgrim-street to party-wall, between Nos. 38 and 39	1 in 37
„ party-wall to Stationers'-court	1 in 38
„ Stationers'-court to Ave Maria-lane	1 in 49
„ Ave Maria-lane to top of Ludgate-street	1 in 66
St. Paul's Churchyard from top of Ludgate-street	1 in 84
„ 57 feet from Ludgate-street to Dean's-court	1 in 118
„ Dean's-ct. to steps to St. Paul's	1 in 80
„ Facing steps to St. Paul's	1 in 110
„ steps to St. Paul's to Paul's-chain	1 in 421
Gilt-spur-street—from Smithfield to Ball-court	1 in 119
„ Ball-court to Green Dragon-yard	1 in 62
„ Green Dragon-yard to Newgate-street	1 in 52
Old Bailey—from Newgate-street to Fleet-lane has a mean gradient of	1 in 42
„ Fleet lane to Ludgate-hill has a mean gradient of	1 in 78
King-street—from St. John's-court to Snow-hill ditto	1 in 31
The Haymarket	1 in 32
Queen-street-place—from Thames-street to the Toll-bar of the Bridge	1 in 22

Holborn-hill, from the bottom of the hill to near Field-lane, has comparatively unobjectionable gradients, but from Field-lane to Hatton-garden it has gradients of from 1 in 15 to 1 in 27, and a mean gradient of 1 in 19 only. Skinner-street from Farringdon-street, to near the Saracen's Head-yard, has gradients of 1 in 20 to 1 in 24, the mean gradient being 1 in 22. These gradients are admitted to be unfit for any vehicular or equestrian traffic.

OUR RIVERS AND WATER SUPPLY.

The wet weather during this autumn and the damaging river floods indicate that official inquiry as to the condition of many districts may be made with advantage. Land drainage must go on; as, also, town sewerage and house drainage. The one involves increased productiveness and healthiness of the soil; the other increased value of human life and the healthiness of towns. Rivers, in England, have never received proper legislative attention from the State; and, as a consequence, we find rivers neglected, tampered with, and injured in every way possible. There are thousands of acres of unwholesome swampy land which might be made good, but which land is permanently waterlogged by mill-dams; and there are hundreds of houses standing on subsoil swamped by similar causes. There are many square miles of land in almost every river valley in England now and then laid under water by excessive river floods, as during this autumn. If the money value of the damage caused to land, to crops, to stock, to other property, and to human health, is rightly estimated, it will be found to represent the interest of a very large capital—probably more than would be required to remove objectionable mill-dams, to deepen and improve the outfall of rivers, to make new and more direct cuts for flood waters, and to embank flat districts now covered by flood waters, when there is a rise of only a few feet vertical in the brook, stream, or river waters.

A report on the river areas of England would necessarily fill one or more volumes. Take the area of the valley of the Thames, for instance. This, the first of English rivers, is simply in a condition disgraceful to us as a nation. Look at the condition of the low lands, especially at and near Oxford. There are miles square of country most injuriously laid under water almost every year. Then let the state of the water-supply to the metropolis be considered. The sewage of more than one million of people, besides vast areas of highly-manured lands, drain direct into the water of the river and tributary streams above the point at which water is taken by the several companies for the supply of London. The undiluted sewage of Oxford, Reading, Eaton, and Windsor, with many other places, pours out in a continuous stream, to mix with the water of the Thames above Teddington Lock.

There are remedies, and such that will pay for execution. Remove all objectionable mill-dams and obstructions; embank flat valley-lands; deepen the bed of the river, and otherwise improve it, where necessary; and establish conservators, whose duty it shall be to see to the execution and maintenance of all proper works and regulations on rivers. At present every man or proprietor does that which seemeth good (or bad) with the portion of river flowing past or through his estate.

London must have an abundant supply of water. It is now taken direct from the main stream below the points at which the water is made impure by sewage and surface washings. The Romans would have taken the tributary springs and tributary streams at their fountain-heads, and, by conduits and aqueducts, have conveyed the waters for use in a comparatively pure state. That which the Romans did with difficulty, with vast labour, and with vast cost, we could do with ease and with comparative economy. Modern potters can make earthenware pipes by machinery far larger and better than any used in ancient times, and at so small a cost as to be a wonder to potters, even in this age of cheap goods. These pipes could be laid along contour lines from the numerous upper springs which feed the Thames, so as to be collected in cast-iron pipes and be conveyed, under pressure direct to London, or to the existing pumping stations, to be lifted, as at present. When the health and comfort of 3,000,000 people are considered of more consequence than the vested interests of water companies, or when water companies see that, to secure their monopoly and to give fixed value to their property, the works must be the best for the people which all the circumstances will admit of, there may be a chance of such a work being undertaken. The proudest boast of a Cæsar was that he had given Rome an additional aqueduct, and a fuller and better supply of water.

The rivers of Lancashire and Yorkshire are neglected to the uttermost: they are abused in every way that rivers can be abused. Ashes and rubbish of all sorts are thrown in until the beds are filled up several feet deep. Any man who owns a frontage to a river may use the water and may abuse the river bed; any town may discharge in it its sewage; any print-works or dye-works may pour in the refuse dye or other fluid. Iron-works, gas-works, chemical works, all abuse the streams on which they are situate. One group of streams alone has a protecting power from Parliament—the Irwell and Mersey, above Manchester. This power has not, as yet, been exercised to any practical extent.

During the last century the nation has increased (almost doubled) in population, and more than doubled in wealth; vast progress has been made in agriculture and in trade. It may be said that land drainage, the steam engine, railways, steam navigation, and sanitary works, have been "created;" but our rivers are in a worse condition than when the Scotch rebels passed through the land in 1745. All forms of increase and of improvement in our river valleys and on our river banks have only tended to pollution and injury of the waters. Should this state of things continue?

The natural tendency of rivers flowing sluggishly through alluvial valleys is to silt up their beds and to flood the low and level lands on either side. There are several such districts now traversed by railways, where, occasionally, the locomotive fires are put out by the floods, and the lives of passengers are consequently endangered. These valleys and districts cannot be drained and improved by any single proprietor, nor even by the wealth and energy of a railway company. There are "proprietary rights" and "vested interests" which individuals dare not meddle with, and which even powerful companies shrink from touching. Can a Government, such as ours, reach the evil and provide a remedy? Parliament can, in many things, act despotically. Our rivers require some form of despotic power to work out necessary, beneficial, and economical improvements. We recommend the subject to the notice of our imperial Parliament for its immediate consideration.

side of Newgate-street, commencing at the corner of Gilt-spur-street, and terminating at and including No. 105, Newgate-street; and to widen King-street, commencing near its junction with Smithfield, and terminating at its junction with Snow-hill. Powers are also sought to charge the expenses of the works to be authorized upon the duty referred to in the 2nd section of the London Coal and Wine Duties Continuance Act, 1863, to authorize the Corporation to raise money on mortgage or annuity, and to apply for the above purposes any moneys under their control.

THE LATE MR. WILLIAM CUBITT, M.P.

Accident, not want of regard, has led us to delay recording in our pages some particulars of the life of the late Mr. William Cubitt, M.P. for Andover, and President of St. Bartholomew's Hospital. His lamented death took place, as we have already mentioned, on the 28th ult., at his residence, Penton Lodge, Andover.

Mr. W. Cubitt was the second son of Mr. Jonathan Cubitt, and was born at Buxton, near Norwich, in the month of April, 1791, and was consequently in his seventy-third year. Early in life, like his brother, Mr. Thomas Cubitt, he went to sea, but returning, joined the latter as a builder, and together they carried on a large business in the Gray's-inn-road. About the year 1825 this business was relinquished to the subject of our notice, who carried it on till the year 1844, when he took into partnership Mr. W. Dunnage and Mr. R. Alchin, and under the title Messrs. W. Cubitt & Co. executed many large works. In 1850, Mr. George Plucknett and Mr. Rogers joined the firm; and in 1858, Mr. Alchin having retired, Mr. Robinson became a partner. Mr. Cubitt had withdrawn from it in 1851, leaving only his name. The principal buildings erected by him before the formation of the firm, were Hanwell Lunatic Asylum, Covent Garden Market, about ten miles of the London and North Western Railway at Berkhampstead, and the extension line from Camden Town to Euston-square; various buildings for the company at Euston, Camden, and other stations on the line; new warehouses at the London Docks, and repairs to foundations and piers of old Westminster Bridge.

In conjunction with his partners, he built the new graving dock at Southampton; the terminus station, and other buildings at Euston-square; enlarged the Government Offices, Whitehall; and repaired Blackfriars Bridge.

To make the list more complete, we may add, as executed by the firm after Mr. Cubitt's retirement, the new dock and entrance at Shadwell, for the London Dock Company, and several new warehouses; alterations to the Royal Chapel, Buckingham Palace; enlargement of the National Gallery; the enlargement of the Stock Exchange; the new temperate house, Kew Gardens; and various works at the Bank of England, St. Paul's Cathedral, Royal Exchange, and so forth.

Mr. Cubitt, although he had retired from the firm, felt an attachment for his old place that never quitted him to the day of his death. When he left, the remaining partners had his portrait painted by Grant, and the leading foremen and others in the establishment subscribed together and caused it to be engraved by Mr. Atkinson, at a cost to them of 250*l.*

In 1847, Mr. Cubitt was elected Sheriff of London, his colleague being Mr. Charles Hill, F.S.A. During their year of office occurred the memorable 10th of April, when foreign statesmen gravely anticipated that England was about to undergo a revolution. The writer well remembers, and it was a circumstance to be noted, that both the sheriffs were dining, in the evening of that day, in the gayest of spirits, with the "Britton Club," of which they were members, with several others holding authority, John Britton himself at the head of the table. Whatever may have been thought of the matter abroad, there was no fear at home.

In 1851, Mr. Cubitt was elected alderman for the ward of Langbourne, on the death of Sir John Key. In 1860 he became Lord Mayor of London, in succession to Alderman Carter. The recorder,

on that occasion, told the Chief Baron truly that Mr. Cubitt had "conducted his business with singular intelligence and success; and, by his great consideration and kindness, had won from the thousands he employed their affection and esteem." At the banquet Lord Palmerston eulogized Mr. Cubitt as a "Hampshire neighbour," and Mr. Gladstone warmly praised him for his "character and capacity." For his liberality during his mayoralty of 1860-61, Mr. Cubitt was proposed as lord mayor for 1861-62. His re-election was contested, but was carried by 1,488 votes against Sir H. Muggeridge's 548. The two years of Mr. Cubitt's mayoralty are noteworthy for his liberality in general, and for the hospitality he showed to the foreign exhibitors and the members of the royal commissions who visited this country in 1862. He opened the subscriptions for the sufferers by the Hartley Colliery explosion and for the Lancashire operatives. He took a memorable part in originating the national memorial of the Prince Consort; and afterwards, with Lord Derby, Lord Clarendon, and Sir Charles Eastlake, had the honour to serve upon the committee nominated by the Queen to assist her in deciding on the form the monument should assume. Nearly the last words he spoke had reference to this memorial.

Mr. Cubitt was elected, as an alderman, governor of St. Bartholomew's Hospital. When he resigned his aldermanic gown he thought proper to resign his presidentship. A contest then arose between the "donation governors" and the "foundation governors," the latter being the aldermen, and the election ended in the return of Mr. Cubitt.

His connexion with Andover commenced in 1847, when he contested the borough with the late Mr. H. B. Coles, in opposition to Messrs. J. N. Fellowes & T. E. Smith, and was elected. In 1852 he was again returned, and this time headed the poll, but there could scarcely be said to be a contest, as the following figures will show:—W. Cubitt, 140; H. B. Coles, 121; J. Curling, 20. In 1857 he was again returned, but his colleague, Mr. Coles, was defeated by the Hon. D. F. Fortescue. In 1859 the poll showed W. Cubitt, 153; Hon. D. F. Fortescue, 120; W. J. Johnson, 114. In July, 1861, he resigned his seat for Andover, and allowed himself to be put in nomination for the City of London, being persuaded by his friends that there was a good prospect of carrying the election in the Conservative interest. In this he was unsuccessful, and his former seat was filled by his late colleague, Mr. H. B. Coles. In November, 1862, on the death of that gentleman, a requisition from his constituents induced Mr. Cubitt to allow himself to be again nominated for Andover, and he was returned without opposition, holding the seat up to the time of his death. In politics he was Conservative, but was favourable to free trade; and he voted for the abolition of church rates.

For some years Mr. Cubitt acted as chairman of the much-abused-by-the-foolish West London Railway Company, and aided in bringing the shareholders into smooth water. Besides the appointments we have mentioned, he was a magistrate for the counties of Middlesex, Surrey, and Hampshire, and in 1848 was appointed a deputy-lieutenant of the last-named county. He was also Prime Warden of the Fishmongers' Company, and in that capacity presided on several remarkable occasions.

In the mention that has been publicly made of his undertakings the embankment of the river Thames at the Isle of Dogs, measuring a mile and a quarter in extent, has not been sufficiently dwelt upon. The ground has been raised 10 feet, new roads have been formed, and a large town has been established, where important industries are being carried on. Here, too, he built a church. Mr. Cubitt, we may add, was chairman of the Royal Commission for the Thames Embankment, and did his utmost to have the embankment carried out.

He leaves four daughters: one of whom, Lady Olliffe, is the wife of the physician to the English Embassy in Paris, and two others are married to sons of the late Mr. Alderman Humphery. He had an only son of great promise, who died in early manhood while at the University of Cambridge. Mr. W. Humphery, we may add, was elected on the 19th inst. to supply the vacancy in the representation of Andover; Mr. Hawkshaw, the engineer, contesting it with him. The numbers were—Humphery, 130; Hawkshaw, 83.

Many of Mr. Cubitt's friends will hear with gratification that the Queen, through Sir Charles Phipps, has sent a very feeling letter of condolence, expressing her Majesty's regard for Mr. Cubitt's sterling character. A passage from the local *Advertiser* will serve to show the estimation in which he was held in the borough.

"His name," says the writer, "will descend to posterity in connexion with the enormous sums by which starvation was kept from the door of the hungry cotton-spinners, as well as in respect of the memorial to the late Prince Consort, in both of which movements Mr. Cubitt took a prominent part. What he was as a man and a Christian gentleman, no words of ours can adequately tell; but if any man living can say one word against him, let him stand forward: we know of none such. What he was as a friend and neighbour, let many, once friendless, but now prosperous and thriving through his means and personal influence, declare. What he was as a parent, relative, and adviser, those only know who are now mingling their tears for his loss with their thanks that it hath pleased Almighty God of His great mercy to take unto himself the soul of their dear brother departed. Of his intercourse with the world at large, it is enough to say, that in all things his conduct was that of William Cubitt, the country gentleman. Whether he had to do with the blue blood of the country, or with the ploughman who worked upon his farm, his demeanour was marked by that courtesy and urbanity which never for one moment left him. One of nature's gentlemen, although without a pedigree, he maintained throughout his long and chequered life all the attributes of those whose families date from the Conquest."

This estimation of him is not confined to Andover. Numerous resolutions from various parishes in Lancashire and Cheshire expressive of profound regret have been forwarded to the Mansion House Committee: and the Rev. F. H. Williams, of Ashton-under-Lyne, describes the manner in which the working men of Ashton testified their respect for his memory. He says:—"Without a suggestion from any one but themselves, they assembled in committees and resolved to ask a funeral sermon to be preached in Christ Church on Sunday, the 8th, to his memory; and, for themselves, that they should go to the church in a body, on the occasion, in funeral procession as mourners. Accordingly a deputation from their body—moved principally, I believe, by the overlookers of the town—asked me to preach the sermon. Their proposal, which, I confess, equally surprised and interested me, I of course instantly promised to comply with. It so happened that the sermon had to be fixed for the evening service; and so the men, having formed their procession at half-past five o'clock, walked up in long train, two abreast, of mourners dressed in as decent black as they could procure, and many of them carrying lighted torches, which gave a very novel and funereal effect to their ranks as they moved through the drizzling wet of a dark and boisterous evening. Nothing certainly could exceed the solemnity and propriety of the men's demeanour as they took their part heartily in the long service in an inconveniently crammed church, where many had to stand the whole time. Many who witnessed the deep feeling of the assemblage will not soon forget it."

A correspondent, writing from Manchester, says:—"I have been much interested in reading the encomiums which have been written on the good Lord Mayor,—especially in one letter, from Bradford,—showing a most grateful sense of his exertions for the Lancashire Fund. . . . . There have been several peals of muffled bells rung for him in Manchester, Bradford, and other places,—a touching tribute to his unselfish benevolence. May he hear, as the highest of all rewards, 'Well done, good and faithful servant,' from the lips of his Master in Heaven."

Amen, say we humbly.

AUCTIONS OF PICTURES IN ENGLAND.

Too little attention has been paid to the history of prices that pictures of reputation have brought, by appraisement at a fixed sum, by private sale, or by public auction. Still less attention has been given to the peerage, or genealogy, or Heralds' College descent of pictures of repute. As far as England is concerned (no narrow Bourse, or Mart, or Exchange in such matters), I purpose contributing from time to time, fixed data to supply a want long seriously felt among the many distinguished collectors and amateurs of art among us.

There were three great picture sales in England in the seventeenth century, between 1603, the accession of King James I., and 1688, the abdication of King James II. The three sales to which I refer were those of Villiers Duke of Buckingham, King Charles I., and Sir Peter Lely. Where Steenie's pictures were sold, and when, I shall tell some day in the columns of the *Builder*. The King's sale was conducted by appraisement and advances thereon. Lely's passed under the inevitable hammer of the Christie & Manson of that day.

The sale of the collection of Sir Peter Lely took place in 1681 (the year after his death), and lasted *forty* days. The "conditions of sale" specified "that immediately upon the sale of each picture the buyer should seal a contract for payment according to the custom in great sales." What the custom then was I am not aware; but two years later in London, in the same king's reign (Charles II.), and at the sale "by lottery" at Whitehall (October, 1683) of Prince Rupert's jewels, the king himself was present "to see all fair." The wording of the advertisement in the *London Gazette* is equally curious and suggestive:—

Advertisement.

"Prince Rupert's jewels are to be disposed of by Lottery at £3 apiece, the biggest prize to be a great pearl necklace, valued at £8,000*l.*, and none less than £100. To be drawn in His Majesty's presence; Who is pleased to declare that He Himself will see all the Prizes put in among the blanks, and that the whole shall be managed with all equity and fairness, nothing being intended but the sale of the jewels at a moderate value."

Remie, or Remigius, Van Limput, the painter, lived in Bedford-street, Covent Garden, and, dying in 1675, was buried (9th November) in the Church of St. Paul, Covent Garden. His collection of pictures was advertised for sale in the *London Gazette* of the year 1677. The advertisement is characteristic:—

Advertisement.

"If any person be desirous to see the Excellent Collection of Italian Pictures of the late deceased *Mr. Remy Van Lemput*, picture drawer, which the Heirs will expose to sale by the way of *Publick Outcry*, on the 14th of May next [1677], at three o'clock in the afternoon, it will be open to view on the tenth; and Mr. Berry, the Porter of Somerset House, will direct them to the place and persons concerned in the sale."

Sir Peter Lely's sale lasted forty days, and brought twenty-six thousand pounds of King Charles II.'s coin, or some fifty thousand pounds of the money of Queen Victoria. Betterton, the great actor, was a purchaser. He bought a Titian, a Giorgione, and a Sir Antonio More,—three different lots for fifty-seven pounds. Betterton's sale is advertised in No. 213 of the first edition of the *Tatler* for 1710; but a copy of Betterton's catalogue is unknown. One picture, and it is a good one, and a specimen of Betterton's good taste in art, is now at Northumberland House,—the fine triple portraits, on one canvas, by Dobson, of "Sir Charles Cotterell, Sir Balthazar Gerbier, and Dobson himself." The Betterton sale price was 44*l.*:—it would fetch 500 guineas now. Great English actors, I may be pardoned for observing, have been collectors. Cartwright, Betterton, Jack Banister, and Charles Mathews collected pictures; Garrick, John Henderson, and John Kemble collected books. William Cartwright, one of the original famous Two Kings of Brentford in "The Rehearsal," left his pictures and books to Alleyn's College, at Dulwich, where a few of them only (sad to say) are still to be seen.

The earliest catalogue in my collection (and it is a very extensive one, having been formed over many years and from many sales, &c.) is a quarto of four pages, thus entitled:—

"A

CATALOGUE

Of a small, but Choice

Collection of very Capital, Original *Italian* and *Flemish*

PICTURES, &c.

By sundry of the most Celebrated Masters of the first *Form*, both Ancient and Modern, Painted at *Rome, Florence, Venice, Bologna, Parma, Naples, Genoua, Antwerp, &c.*

Together with

Two Pieces of Rich *Chinese* Tapestry, and Four Lots of other very great and uncommon Curiosities.

Which will be Sold by *Auction*, on *Wednesday*, the 5th of *March*, 1729-9, at Mr. Hickford's great Rome in *Panton-street*, near the *Hay-market*.

Where the Pictures, &c. May be viewed on *Saturday*, the 1st of *March*, *Monday* the 3rd, *Tuesday* the 4th, and *Wednesday* the 5th, until the Hour of Sale, which will begin at Eleven a Clock in the Forenoon precisely.

Catalogues to be had at the Place of SALE, at Mr. *Monger's* the lower end of *Milk street*, *Cheap-side*, and at St. *James's Coffee House*.

In Nummo aurem, mensuræ, non numero accepit. Plin. de Pictur. Apell.

Printed by A. Campbell, in *King-street*, near St. *Margaret's* Church, *Westminster*."

*** Observe the *origin* of Latin mottos to Trafalgar-square catalogues.

And here (in parenthesis), and as only casually illustrative of my subject, I will mention that *Dr. Seaman's* sale in 1676 was the first book-

auction in London; and that *Samuel Patterson*, who flourished in the first half of the last century, was the first auctioneer who sold books singly in lots, the first bidding for which was *sixpence*.

The conditions of the sale of 1728 9 well merit reprinting. Here they are:—

"*Conditions of this* SALE.

I. He that bids *most*, is the *Buyer*: But if any Difference arise, that the Company cannot Decide, the Picture, or the Lot in Question, to be put up again.

II. All the *Pictures* are warranted *Originals*: The Battle Piece of *Borgognone*, and the Head of *Rosalba*, only excepted; because by some they have been thought Doubtful.

III. That all *Buyers* do give in their Names and Places of Abode, and five Shillings in the Pound in Part of what they Buy, *if Demanded*.

IV. And lastly, That all the Pictures, and other Lots or Numbers, be taken away and Paid for at the Place of Sale, on or before *Saturday* the 8th of *March* Instant.

N.B. *Any Person who cannot attend the* SALE, *may have his or her Commission faithfully Executed, by directing a Letter, or sending a Message by a known Hand to*

Their Humble Servant,

HENRY MONGER."

The conditions thus settled, then follows the catalogue of the lots, *forty-eight* in number,—and by no means a bad bill of fare,—one to send the Trustees of the National Gallery, headed by Sir Charles Eastlake; the Trustees of the British Museum, headed by Mr. Franks; and the whole body of the Society of Antiquaries, to "Mr. Hickford's Great Room at Panton-street, near the Haymarket."

Now, I look on this as a very interesting catalogue of a very interesting sale. Mr. E. M. Ward might make (with Mr. Fairholt's costume aid) a very pretty picture from it. Here, some few feet from the pulpit of Mr. Monger, are many of the Maids of Honour looking at the Pontormo, "Venus stealing a Dart out of Cupid's Quiver," knocked down at 450*l*., and to whom?—to the Mother of the Maids? No; to Queen Caroline herself!—all the "Maids" giggling and "tittering" at the purchase and purchaser, then turning over and admiring the tapestry "for a counterpane for a bed of state." There, on your left, is the great collector, Edward Harley, Earl of Oxford, with his friend, George Vertue, and the future Duchess of Portland (of Vase memory) close to him and looking on. There, too, on the right, and sitting in her chair, catalogue in hand, is the celebrated Lady Betty Germaine, a great collector and a liberal one, a woman who foresaw the Strawberry-hill Collection, and gave more than one historical memorial to the boy Horace, who in his old age, and as Earl of Orford, always spoke warmly of "dear Lady Betty."

This, then, was a sale of consequence—one that the elder Christie or George Robins would have liked to have sold, and one that the famous King-street auctioneers of 1863 would not decline. Here is a lot to create a fluttering of fans. Lot 42, "Venus stealing a Dart out of Cupid's Quiver," is now No. 458 of Queen "Caroline's bed-room, at Hampton Court." Neither Mrs. Jameson nor Mr. Jesse tells us this; and Felix Summerley (Mr. Henry Cole) is alike silent. This lot (No. 42) put up, as my MS. annotator says, at 450*l*., was *kept* (bought in) for Queen Caroline, in the name of the King (Augustus, or George II.) for 1,000*l*. The conception and drawing of the goddess are amazingly fine; but the face is unlovely, and the figure Amazonian.

One word more about this Pontormo "Venus," not to be found in Handbookers' pages or editorial notes. This was "the very pretty altarpiece" so unmistakably referred to by the Chaplain, who was unwilling, with Church preferment before him, to read the service of the Church before the first Queen Caroline and such a picture.

Touching lot 43 of Hickford's auction, the bassorelievos by Valerio Belli, called Valerio Vicentino, consult Walpole, in his "Anecdotes."* The lot (in every way remarkable) has equally escaped the noble author and his two editors. In what choice cabinet is this Vicentino now? Is it with one ignorant of its worth? Perhaps Mr. Albert Way (all accomplished in many arts) may have made a "note" of its "fashionable movements."

PETER CUNNINGHAM.

* Walpole's Works, iii. 138.

"ACOUSTIC POTTERY."

L'ABBÉ COCHET re-excites the attention of the English public, in the *Gentleman's Magazine* for this month, as to a curious subject, which will be found referred to in a leading article on "The Mystic Chaldea," in the *Builder* of 22nd August, 1857; and which same subject, in another and less ancient form, as some of our readers may recollect, was discussed in the *Builder* on another occasion, when some "acoustic pottery" was found at Fountains Abbey by Earl de Grey.

The chief purpose of L'Abbé Cochet is to bring under notice what he calls "an interesting archæological question [which] has lately been raised by M. Didron in his *Annales Archéologiques*. It relates [continues the Abbé] to the acoustic means employed in the Middle Ages, to repeat words or sounds in our religious edifices." This question has been introduced to France by a Swedish architect, M. Mandelgren, and by two Russian architects, Messrs. Stassoff & Gonestaeff, who are at present in Paris, engaged in the study of French architecture. These gentlemen state that in Sweden, Denmark, and Russia, there are "cornets and pots of baked earth placed either in the interior walls or in the vaults" of churches; and as Christianity was introduced into Scandinavia chiefly from France, they thought it probable that such pots or vases might be found in French churches also; perhaps, however, brought to the west with the Byzantine style of architecture itself. What we have to add to the information of M. Didron and L'Abbé Cochet, will tend to show the great probability of this last suggestion, and carry us still farther back, indeed, than Byzantine and Greek times altogether.

M. Didron, in the *Annales*, of which he is the editor, cites two facts to show the existence in France of acoustic pottery. Cornets of baked earth have been found in the walls of the church of St. Blaise of Arles, believed to have been built in 1280; and in the Chronicle of the Celestines of Metz, the Chronicler Messin, under date 1432, says;—

"In the month of August in this year, on the vigil of the Assumption, after Brother Odo Leroy had returned from the before-mentioned general chapter, it was ordered that pots should be made for the choir of the church of Ceans, he stating that he had seen such in another church, and thinking that they made the chanting resound more strongly. They were all put up in one day, as many workmen having been employed as were necessary."

Thus "the custom of acoustic pottery," as L'Abbé Cochet calls it, seems to have been adopted at two extreme points in France; and the Abbé adds a few more facts collected in the cradle of Christianity for Norway, namely, Normandy, during a thirty years' study of churches there, and especially in Upper Normandy, where he five or six times noticed the particularity in question. Thus in 1862 the workmen engaged in pulling down the old church of St. Laurent en Caux (canton of Doudeville) were surprised to meet with a large earthen vase, of which the form was as remarkable as the position. This vase, placed in one of the angles of the choir, was entirely enveloped in mortar, and its form was that of a cone closed at each end. It had no other opening but a beak, which appeared in the form of a cornet at the surface of the wall. The exterior of the vase was furrowed with horizontal grooves. The form of the vase, and the earth of which it was composed, led him to ascribe it to the thirteenth century. He had remarked the same peculiarities of fabrication on vases of this epoch found at Leure, in the tomb of Pierre Berenguer, in 1856. The second acoustic vase that he mentions came from the Abbey of Montivilliers, and is now preserved in the Library of that city. It was taken from the vault of the choir under the tower of that royal monastery, and he conceives it was placed there at the rebuilding of the house in 1648 by the ladies of L'Hospital, abbesses of that establishment. L'Abbé also noticed a dozen acoustic holes in the four angles of the clock-tower, of which the vault was ruined in the seventeenth century. A third vase which he has found is one of the sixteenth century, discovered in the choir of the church of Fry (canton of Argueil). During the reparations there in 1858, four of these vases were found, two of which were in the sacristy. They appear to be culinary vases. In 1852 he remarked, in the now destroyed church of Alvimare (canton of Fauville), circular holes in the prisms which surround the pillars of the choir and the clock-tower. These holes, he says, were nothing but the openings of earthen vases placed in the walls as agents of repercussion. In the church of Mont aux Maladæ, near Rouen, these vases fill the windows of the nave and the choir. They were found in 1842, when the Romanesque pilasters of the twelfth century were restored, but the acoustic operation, he thinks, belongs to the seventeenth. He had also observed these acoustic vases in the church of Contremoulins, near Fécamp, and in the ruins of the choir of Perruel, near Péciers sur Audelle (arrondissement of Andelys).

Germany, England, and France, L'Abbé has no doubt, will add to this gleaning from Normandy. "We would almost say," he adds, "that the theatres of antiquity have known these resources, and that Vitruvius himself has spoken of acoustic vases."

Now such vases as those described by L'Abbé Cochet, M. Didron, and the Swedish and Russian architects, have not only been found built into the walls of Greek rooms where choruses were sung; but, strange to say, among the ruins of sepulchral buildings in the cities of the dead discovered on the site of ancient Chaldea the very same peculiarity, of open vases, implanted, by thousands, in a wall, mouth outwards, but in this case on the outside of the wall, was found some years ago by Mr. W. K. Loftus;* and the subject is one of so remarkable a kind that we shall quote Mr. Loftus's account of his discovery in full:—

"Warka is a complete mine for extraordinary and unheard-of modes of decoration in architecture. Within a stone's throw of the south-west façade at Wuswas, is another mound crowned with a curious building, which has some points of resemblance to the cone-brick structure last described. It rises abruptly from the base of the artificial mound on which the Wuswas ruin stands, and appears to have been a tower of unbaked brick. My attention was particularly directed to it by the enormous quantity of broken pottery and conical ends of jars which lay around. On excavating midway up its north side, I came upon a kind of basement, or perhaps terrace, of mud-brick abutting against a mass of compact earth. Upon the latter was raised a wall composed entirely of unbaked bricks and a peculiar species of conical vase, the fragments of which lay strewed on the surface. This wall was traced about 100 feet, but was extremely irregular in plan, at one point projecting forward 4 feet, then rounding off and receding 8 feet. It afterwards resumed its original direction for 43 feet, then made an obtuse angle, and finally bore away as before, when I ceased to follow it further. Above the foundation were a few layers of mud-bricks, superimposed on which were three rows of these vases, arranged horizontally, mouths outwards, and immediately above each other. This order of brick and pot-work was repeated thrice, and was succeeded upwards by a mass of unbaked bricks. The vases vary in size from 10 inches to 15 inches in length, with a general diameter at the mouth of 4 inches. The cup or interior is only 6 inches deep, consequently the conical end is solid. The cup was formed by a regular turning apparatus. These vases, from their great thickness throughout, are capable of bearing very considerable pressure, although the greatest proportion of them was broken by the superincumbent mass of earth. With their circular mouths outwards they produced a very strange effect, more striking even than that of the painted cone edifice already described.

It is difficult to conceive the purpose for which these vases were designed. We know, however, that large inflated vases were sometimes built into the walls of the Greek rooms, for the purpose of making the choruses resound during their revels; but in this case the vases were within, not outside, a chamber, and had spacious instead of extremely narrow and shallow cups. The vases at Warka could not, therefore, have been applied to the same use. Excepting as another application of the cone for an ornamental design, it is difficult to conceive their utility; but it is not improbable that the same system of architectural embellishment may be traced in the tasteful designs of vases and pipe-tiles, which form such elegant open-work patterns in the terrace walls of Mosul and other Eastern towns on the tops of the houses, where the natives sleep during the hot nights of summer."

The solid cones, like the conical vases, were laid horizontally in the midst of cement of mud mixed with chopped straw, and with their circular bases facing outwards and their points inwards, just as the hollow cones or conical vases were. Mr. Loftus saw a wall at Warka, 30 feet long, entirely composed of these cones, and similar cones are found in many other ruins of undoubted Babylonian age, which, unlike Warka, have escaped being built upon by succeeding races. Mr. Taylor discovered them plentifully, both at Múgeyer and Abú Shehreyn, at which latter place they occurred 10 inches in length, composed of limestone and marble, and sometimes with a rim round the edge filled with copper. They were, undoubtedly, much used as an architectural decoration in Lower Chaldæa, and always in connexion with sepulchral remains. "Cones, or rather horns [cornets?] of baked clay," according to Mr. Loftus, "frequently occur on the same ruins, inscribed round the thick part of the circumference in early and complicated cuneiform characters. They, however, appear to have been attached to some other object, and are usually bent at the summit of the cone. One of these, obtained by me at Warka, bears on it the name of Bel or Belus. It is engraved in Mr. Layard's 'Nineveh and Babylon,' p. 564, and is now in the British Museum."

These cones remind one not only of the cones in the hands of Egyptian and Assyrian priests, but of those used by the Buddhists, apparently as a sort of fetish objects on which to fix the eye in that "contemplation" which forms so distinguished a religious duty in Thibet, China, and India. Built in thousands into a wall, however, one cannot imagine them to have had any such purpose; and neither could the hollow cones outside the wall have had

* Travels and Researches in Chaldæa and Susiana. London: Nisbet: p. 190.

anything like an acoustical object in view, although in the less ancient use of such hollow cones or vases in churches, and even in Greek rooms, such a purpose may have been intended. Can it be that the Chaldæan cones, solid and hollow, were fetishes, such as we have indicated, and were built into the walls of the sepulchral temples of the cities of the dead at the deaths of the possessors? If so, this might account for the irregularities of the wall; and as for subsequent practices of a like order, may they not have merely been traditional and without special purpose, at least till the idea was appropriated to acoustical uses, real or imaginary? At all events, the original practice in Chaldæa could not, one would think, have had anything to do with acoustics.

ON THE CONSTRUCTION OF DWELLINGS FOR THE POOR.*

ALTHOUGH the subject of the few remarks which I have the honour to submit to you this evening is full of interest to all who are either directly or indirectly engaged in the improvement of the domestic condition of the poor, and might still in skilful hands be treated with novelty, I fear that it has been so frequently discussed at *séances, conversazioni*, and public meetings of all kinds, and has received so much attention from the editor of the *Builder*, whose valuable journal is in everybody's hands, as to render the hope of obtaining much additional information or entertainment from the little which I have to say exceedingly small. If you will allow me the quarter of an hour allotted by the patron to his vicar for the duration of his Sunday morning's sermon, I think it will be sufficient; and I shall try to tell the little I have to tell within that time. I cannot but feel that some apology is necessary for venturing to dignify by the name of "paper" the following brief record of my experience; but I have done so with the hope that, under this title, it will incite a discussion which will elicit suggestions of more real value than it can offer itself.

I believe that it is usual, in entering upon a description of any style or peculiarity of building, to date from the time of the Israelitish captivity, and to give a history of the first brick.

May I beg that one exception to this established precedent be made in my favour; and, as I really know nothing of this great ancestor of a most numerous progeny, how he was made or what became of him, may I be allowed to tell the little I have got to tell without further allusion to him or to any of his relations not intimately connected with our present subject?

There are two distinct classes of dwellings for the poor which deserve our consideration, viz.—urban or town dwellings, and suburban dwellings or cottages.

Although the leading features of construction and detailed arrangement are the same in both, perhaps it may be well to describe first those which I consider are peculiarly applicable to town dwellings intended for working men, whose wages range from 12s. to 24s. per week. Hitherto workmen of this class have been strangers not only to the comforts and conveniences which render home attractive, but to the barest accommodation necessary to render social life tolerably decent; and, although it may appear a strange assertion to make, it is nevertheless true, that the nearer an improved dwelling approaches its miserable predecessor in general aspect and character, the more popular it will be.

The difficulty, therefore, in designing new homes for the poor consists in the introduction of improvements which shall lead to the gradual abandonment of injurious habits, and give no sudden offence to jealously cherished prejudices. To do this effectively it is desirable to ascertain, as accurately as possible, the leading requirements and peculiarities of the inhabitants of the district in which it is proposed to build.

If a labouring man be taken from one low small room in which he has been accustomed to live with his wife and four or five small children, and be placed in a dwelling which he cannot afford to furnish or keep clean, and where he is not comfortable and at ease, he will consider himself badly treated, and wish that he had been left alone.

No symmetrical or beautiful building will ever compensate him for the loss of a cabin which was convenient to him, and where he felt himself at home.

I consider that a poor man's town dwelling should consist of a living-room and bed-room, with provision for additional bed-rooms when required;—that it should possess a plentiful and accessible supply of water both for ablution and cooking; a W.C., sink, and lavatory distinct, but not far removed from his tenement; a washhouse, with the means of drying clothes in any weather without artificial heat; and, lastly, when practicable, a play-ground for his children.

In my opinion the living-room should be 12 feet by 10 feet in the clear, *i.e.*, that this area of 120 square feet should not be obstructed by fireplaces, cupboards, or other similar projections; that its walls should be square, by which I mean that there should not be more than four angles or corners on its ground-plan.

Rooms of a regular shape are more easily kept clean, are less expensive to furnish, especially when carpet or other covering is required for the floor; and, what is of no little importance, much more capable of being made comfortable, than rooms with a varied outline.

The entrance-door should open into a porch or vestibule, and be placed at one end of the wall, opposite to the window; so that when both are open, the air in the dwelling may be effectively changed.

The window should be situate in the centre of its own wall, and sufficiently large to light every part of the room. It should be a sash window, to insure top and bottom ventilation; and its cill should not be more than 2 feet 9 inches from the floor, otherwise high furniture may be placed beneath, and the difficulty of reaching it will cause it to be seldom opened. If it be glazed with tolerably large panes of glass, the probability is that there will be fewer breakages than if the panes were small.

The fire-place should also be, if possible, in the centre of its own wall, and be furnished with a range containing boiler, with a cock of the best description fixed 2 inches above the bottom; an oven, and cooking-place at least 10 inches wide from side to side, with sliding bars, flap, and catch, all of which ought to be of wrought iron.

The living-room should be further provided with a good serviceable closet, containing shelves for cooking utensils and crockery, clothes-pins, and a large covered box for coal. It should be the entire height of the room, having its front flush with the chimney-breast; and it should be lighted by a small casement window hung upon centres, and easily opened. The bedrooms should be 12 feet by 8 feet, and like the living-rooms, at least 8 feet high. They should communicate with the latter by a door in the wall opposite to the fireplace at the end nearest to the window, so that sufficient wall-space may be secured for the bed. As the bedrooms are supplied with warmth from the living-room, fireplaces are not much required; and although they are valuable additions, I do not consider their introduction necessary where space is limited or where expense is of much importance.

It is very desirable that the walls of the dwelling should have neither plaster nor paper. If they are well built with sound stock bricks, and coloured with two coats of well-sized distemper-colour of a warm and cheerful tint, they present a good and comfortable-looking surface; they offer no harbour for vermin; they are uninjured when picture-nails are driven into them; and their freshness and colour are easily renewed at a trifling expense. These cannot be regarded as unimportant advantages by those who recollect that it is almost impossible for the working man to avoid bringing creepers into his home; that he will surround himself with pictures whenever he has an opportunity; and that he very much objects to taking a dwelling whose walls are covered with the half-dirty paper of a previous occupant. If vermin succeed in hiding themselves in plaster they increase and multiply so quickly that their banishment becomes almost impossible. If nails are driven into papered walls and afterwards carelessly removed, they tear the paper and leave holes which, besides being unsightly, offer the most convenient nests to the creeping things we have alluded to. The workman's pictures are not often satisfied with one nail,—they require half a dozen at least to keep them straight. I consider the average number of nails for a picture to be ten, and the average number of pictures (large and small) to be ten: a little calculation will soon show how many holes may be left in paper plaster when these ten pictures are removed to adorn another habitation.

The working man is a nomad, as much so as the Arab of the desert. The nature of his employment compels him to wander from place to place like an unquiet spirit. He cannot, therefore, be regarded, under any circumstances, as a permanent tenant; and, as the improvement of his habits and tastes is one of the objects most desired by those who undertake to improve his home, it is of importance that, when he first takes possession of it, he should find it clean, and fit for immediate use. Now, if dirty walls are to be re-papered every time a new tenant objects to their appearance, it is evident that much time and money must be most profitlessly consumed; whereas, if the walls are merely coloured, a couple of hours and a pailful of colour suffice to restore them to their original freshness.

I have dwelt, perhaps, tediously upon the surface covering of the walls, because, without having seen them, persons suppose that what they term "bare walls" must present a prisonlike and comfortless aspect. A visit to some of the dwellings in London would, I think, remove this impression, for it would prove that a look of cheeriness and comfort could be obtained, even in those tenements where the walls were uncovered by engravings and coloured prints.

After having entered into so strong a protest against plaster, perhaps it may appear inconsistent to recommend it as the most suitable material for the ceiling. I do this, however, for two reasons: first, because it has a finished and clean appearance, and, being almost out of reach, its liabilities to injury are few; and, secondly, because it is a preventive against the spread of fire. The construction of fireproof ceilings is often unsightly, without being effective, and requires a concealment, which increases its expense.

I forget who has called man a "destructive animal," but I think there can be no doubt that children are destructive little animals. A hatchet or a hammer is a valuable instrument for evil in their hands, and their contentment is perfect when anything to be hacked or hammered is placed within their reach. All that I have hitherto specified as desirable additions to a workman's dwelling have been of a tolerably solid description, but I have said nothing of the floor. Wood is certainly not very hard: it is inviting for nails; is apt to get dirty, and tolerably difficult to clean; and yet, in my opinion, a wood floor is the best that can be constructed for our purpose. If it be not very hard, it is not very rigid, and its elasticity enables it to bear heavy and sudden blows without injury. If firewood or coal are broken upon any other floor than a wooden one, the concussion is much more injurious. If nails are driven into the joints, or the boards themselves, they are easily extracted, and leave no marks behind them; and if an extra amount of scrubbing be necessary to keep them clean, no one will deny that visible cleanliness is better than hidden dirt. Tile and asphalte floors have often been recommended as the best; but, though the former have a clean appearance, they are cold to the feet when uncovered by a carpet; they are more liable to injury than floor-boards; and they are more troublesome to repair and replace when defective. Asphalte and cement floors have, I consider, in addition to these disadvantages, another which ought not to be overlooked. Their efficiency, in great measure, depends upon a rigid foundation, consisting either of brick arches, or concrete supported by iron joists. I have already said that this kind of construction is expensive. The insurance offices object to it on other grounds. They consider that it is not fireproof. In case of fire, after the iron becomes heated and exposed to the action of water, fracture ensues, and ruin speedily follows; whereas, a substantial wood floor, with plaster ceiling, will, in small tenements like those I am describing, resist the spread of fire for a considerable time. Having attempted thus far to describe what I believe every working man would acknowledge to be contributive to his comfort and convenience, I will say one word upon an item affecting his domestic economy, in favour of which his approbation is much less certain. I allude to ventilation.

If there is anything in the world that a poor man hates, or a poor man's children are educated to hate, with cordial, sincere, and unquenchable hatred, it is fresh air. No preaching, reasoning, expostulation, or cajolement will induce him to breathe freely among his own penates, if he can help it. So successful is he in excluding every breath of air from his dwelling, that his very fire remonstrates, and smokes vigorously. If its cloudy signs be disregarded, which they invariably are, of course, after a time, it collapses and expires. Its death, however, offers no warning: windows and doors remain closed, and to be stifled without a fire is preferable to easy respiration with one. No one will deny that dwellings must be ventilated, but few will be able to say how it is to

a

* By Mr. H. A. Darbishire. Read at meeting of the Architectural Association, on the 13th inst. Report of the discussion which followed will be given in our next.

be done. Beyond supplying doors that do not fit too close, windows that will open at the top and bottom, and fireplaces with air-channels underneath the floor, it is extremely difficult to know how to proceed further without detection. A ventilator, once discovered, instantly becomes useless. It is pasted over, if small; and if large, is made the receptacle of every cast-off garment, from a bonnet to an old shoe. The most successful ventilators that I have tried are some perforated bricks, so adapted that they will admit the external air without causing a draught. I have introduced them throughout the length of the wall in which the windows are placed, and in that opposite to it; and the air is so diffused by its passage through the narrow channels with which the bricks are provided, that the paste-brush is seldom considered necessary to oppose its entrance. I think that you will admit this to be a point of no little consequence in their favour. Still I am obliged, in a great degree, to trust to doors, windows, and fireplaces, and endeavour, by their arrangement, and accessibility to fresh-air currents, to tempt the boon which the workman despises.

I cannot leave the subject of ventilation without adverting to one intimately connected with it. I mean drainage. I consider that, after the foundations, no portion of a building deserves more careful attention than its drains.

In dwellings provided for persons who are not remarkable for the care they bestow upon the property of others, it is especially desirable that the drain-pipes should be of the best description, and that their diameters should be larger than those employed under ordinary circumstances, because their liabilities to obstruction are very much greater. Boots, brushes, bones, pieces of furniture, and even old clothes, are not unfrequently found in the drains of poor neighbourhoods. That these and similarly unwelcome intruders may be easily removed, it is desirable that the main drains should be external to the building; that they should be supplied with examination holes at certain intervals for the purposes of repair and cleansing; and that they should possess the means of being regularly flushed with water. None but the inferior drains should be laid within the building, and these should take the shortest possible course to the main drains. In all situations where the site of the building is spongy or soft, or consists of made ground, the drains, both large and small, should be laid upon beds of concrete, in order that their proper falls may be preserved; for upon this the efficient drainage of a building mainly depends. Soil and other pipes connected with the drains should be ventilated, as far as practicable, by being taken above the roof, and no precaution whatever should be omitted to ensure the healthfulness and purity of the building.

In addition to the living-room and bed-room and their requirements, which have taken up so much time in this description, I consider that to every poor man's town dwelling a lavatory should be attached: this should contain a W.C., fitted with Lambert's strong galvanized iron valves; a lead trough, supplied with one of Chrimes's high-pressure loose valve cocks, and furnished with an enamelled iron basin for ablution; and a smaller lead trough or waste for the discharge of dirty water, with an inch service cock above it for the supply of pails and kettles. The walls of the lavatory should be finished and coloured as those of the dwelling; but to the height of 18 inches above each trough they should be painted with four good coats of oil colour, that they may be frequently and easily washed. The floor should be tiled with thick 9 inch square tiles, which bear a good deal of wear and tear, and slopping in one spot without injury. The lavatory should be lighted by two windows at least, one in the external wall of the W.C., and one at the furthest end of the wall, at right angles to it. The door should be at one end of the wall, opposite to that which contains the closet window, so that there may be no possibility of stagnant air remaining in the place.

Botanists tell us that roses and other beautiful flowers are partial to soap-suds; but I know of no class of naturalists that has alluded to their powers of attraction for the workman's wife. It is not probable that if there be no tub and water her sighs after the suds will be either frequent or deep; but give her these, and a small copper in addition, and her latent love and powers to scrub rise up like Astarte's ghost. Every bit of rag she can find must be washed;—not half washed, but washed in every stage of washing—soaped, rinsed, and boiled over and over again, until there is more wash left than rag. To attach a laundry, then, to the dwellings of those born with this affection is a positive duty; and it is well to consider how it may be gratified in the most efficient and practical manner.

In my opinion, it is important that the accommodation should be as simple as possible; that the supply of water should be near at hand; and that all artificial means of drying, excepting, of course, clothes-wringers, should be avoided. The furniture should consist of a washing-tub and rinsing-tub, about 3 feet 3 inches long by 1 foot 9 inches wide, with washer, plug, and chain, and a separate cold-water service to each. The top of the tubs should be 3 feet 6 inches above the floor if foot-boards are provided, and 3 inches less if there be no foot-boards. There should be a 10-gallon copper provided, with a cold-water service and a tin ladle. Especial care should be observed in the construction and arrangement of the flue, to insure the heat being well distributed over the sides and bottom of the copper, and to afford facilities for regulating the heat and cleaning. Child's American wringers should be provided when hydrometers are not used. They are easily attached to the tubs, are effective and simple in their action, and can be procured at a moderate price.

It is desirable that the cistern or source from which the water-supply is obtained should be as close to the laundry as possible, in order that the piping may be short, require few joints and bends, and be free from the risks which attend a variety of levels. Perhaps I ought to observe that in all matters relating to water-supply, more attention should be paid to the dimensions of the iron piping and the nature and position of the services than they usually receive. For instance, means should be provided for filling, emptying, and cleaning the cistern, tank, or whatever the main supply may be, at any moment; also for regulating the supply in such a manner that when any portion of the piping is under repair, the water may be partially or entirely excluded from it. Every rising main should be furnished with at least two cocks; and, where the building is peculiarly liable to fire, there should be an additional cock 2 feet above each floor-level, for the supply of buckets, and for the connexion of hose. The first cock should be fixed in the junction between the rising main and the company's street main, so as to regulate the entire supply of the building. The second should be fixed at the bottom of the rising main, so as to release the water which remains in the pipe after the cistern is full, otherwise the main will be liable to injury from frost, especially in exposed situations.

The artificial means of drying clothes, which are adopted with advantage in the public wash-houses, are to be avoided in small laundries, because they require fuel, machinery, and supervision, which cannot be supplied and maintained without considerable expense, and which do not secure advantages at all commensurate with the attendant risk and cost. As far as my experience teaches, I find that clothes are easily and effectively dried, if they are protected from rain, and suspended in strong cross currents of air, and that wherever spaces suitable for this purpose can be obtained, other expedients are not required.

The last item on my list of contributions to the comfort of a workman's town dwelling, is a playground for his children. A few square yards are of inestimable value where house-room is limited: their value, however, increases their scarcity; and in London, the miserable little space which the Act requires to be in the rear of each dwelling, is all that the landlord can afford to allow to his overcharged and over-crowded tenants.

I consider that a great portion of the success which has attended the erection of large blocks of dwellings for the poor in towns, and especially in London, is attributable to the playgrounds which are placed at the disposal of the inmates. One large playground to one large building is of much greater use than many small yards to as many cottages.

The consideration of this subject has brought me to a point where my description of details may terminate with advantage in favour of one relating to buildings designed to contain several dwellings; and of these I shall say a few words before I conclude.

The site for a block of associated dwellings should be as open and in a situation as public as possible, not only to receive the advantages of light and ventilation, but because it is desirable that it should be easily accessible and easily found, and that the residents may have frequent opportunity of contact with neighbours whose habits and appearance are superior to their own. The ends of the site should face north and south, so that its east and west sides may have the morning and evening sun. It should offer every facility for good drainage, and it should not be near an exhausted gravel-pit, which has been filled up with dead or decaying animal and vegetable refuse. If the site has been long unoccupied by buildings, the nature of its subsoil should be well ascertained, as it not unfrequently happens in neighbourhoods where new dwellings are most required, and where scavengers and sanitary commissioners are rarely seen, that vacant plots of ground are regarded by the inhabitants as special provisions for their convenience, and are appropriated accordingly as economical dustholes, that require no cleaning. Owing to the increasing value of land in towns, large building sites are not to be obtained, except at considerable cost: it is necessary, therefore, to ascertain what area and shapes are most desirable, and to distribute every foot of space to the best advantage.

The most economical dimensions for a site, within the jurisdiction of the Metropolitan Board of Works, are 108 feet by 60 feet, as they will accommodate a building 108 feet long by 34 feet wide, and admit of a play-ground 26 feet deep in its rear. The multiple of 108 by 34 (3,600 in round numbers) is the area allowed by the arbitrary Act by which we are governed to a building containing several distinct tenements, and possessing only one entrance and staircase. It is, therefore, of consequence, that its distribution into tenements, lavatories, laundries, bath-rooms, staircases, and passages, should be such as to secure the greatest convenience and comfort with the least possible loss. To do this effectually, it is requisite that the building should be of a certain height, which, I consider, should not exceed 46 feet from the ground-line to the eaves of the roof. This dimension admits as many stories of dwellings as can be occupied with comfort to the tenants, and it requires no unnecessary thickness of walls. If it be expedient, as I have already suggested, to consult the wishes of one resident living alone, it certainly becomes much more so to comply, as far as possible, with those of several residents when congregated under the same roof. And very high buildings offer obstacles to the accomplishment of this very desirable end, too serious to be disregarded. To avoid all envyings and grumblings, the plan should be arranged so as to distribute the advantages of residence in tolerably equal proportions to all; and, therefore, the subdivision of the allotted superficies of 3,600 feet, and the prescribed height of 46 feet, which I propose, is as follows: whether it be the best, will, I hope, be decided by and by.

Dwellings whose floor level is below the general ground-line are objectionable as residences; and, as they are certainly not popular, I provide no accommodation in the basement, but a small cellar, to which reference will be made hereafter.

The ground, first, second, and third floor plans are divided, throughout their entire length, into two equal portions by a corridor, 4 feet 2 inches wide, each side of which is occupied by dwellings of the dimensions and possessing the accommodation already described. In the centre of one side of the corridor, on the ground-plan, is the principal entrance, and immediately opposite to it on the other side is the staircase. By giving these a central position, equal facilities of access are afforded to every part of the building. The entrance is 5 feet 6 inches wide, and is furnished with external and internal folding doors, under the immediate supervision of the porter, whose office it adjoins.

The staircase is 8 feet wide, with solid square stone steps, having a 10-inch tread, and an average rise of 7 inches. It is partially inclosed, *i.e.*, the side furthest from the corridor contains an arch 7 feet wide, and extending from the ground line to within a few feet of the eaves of the roof. It is separated from the corridor by two arches, whose centre pier contains a dust-shaft, traversing the entire height of the building. It is 14 inches span within, open above the roof for ventilation, is furnished with a hopper at each floor level, and communicates with a dust cellar in the basement, to which reference has already been made, and which is approached by a small external staircase underneath the first landing of the principal staircase, but distinct from it, so that the dust may be removed without causing annoyance to the tenants.

In all the plans I have mentioned the lavatories adjoin the staircase: those for men's use are on one side, those for the women on the other. This position is central, and will be found to possess other advantages of importance.

The arrangement of the fourth or topmost floor differs from those below it, inasmuch as it contains no dwellings, and is a source of no pecuniary profit. It has the following accommodation,

viz.—A laundry *circ.* 22 feet long by 12 feet wide, open to the roof, furnished with No. 8 sets of wash-tubs, separated by slate partitions; No. 8 10-gallon coppers; No. 8 Child's clothes-wringers, or one of Alliott's patent hydrometers; trellis-framed standing boards; stools for clothes-baskets, soap-boxes, and ladles. Of this furniture there is nothing to remark except that the slate partitions are supplied to ensure a privacy to the washer, which is very desirable; the ragged condition of the clothes, which some of the poor women bring to be washed, being such as would excite remark and ridicule were they not concealed from general observation. Low stools are supplied for the clothes-baskets in preference to tables, because they are more convenient, as being easily removed by the washers themselves.

In addition to the laundry, this floor contains a man's and a woman's bath-room, situate on each side of the staircase and immediately above the lavatories. Each is furnished with one of Rufford & Finch's baths, and a service of cold water. As they are near the laundry, hot water can be supplied without difficulty or delay, when it is required.

A cistern adjoins each bath-room, lined with lead, and supplying the range of lavatories below it. This position secures a direct fall to the several services, and avoids the necessity for frequent bends and joints, which are liable to get out of order.

The remaining portion of this story is unobstructed except by chimneys, and the standards which help to support the tie-beams of the roof, and which serve as clothes-posts for the washers. It is lighted by a range of small casements, capable of admitting air sufficient to remove any vapours or unpleasantness that might arise from the laundry, and to thoroughly dry all the clothes in the building.

The drainage is simple, and barely deserves notice. The main drains are external to the building, and are 12 inches or 9 inches in diameter. The smaller drains are as short as possible, and are 6 inches or 4 inches in diameter, according to their requirements.

The ventilation, afforded by the plan I have described, is in my opinion one of its principal recommendations. It is secured by the wide corridor, which divides the building, and which serves as a reservoir for the supply of air to the dwellings, whenever the entrance doors are opened. A window at each end of it, and the open staircase in its centre, do not fail to establish ever-changing currents, which forbid stagnation and remove impurities; and, notwithstanding all the tenant's opposition, his old hats, boots, paste and brown paper united, cannot entirely exclude the benefits which lie for admittance at his door. To forestall the inquiry as to the number of families which can be accommodated in a building covering 3,600 superficial feet, and five stories high, I may mention that the number of dwellings will be from forty to forty-five; the number of latrines, sixteen, or rather less than one-half to each dwelling; eight lavatories, or about a fifth to each dwelling; and the same number and proportion of washtubs and coppers. The baths may appear few, but their number is found to be sufficient.

I have now told the little I had to tell of my experiences relating to town dwellings. With a few words about cottages, I shall conclude what I fear you will consider a talk about trifles.

The internal accommodation which I have found to be most suitable for small cottages in the country, consists of living-room about 12 feet square, with a small scullery and closet attached, and a washhouse, about 10 feet by 9 feet, on the ground-floor, and three bedrooms and a closet on the floor above. Outside the cottage a yard should be provided to contain the ashpit and privy, and a place for coals.

Although land in the country is less valuable than in towns, the plan of the cottage should not be straggling, or render a variety of roof lines necessary; and although its arrangement should be compact, it should not be cramped. Ingenuity may be shown in fitting one portion into another, but it should not be carried too far, as sometimes happens. I have seen instances where the spaces have been so intermixed and of such extraordinary shapes, that the ground-plan resembled a Chinese puzzle more than anything else. Shapeless nooks and corners do not become convenient cupboards and closets because they are inclosed and possess a door, but rather most inconvenient hiding-places for mice and dirt, which render the place unwholesome and a nuisance.

The temptation to build picturesquely, and to try experiments with new materials and methods of construction, is much greater in the country than in town. Projections and angles look better on plan than plain straight lines, coloured bricks, bands of ornamental tiles, glazed patera, and other similar attractions, may give variety to elevations, but they must be adopted with considerable caution in small buildings. Too many projections make a small building look smaller by depriving it of breadth; and too great a diversity of colour give it a gingerbread and vulgar appearance, and frequently destroy the effect of really good proportions. New inventions and pseudo-economical devices prove too often miserable and expensive delusions.

The details of construction, &c., which I have given while speaking of town dwellings, are equally applicable to those in the country, and I hope that I may be excused from reverting to them, and be allowed to close by quoting for the benefit of all who are about to build cottages for the poor, some words of advice addressed to me in earlier days by the late excellent Professor Cockerell, whose memory will be ever dear to those who had the privilege of knowing him:—"Do not allow novelty to tempt you into experiment, but defer its adoption until it has received the approval of the more experienced."

THE CONSTRUCTION AND ARRANGEMENT OF MILLS.*

Few men—and those few are fast dying off—have enjoyed such varied opportunities for achievement in engineering matters as Dr. Fairbairn. For more than half a century at the head of a well-known firm in Manchester, the metropolis of mechanical engineering, — an engineer with a career almost coeval with the rise of engineering itself,—one of the most noted experimenters of the day,—a manufacturer from whose workshops the most varied descriptions of engineering work have been turned out,—a man honoured with the highest scientific dignities of Europe;—it is with great expectations that one opens a book by such an author. We are sorry to say that a practical engineer, after carefully reading this work, will find his expectations scarcely fulfilled. We have closed the book, not with the regret that its perusal is no longer a pleasure to come, but rather that Dr. Fairbairn should have put his name to a work that only incompletely answers to its voluminous title; to a work of an extremely superficial, and, in many respects, of a somewhat useless character. By what class of readers does Dr. Fairbairn intend this book to be read? Not deep enough for the practised engineer, its matter is insufficient for the engineering student. The work is, in fact, a book of all trades and a treatise on none.

Let us take, for instance, "The Architecture of Mills," *titularly* one of the most prominent subjects of the book. Now, the building of mills and factories, both from a utilitarian and æsthetic point of view, is one of the most interesting, and one of the as yet unexhausted subjects of the day. There is no doubt, that for almost every special manufacture a distinct arrangement of building ought to be adopted; that the building itself ought to be looked upon as a huge machine of brick and stone, intended to work in harmony with the other machines and their attendants, while sheltering them from the sun and rain. One of the main principles in factory construction is that whereby the materials to be manufactured never require to move backwards. The work should not be carried twice over the same space, but should move forward from its entry as a raw material at one end of the premises, to its exit as manufacturers' produce at the other. Another important principle consists in a careful arrangement for extending the works without any difficulty or patching. Almost all manufactories in this country, whether starting on a small or a large capital, may look forward, if well managed, to being extended. We have seen a fortune wasted in building expenses from no previous provision being made for extension. Then comes the principle of central observation, the importance of which was so fully enlarged upon by the late Sir Samuel Bentham.

It requires but a slight acquaintance with workmen to understand that easy means of supervision are always required. If the operative works by "piecework," the work itself has to be looked after; if by "day-work," the men themselves and the apprentices require the eye of the master. The easy conveyance of the materials and operatives,—the same in a factory as the circulation of the blood in an animal,—is another important point, of more or less importance according to the weight of the work itself, and of the number of operations the raw materials have to undergo before they assume their ultimate shape. The lighting of the building, its ventilation, and the means for making it fireproof, are evidently additional things of varying importance to be taken into consideration, as with other buildings. For many manufactures the lighting has to be of a special character. The locality of the factory with respect to water-power, fuel, labour, as also railway and canal communications, would be other matters to be taken into consideration. Land is now so expensive, even in provincial manufacturing towns,—a well-known firm in the north is said to be paying 2s. 6d. per annum per square yard,—that probably no manufactory can be so well established as in the outskirts of a town, and close to a line of railway. Will it be believed that Mr. Fairbairn only meagrely notices one or two of these principles in his "Treatise on Ancient and Modern Mills?" In a large establishment, a princely income may be won or lost accordingly as these points are considered or not in the laying out of the buildings. A well-planned factory represents an annual income to the manufacturers. Most of these requirements will be attained with greater facility if everything be placed upon the ground-floor. Merely with regard to the loss of muscular power in men by ascending and descending a staircase, the "shed" or ground-floor system is of great advantage. According to Sir George Cayley, a man when running up stairs for a few seconds exerts a power of two horses — twelve times the power he can exert with permanent effect. Many manufacturers in the north use "hoists," or platforms rising from floor to floor, with the men and materials. This plan, however, only partially obviates one objection to a factory built with several stories. Into the æsthetic point of view of factory building Mr. Fairbairn does not enter. He merely states that, twenty-five years ago, he formed the corners of a factory-building into pilasters, and made a "slight cornice round the building." We would venture to say that, in these days of specialities, an architect who would devote himself to factory buildings as a speciality, might meet with a lucrative practice. It is from a disregard of these principles that so many factories—absurdly constructed from a utilitarian, and hideous from an æsthetic point of view—are an annual loss of income to the proprietors, and an eternal eye-sore to the looker-on. We have examined many buildings of this kind, both in England and on the Continent, but the best example, in every way, of an engineering factory we have yet met with is that of Messrs. Beyer, Peacock, & Co., near Manchester. A branch from the Manchester, Sheffield, and Lincolnshire railway runs right into the yard of the works: there is a perfect communication between all the workshops by means of tram-lines: all the shops are on the ground-floor, and are lighted from the roof: the foremen can see from their offices the whole extent of their respective departments; and Mr. Beyer has adopted such a perfect arrangement for extension, that his works have been actually more than trebled in extent without pulling down a brick. With the exception of a few tall chimneys, of a somewhat questionable outline, there is nothing in the whole range of these magnificent buildings but what would please a fastidious architect. Of what use to an engineer or mill architect are the popular descriptions of cotton, flax, silk, and other mills, forming the principal part of this book? The irrepressible, but intelligent penny-a-liner has long ago furnished the daily papers with descriptions of this kind. Again, a man of such experience as Dr. Fairbairn should not have to quote so continually from a familiar authority like Dr. Ure. Several pages, printed, by the way, in the same type as the body of the book, are quoted from the late venerable doctor, and two chapters, at least, begin with "Dr. Ure says." In the account of cotton mills, Dr. Fairbairn quite ignores Mr. Richard Roberts, that universally known veteran engineer, who, when scheming the spinning-mill, had to be escorted to his works by a troop of cavalry, in order to protect him from the vengeance of the infuriated hand-spinners.

Even the mechanical engineering portion, properly so called, of the book, is in many respects

* "Treatise on Mills and Millwork." Part II. On Machinery of Transmission, and the Arrangement of Mills. Comprising Treatises on Wheels, Shafts, and Couplings; Engaging and Disengaging Gear; and Mill Architecture; and on Corn, Cotton, Flax, Silk, and Woollen Mills: to which is added a Description of Oil, Paper, and Powder Mills; including a short account of the Manufacture of Iron. By William Fairbairn, Esq., C.E., LL.D., F.R.S., F.G.S.; Corresponding Member of the National Institute of France, and of the Royal Academy of Turin; Chevalier of the Legion of Honour, &c. Longmans. 1863.

deficient. In his account of friction, Mr. Fairbairn might well have alluded to the recent remarkable experiments in France, that seem to almost entirely reverse our received ideas of friction. It has also been lately shown that—given two pillars of the same diameter—a belt can in no case communicate the exact speed of the driving to the down pulley. There is no mention of V-wheels,—a form of gearing coming into use for many purposes. The chapters on shafting form the best portion of the book, and must be very valuable and useful to any engineer or millwright in want of such information. The engravings are also very good, but they greatly lack dimensions. To the millwright this book will be of some value; but it is a failure with respect to mill-architecture.

We repeat—while fully acknowledging the useful character of some parts of this work—that the work scarcely answers to our expectations. However, engineers of the standing of Dr. Fairbairn, in England, write so seldom that we must be grateful for what we can get. There are, indeed, few men that so greatly deserve the gratitude of the country and of the profession as Dr. Fairbairn. His experiments in iron, steam, and other questions—conducted at his own expense—have been landmarks for the engineering profession during the last quarter of a century. The Association for the Prevention of Steam Boiler Explosions, founded by Dr. Fairbairn, has already saved more lives than were ever saved by the Royal Humane Society; and no public recognition has yet been made of his services. We must nevertheless speak of the present book as we find it.

PROJECTED RAILWAY AND OTHER WORKS.

This is the long-advertisement season which issues in the ensuing session of Parliament; and, as usual, it yields a plentiful crop of new railway and other projects. The chief feature in the metropolitan railway advertisements is, that each comprises a number of distinct projects, or separate railways, to be cast like network over the several districts. Thus, there is a Hammersmith and City railway extensions project, with six different railway extensions, loop-lines, junctions, &c., intended to accommodate such places as Mortlake, Chiswick, Kew, Richmond, Hammersmith, Kensington, Ealing, Stroud-on-the-Green, Turnham Green, and other localities; but the details are far too intricate and lengthy for further notice here. Then there is a Hammersmith and Wimbledon project, with five distinct railways, as from the Hammersmith and City line to the Wimbledon and Croydon line of the London, Brighton, and South Coast, and to Kensington, with junctions connected with the London and South-Western. The Great Eastern are applying for power "to acquire station land adjoining Wormwood-street, and make railways [eleven distinct lines] therefrom to various parts of their system and the North London and Tottenham, and Hampstead railways." This network will catch up traffic in a multiplicity of places in the east of London, as well as at Hackney, Tottenham, Hampstead, Walthamstow, &c. Another East London project contemplates the "construction of railways to connect certain railways on the Surrey side of the Thames with certain railways on the Middlesex side thereof; acquisition of Thames Tunnel; working, and traffic, and other arrangements with divers railway companies, and with reference to the Haydon-square branch railway; arrangements with Grand Surrey Docks and Canal Company." There are no less than thirteen distinct railways connected with this project, the meshes of whose network are cast over Bethnal-green, Deptford, Whitechapel, St. George's-in-the-East, Cripplegate, Bishopsgate, Shoreditch, Mile-end Old Town, Aldgate, Minories, Rotherhithe, Wapping, and a multiplicity of other places. A company is to be incorporated "for making railways between Hendon and Chelsea, Chelsea and Bricklayers' Arms Station, Chelsea and Victoria Station, Victoria Station and Westminster, Westminster and the Metropolitan Extension of the London, Chatham, and Dover Railway; with branches to the Mansion House and elsewhere; powers of deviation; powers of interference with streets, roads, &c.; levying of tolls; compulsory purchase of land; junction with and use of stations of, and running powers over, and facilities for traffic over, the railways of other companies." That there is, in short, to be a general running into one another both of lines and trains seems but too obvious. The mere perusal of such advertisements confuses the brain; and what would be the upshot were one-tenth of the projects carried out, it is impossible to conceive.

In the provinces, also, many schemes are afloat; but we can only notice a few of these. A new central station at Leeds is projected. The site is principally on the north side of and fronting Wellington-street, and extending back to and including the Infirmary, or some part thereof, and extending in length from the present Central Railway Station in Leeds, on the south side of Wellington-street, to Albion-street.

The East Gloucestershire railway scheme has been revived, with the object of giving Cheltenham direct communication with London and Gloucester by a broad gauge line to Farringdon. The new line will proceed from Cheltenham through Lechlade and Burford to Farringdon as before, thereby shortening the London journey by twenty-three miles, and opening up the hill district of Gloucestershire; while at Lechlade a branch will be made to the Witney Railway, thereby opening up a direct communication with Oxford and the eastern counties. This branch will shorten the railway distance between Cheltenham and Oxford thirty-two miles; will give a third route to London *vid* Oxford twelve miles shorter than the present route; and will give direct communication by the London and North-Western line with Cambridge and all parts of the eastern counties.

A second scheme to shorten the communication between Cheltenham and London, and to connect this district with the eastern counties, has been proposed: this is "the London and Oxford District Railway;" and it is a modification of a narrow-gauge line laid out by Mr. Stephenson and improved by Sir Charles Fox. The line will follow the old coach-road over the hills, and, passing through Northleach and Burford, join the narrow-gauge system at Witney. This line also provides a central station at Cheltenham, and by a loop-line would be connected with all the other railways which touch the town.

Another line is "the Wilts and Gloucestershire Railway," to connect Chippenham and Stroud, *vid* Malmesbury, Tetbury, and Nailsworth.

Besides the railway projects, there are a sprinkling of others, such as "the Tower subway," for making a subway under the Thames, from Iron-gate-stairs, near the Tower of London, to Horsely-down Old-stairs.

A bill is to be brought into Parliament for making a new bridge over the Ramsdale valley at Scarborough.

HIGHAM FERRERS CHURCH.

The formerly collegiate Church of St. Mary is one of the largest churches in the county, and, both from its fine proportions and its historical associations, is one of the most interesting. The church stands on the north side of its large churchyard, and forms the chief object of a most picturesque group of buildings,—the bede-house and chapel being on the south side, and the schoolhouse on the west side, memorials of its great benefactor, Archbishop Chichele. This great man was a native of Higham Ferrers, and was discovered and raised to eminence by William of Wykeham. He held the chancellorship of Sarum, the bishopric of St. David's, and finally the Archbishopric of Canterbury, from the year 1414 to his death, 1443. Chichele founded here a college for eight chaplains, four clerks, and six choristers. The remains of the collegiate buildings still exist, though almost in ruins, in the principal street of the town. For the use of the college he placed stalls in the chancel of the church. The tomb of the great archbishop is in the north transept of Canterbury Cathedral. It consists of an altar tomb, supporting an effigy, at the extremities of which are two polygonal towers, surrounded with rows of niches, with statues, and surmounted by a richly carved canopy, the whole being most richly painted and gilt. It has recently been restored by the Fellows of All Souls' College, Oxford, who have also taken in hand the restoration of the stalls in the chancel of the church in memory of their founder.

A brief description of the church will be necessary to understand the account of the portions restored. It consists of a nave, large north aisle, or, as it might be called, a north nave, chancel, and lady-chapel, at the east end of the north nave, of the same dimensions as the chancel itself, north and south aisles, south porch, and western tower. The earliest portions of the church date from the thirteenth century: it then cousisted of a nave, north and south aisles, chancel, and west tower. The water-table of the old high-pitch roof still remains on the tower. The south arcade, south door of chancel, and part of the chancel walls are of this date. The tower, which had at that time no spire, fell in 1631, but was rebuilt similar to the old one, with the exception of the buttresses on the south side. The west door ranks among the finest works of art in the kingdom: it consists of a shallow porch, the outer arch of which is elaborately moulded and supported on shafts with elaborately carved capitals. Between this and the inner door the space is decorated with two small bays, by bold groining ribs, supported on corbels, below which are cusped pointed arches. The inner doorway is double, divided by a small shaft: the heads of the openings are segmental, and ornamented, as well as the sides, with foliage and small figures. The central shaft supports the pedestal, on which stood a figure of Our Lord or the Virgin. The remainder of the tympanum is filled with circles containing sculptured subjects, illustrating events of Our Lord's life.

In 1290 the original north arcade and north aisle were taken down, and the present north nave and lady-chapel built. The west window and a window in the lady-chapel are of this date. About 1340 the church was again altered, the north aisle was built, the original high-pitch roofs of the two naves taken down, and flat roofs, with a clerestory, substituted, and new windows placed, with one or two exceptions, throughout the church, the original windows of the old north aisle being altered as at present existing. The spire was also built at this time. The only alterations effected in Chichele's time were the battlements of the nave and chancel, two windows, viz, one at the east end of south aisle, and the other at the west end of north aisle. The screens and stalls of the church are also of this date. There are several very fine brasses in the church, among which is one in memory of Thomas and Agnes Chichele, the parents of the archbishop: there is also a very fine tomb, with a brass (a later addition) between the chancel and lady-chapel.

The state of the church from the lapse of ages and neglect was deplorable in the extreme, and the roofs and walls were in such a state of decay and ruin as to be absolutely dangerous. In fact, unless something had been done, and that at once, the magnificent church of Higham Ferrers would have become a complete ruin. The interior was filled with old and inconvenient pews, while a huge west gallery blocked up the tower arch, and part of the windows in the clerestory were cut away, and filled in with modern sash windows.

The contract, which was taken for the first part of the restoration by Messrs. Ruddle & Thompson, of Peterborough, included the substantial works; viz., the re-building of the whole of the walls of the naves and aisles and porch, with the exception of the arcade between the north and south naves, with new roofs of oak to the entire church, including the chancel and lady-chapel. The old window jambs, heads, and tracery; the doorways, caps, bases, and mouldings of arcades; in short, every piece of old work that it was possible to reuse, was re-built in precisely its old position. The roofs were constructed as the old examples. One truss of the old roof remains at the west end of the nave. The chancel roof, which was comparatively modern and of a low pitch, cutting off the top of the east window, has been renewed, following the pitch and detail of that of the nave. Against the north-east angle of the tower a new staircase turret was built, terminating below the belfry stage, and surmounted by a figure of Chichele. In the course of the restoration a low door and a flight of steps were discovered, leading to a crypt under the east end of the south aisle. Owing to want of funds, the remaining works were delayed some time, but were again resumed by Mr. J. Howes, whose contract included the floors and the blocks of seats, and the relaying of all the passages of nave aisles and chancel with red, green, and buff tiles, in patterns. The tiles were made by Messrs. Maw, from the pattern of the old tiles which were found in the course of the works. The church was also fitted with a warming apparatus, by Messrs. Remmington. After a short interval the contract for the reseating was taken by Mr. Conquest, of Kempstone. The whole area has now been filled with open seats of English oak, the old bench ends and fronts, of which a few old examples remained, being taken as the pattern by which the new ones have been made, the tracery and carving in all of them being varied. The new pulpit, reading-desk, and lectern are also of oak, and elaborately carved from the architect's designs, and executed by Mr. Conquest. The old Early English font has been refixed on a new step, and placed in the south aisle. In addition to their former subscriptions, the Fellows of All Souls' College have re-

stored the stalls in the chancel, which were in a most dilapidated and dirty state, the oak used in the fronts and piecings being taken from the old oak of roofs. The screens of the chancel, lady-chapel, and aisles are also being restored by Mr. Conquest, under the architect's superintendence. The church is now lighted with gas: the gas standards, which are of iron and polished brass, are the gift of Mr. G. Bower, of St. Neots.

The ground outside the church, which had risen up high against the walls, has now been cleared away, and the paths laid with gravel round the church. The only portions of the restoration at present from want of funds left incomplete, are the altar and rail, and tiling of chancel within the rails and reredos.

The clerk of the works for the former portion of the works was Mr. Joseph Butler, and the whole of the restorations have been carried out from the designs and under the superintendence of Mr. William Slater, architect.

SHERIFF BELL ON ARCHITECTURE.

GLASGOW ARCHITECTURAL SOCIETY.

At the *conversazione* of this society various gentlemen addressed the meeting; amongst them Sheriff Bell, who said,—The more one reflected on the importance of architecture in modern times, the more one was convinced of the absolute necessity of seeing minds of intelligence and education applied to the subject. There was no art which so entirely combined the useful with the beautiful as architecture. When they found the comforts and elegancies of social life raised out of stone, and when, in addition to that, they found poetical effects given to that stone, so that when they looked on it the combinations were such that they excited noble and elevated emotions, they must all feel that architecture, which produces such results, was a great and most important art-science. He thought that all men who lived in cities were very much at the mercy of architects. It was in vain to lay out beautiful cities, fair streets and squares, and public places, if no more is to be done with those cities than to put up in them as houses certain bare walls with windows in them. No man who had any regard for the place of his own birth, or the progress of his own nation, but must wish to see its cities adorned in a far different way from that; and when they reflected on what were the great features of any city, they at once saw it was not a combination of stone and lime, but what made the city was its great architectural features. Even London itself,—when they thought of it, they thought of the great works of such men as Inigo Jones and Christopher Wren. Without St. Paul's, the noble Palace of Westminster, London itself would not be a capital worthy of this great nation; and let an architect in any city erect a grand and beautiful building, that city became consecrated and ennobled by that building. Cologne was a romantic city on the banks of the Rhine; but what would Cologne be if it were not for its sublime cathedral? Milan was one of the fairest towns of Lombardy; but were it not for that great cathedral dome, Milan would not hold the place it does in the estimation of mankind. The same might be said of St. Peter's, St. Paul's, and of every other great building. It was these great monuments of architecture that gave character and value to cities; and it was not those great buildings alone, but it was beauty of individual details in streets and other places of the city that made it a valuable and delightful city to dwell in. Then, again, when they looked at those scenes in valleys or by the hill-sides, where, after the bustle and fatigue of their daily life in cities the tired mind sought for repose, how unfortunate it was if they did not find that the most beautiful site was not adorned suitably, as it ought to be, with what were often called villas; but how, on the contrary, if they saw an appropriate building put down on a suitable site, they felt that architecture combined with nature, the whole forming one harmonious picture to gratify the human mind. Now, it was no mean task that the architect had before him. It was a very great and a very important one, and therefore required to have brought to bear upon it refined and educated minds. He had heard with pleasure that it had suggested itself to at least some of the members of the Society, and he thought it was a subject worthy of their consideration, that it would be right in Glasgow, looking at the progress of architecture amongst them, and looking at the many eminent architects who were starting up amongst them—it might be right to consider whether there should not be a chartered body of architects in this city who would admit to the membership of their body only after a stringent examination, and which would exact a due knowledge of the subject from parties who had the intention of becoming members of that incorporation. They had now in Glasgow some highly eminent incorporations, each of which, he had no doubt, had done great good. The Faculty of Procurators, for instance, had done much good in advancing legal knowledge. There were also the chartered accountants, who formed a most important body in a great commercial city, and he thought it might be equally satisfactory to see established a chartered body of architects. He by no means applauded giving such a body exclusive privileges. There might be men who would not seek to join them—men even of established reputation,—but membership in such a body would always be a test or security for the possession of ability in the profession. He was very glad to know that in this Society, although called the Architectural Society, other arts were conjoined, many of the members of the Society not being architects, but gentlemen belonging to cognate professions; and he was also delighted to see, from the many beautiful works of art exhibited in the hall, that the Society specially admired and cherished the noble art of sculpture. There was no more beautiful auxiliary to architecture than sculpture, more particularly ideal sculpture, which was perhaps the highest of all art. In the report which had been read that night allusion had been made to the decease of a very eminent architect, whose death was a great loss to Glasgow; and they might also allow him to allude to the death of another and younger man, who was not an architect, but a rising sculptor, in the presence of many eminent sculptors established among them. He thought the story of Mr. George Mossman's life was one full of the deepest pathos and interest. He was a young man of great natural genius, animated by fondness for his art. He went to London to prosecute his studies, studied there under Foley, and another great sculptor, carried off in the school of the Royal Academy a first prize, and returned with these honours to his native city, hoping to win further fame and honour here. He was not long here, however, before ill-health overtook him; and for several years he struggled on under his affliction, till at last, in the fair flush of early manhood, he sank into the grave. But he had left behind him those who were weeping for his loss, a widow and children, besides other friends. He had also left behind him works of ideal sculpture, which, he thought, displayed at once great genius and the promise of great power. The learned Sheriff then referred to several of the works of the late Mr. Mossman which were present in the hall, which the artist had not had time to execute in marble, eulogising these as exhibiting great power, and adding that it would be a graceful and good act for some of the merchant princes of Glasgow to throw a little sunshine into the sculptor's house of mourning by ordering some of these works to be put into marble. Sometimes but little attention was paid to rising merit, whether it be dead or living; and he besought those who were collecting works of art not at all times to seek works merely of the great artists who had achieved a European reputation, but rather to look for works of merit from young artists; and he assured them that, in purchasing these works and aiding these artists, they would find in many cases in the future that they had been "entertaining angels unawares."

CONGRESS OF GERMAN ARTISANS AT FRANKFORT.

The Congress of German Artisans was opened on the 24th of September. About 200 members from Central and Northern Germany responded to the invitations to take part in the discussions of this the second meeting of the kind that has ever been held in Germany. The members, however, represented masters of various arts and trades, rather than common workmen. The former constituted certainly the majority.

According to the *Social Science Review*, the subject first discussed had reference to a project for the formation of a general law that should be sanctioned by the State, for the trades of Germany. This project was adopted unanimously, the speakers seeming one and all to be of opinion that political economists, as a body, do not in any way understand the position and wants of workmen and of their masters. The next question discussed had relation to the most suitable methods for ameliorating the lot and position, in other words, the well-being of the workmen. The speakers were in favour of the continuance and preservation of the system of trades-freedoms, and held that a workman ought not to become a master until he had undergone an examination showing proficiency in his department.

On the following day, September 26th, the Congress discussed a project elaborated by the central committee of Hamburg, for securing a general organisation of every trade in Germany. The discussion on this project, which was very warm, was continued throughout the day, and was not concluded. On the 27th, the Congress came to a resolution in which it adopted the following essential point, included in the project that had been submitted:—"That masters ought to be protected in every way from any competition that may arise from their own workmen or from combined capital."

SOCIETY OF ARTS.

On Wednesday evening last, the 110th session of the Society was opened at the Society's house, in John-street, Adelphi; Mr. W. Hawes, the chairman of the council, presiding. The chairman delivered an address, in which he reviewed the past policy and explained the future intentions of the Society. He afterwards distributed the Prince Consort's prize awarded at the last examination, and the prizes awarded to the artist workmen who were successful competitors at the wood-carving exhibition held in June last.

The first-mentioned prize, which was 25*l.*, was awarded to Mr. Wm. Vaughan, aged 22, City of London College, clerk, who had obtained the first-class certificates in arithmetic, geometry, book-keeping, mensuration, algebra, trigonometry, and in conic sections. The names of the others we have already given.

The meeting-room has been decorated by Mr. Crace. We must see it again before giving any opinion upon it.

BELFAST.

A floating and a graving dock, of extensive size, are about to be constructed here, the successful contractors for the graving dock being Messrs. Thomas Monk & Co., of Birkenhead; and for the floating dock, Messrs. Smith, Kent, J. H. and T. L. Browne, of Belfast. The plans and other particulars have been prepared by Mr. Wm. H. Lizars, the resident engineer (under whose immediate supervision the works will be carried on), and approved of by Mr. George Smith, C.E., and conservator of the port and harbour. When these improvements are completed, Belfast will be enabled to give accommodation to a much larger class of vessels than at present, a circumstance that will aid to a great extent the marine interests and general commercial prosperity of this enterprising port.

THE WALLRAFF-RICHARTZ MUSEUM, COLOGNE.

The edifice illustrated was erected at the cost of Herr Richartz, a private citizen of Cologne, Germany, to receive the works of art given to that city by Professor Wallraff. It stands in an open plot of ornamental ground adjoining the Minoriten Kirche, and so can be well seen. It may be taken as a specimen of the kind of Gothic heretofore designed by the modern architects of Germany.

The scale attached to the plans is in Rhineland feet. The Rhineland foot is to the English foot as 1·0298 to 1. The collection consists mainly of early specimens of the Cologne School of Painting, having considerable interest. In the basement are Roman antiquities found in and near the city,—the *Colonia Agrippina* of the Romans.

THE WALLRAFF-RICHARTZ MUSEUM.

THE WALLRAFF-RICHARTZ MUSEUM, COLOGNE.

AGRICULTURAL HOTEL AND FARMERS' CLUB.

Messrs. Trollope's tender of 23,340*l.* has been accepted for the above building. The work of clearing the ground is to be commenced forthwith, and the structure is to be handed over to the directors by the end of September in next year.

The building occupies one entire side of Salisbury-square, Fleet-street, which site was selected mainly on account of its central position, and the quiet, for which, although in the very heart of London, the neighbourhood is noted.

There are upwards of 100 rooms in the hotel, and the whole of the arrangements and the character of the exterior are convenient and substantial, but inexpensive. There are the usual public rooms for the hotel, and a large room for public dinners, upwards of 70 feet long by 30 feet wide. There are also club, coffee, dining, and reading rooms (the Club alone bringing to the hotel the custom of 600 members). The remainder are chiefly bed, dressing, and bath rooms, common to both hotel and club.

The architect is Mr. John Giles, of London. It may be mentioned that no part of the contract sum is taken in shares.

NEW YORK NATIONAL ACADEMY OF DESIGN.

At the end of last month the corner-stone of the new building for the National Academy of Design was laid with ceremonials befitting the occasion. The building is to be erected on the north-west corner of Fourth Avenue and Twenty-third-street, in the midst of a tract which was occupied by farm-yards, meadows, and orchards when the National Academy was founded. The New York *Independent* gives the following particulars:—

"The design of the new Academy is a novelty, and the architect, Mr. P. B. Wight, a graduate of our Free Academy, has availed himself of the abundance of varicoloured building material which we are blessed with to introduce effects which will be startling to eyes accustomed to the brown monotone of our street façades. As we understand it, the basement is to be composed of alternate bands of greywacke and the grey marble of Westchester, *while the front is to be of white marble. Our National Academy will be able now to boast of a domicile of its own, which is more than the Royal Academy of London, its senior by nearly a century, has ever been able to do, with all the patronage and the prestige of royalty attached to it.* Our National Academy has led a sort of vagabond existence hitherto, moving about from one loft to another all over the city, until at last, by the energetic efforts of its members, and the munificence of some of our art-loving people, it will be able to boast of a local habitation of its own. The institution had accumulated some 60,000 dollars, and this sum was increased nearly threefold during the past two years—the years of our great consuming war, be it remembered,—by creating fellowship members."

Our authority adds:—

"The Academy, we are happy to know, will be built, and we trust it will be so managed as to lead to the more liberal cultivation of art among us; for, unless it shall do that, it will be of no more importance to us than any other building with a showy front. That it will be so conducted, however, we have great hope. The little town of Dusseldorff, in Germany, has a school of art. They talk, too, of the Brussels' school, the French school, and so on; but who has heard of the New York School of Art, or the American school? Yet why not? What is Dusseldorff compared with New York; or Belgium compared with our America?"

WATERWORKS.

Application is to be made to Parliament next session for the supply of the town and neighbourhood of Whitby with water by a limited company. The water is to be gathered into reservoirs from several local streams called the Hill Slack, the Lythe Beck, the Grand Beck, &c., and conducted by conduits.

A similar application is to be made by the North Cheshire Waterworks Company, under a new name, for the supply of the parishes of Bowden and Ashton-upon-Mersey, Northen, Warburton, and Lymm, all in Cheshire, with water by a conduit or line of pipes, commencing in the township of Stretford, in the parish of Manchester, and county palatine of Lancaster, by a junction with the main of the Manchester corporation.

A public meeting has been held in Huntingdon, at which it has been resolved to have a system of water-works for the town. The estimated cost is about 4,000*l.* Plans were presented by Mr. Hutchinson. A provisional committee was appointed to inquire as to the objects of the meeting.

The Halsted Water-works are now in operation. The general works have been carried out by Mr. Tanner; but all those immediately connected with the well were executed by Messrs. George Wood & Son, of Chelmsford. Considerable difficulty was experienced in sinking the shaft of the well to the specified depth, the lower 10 feet the well to the specified depth, the lower 10 feet dipping into a very strong spring, so that relays of men were employed day and night pumping to keep the water down. This well is 140 feet deep, 5 feet in the clear, and bricked 9-inch work in cement from top to bottom. There is also an adit horizontally 110 feet down 15 feet long by 6 feet diameter in the clear, also bricked with 9-inch work in cement. The boring is continued down from the bottom of the well through the elastic clays to 310 feet into the chalk, and the water is found in a bed of soft chalk, separated from the hard stone chalk by a thin hard vein nearly resembling china. The supply is said to be abundant. The pumps are worked by a 10-horse engine, plied by Messrs. Whitmore & Sons, of Wickham Market; and the water is pumped into a cistern 12 feet high, placed upon a tower 20 feet high, and the base of the tower is 102 feet above the level of the water at the Mill Head: there is, therefore, a pressure at the bridge of 134 feet when the tank is full: the tank holds 24,000 gallons.

THE LAND REGISTRY SYSTEM.

The *Times* announces that the new Land Registry system has *not* proved a failure, as had been generally supposed. Of course, during the first year it has been up-hill work in introducing a system entirely new; but good progress has been made. There have been forty-two applications for registering property worth a million sterling, nearly all of which have been entertained: a few did not come under the provisions of the new law. No serious "difficulties" have been encountered in working the law: no very heavy expense has fallen upon those who have taken advantage of it. We have not yet looked into the results of its working for ourselves, but may do so presently. What the uses of the system are this extract will show:—

"The operation of the new system is shown by what has actually been done. For instance, an estate of the value of 30,000*l.* was registered, and was then sold by the registered owner. The only title required was the production of the certificate of title, the conveyance was in a few lines,—which was carried to the office and entered on the register in a few minutes. The new purchaser mortgaged the property, and the same simple process effectuated the charge. The whole affair is thus one of hours instead of months, and the cost is, of course, regulated by the simplicity of the transaction. According to the old system, in such a transaction as this the seller and the buyer would each have had his solicitor and conveyancing counsel, long abstracts of title would have been prepared and delivered; requisitions would have been made; and, after months of delay and at a commensurate cost, that part of the affair would have been finished. But then the mortgage affair would begin; and again there would be the two solicitors and counsel, more abstracts, more requisitions, more delay, and more expense. It is gratifying to find, by actual experience, that the new system which introduces such a beneficial change in one of the great departments of the law is capable of practical operation."

DRINKING-FOUNTAIN MOVEMENT.

Durham.—Within a short time three public drinking-fountains have been opened in the city of Durham. The first is situate at the foot of Elvet Bridge; the second in the Market Place; the third on the North-road. This last has just been formally dedicated to public use. The fountain is built upon a portion of ground situate between Atherton-street and the pier of the North-Eastern Railway viaduct. It is built of Dunn House stone, and stands about 12 feet high by 8 feet wide, the centre portion standing prominently forward from a recessed retaining wall, rising from a moulded base forming a gable over a Gothic arch, supported by two polished red granite columns with carved capitals. This gable is enriched with raking mouldings and mitres into an ornamental hipped roof, supported by enriched corbels, and finishes with a finial composed of water-lilies, carved on the face of a pointed embrasure apex: moulded embrasures, with sunk circles and trefoils, recede on each side in the form of an obtuse pyramid, terminating with semi-buttresses, giving a finish to the whole. In the Gothic arch, between the granite columns, is an Aberdeen gray granite panel. In the tympanum is carved an ornamental quatrefoil, with the city arms in the centre. Below is a conventional grotesque gargoyle, designed out of foliage, and carved in a circle in the centre of the panel. Out of the mouth of this gargoyle the water flows into a polished marble stoup, and is conveyed to another gargoyle in the dog-trough below. The dog-trough is formed out of the base of the fountain. The water has been conveyed in pipes from a spring known as Flass Well, at the base of the Red Hills. The type of the design is Early French. The whole has been designed and carried out under the superintendence of Mr. T. C. Ebdy, of this city, architect. The carving has been executed by Mr. W. Gainford. The contractor was Mr. G. Charlton.

Northampton.—The Isaac fountain and lamp have been inaugurated. They are in the sixteenth century Italian style, of iron, but with enrichments of bronze. The plan at base of the structure is square, but with ornamental trusses at the canted corners. On the north and south sides are drinking-fountains, and on the east and west sides are shields, with the inscription. Over the fountains and plates is an entablature, with emblematic masks, and surmounting this, on shields, are the coat of arms of the borough and the crest of the donor, Captain Isaac, with scroll for mottoes, interlaced with ornaments. On the top of the entablature, and over the trusses, stand the four fountain basins, with tazzas. The water springing from these will fall into the basins, and from thence through the masks, into the basins of the drinking-fountains. The gilt bracketed globe lantern is 4 feet in diameter, surmounted with a Maltese cross; and the stand of it rests upon the capital of the ornamental column. All the ironwork is bronzed, and is raised upon four steps of grey granite. The total height of the structure is 45 feet, and it is 19 feet across the base.

Leamington.—The public fountains here have also been opened for public use. These public fountains supply the saline Spa or Leamington waters.

SCHOOLS OF ART.

The Coventry School.—The new school building just completed, and an account of which was given in the *Builder* of 31st of October, has been formally opened with a *conversazione*, at which Lord Leigh, the lord-lieutenant of the county of Warwick, presided. The Right Hon. C. B. Adderley, M.P., delivered a long address. He complimented the people of Coventry on the spirit they had shown at a time of depression of trade, in looking out for new modes of employment, and in founding such an institution as that just opened. The elements of success in every art, he said, was a knowledge of the first principles of design. He looked on the School of Art as a nursery for that skill which would insure mercantile success in art. Mr. Gladstone in his magnificent oration at Burslem had dwelt upon the relations of utility and beauty; but even he, in speaking on that subject, fell short of the fulness of the truth. He fell short of the full conception of beauty, which, after all, depended more on adaptation, fitness, and propriety, than on lines, colour, or ornament; the last being a mere addition, dependent for its own beauty on its appropriateness to the main design. All the works of art in Coventry had beauty as a primary ingredient in their value; and there could be no doubt of the advantages it might reap from a good school of art. He had heard the complaint that the Department of Art at Kensington engrossed too much of the money, granted for the purpose of encouraging art, to themselves. If this were the case, let the provincial schools of art, if they felt aggrieved, cry out in time. At the same time they should not forget that their objects were identical; that the Central Metropolitan Association must naturally engross the largest part of the grant; that it must have a museum for the use of the whole country; and still more a training institution, on a large scale, and of so high a standard as to be able to furnish all the provincial schools with masters. Moreover, the aid the Treasury might give, after all, should be nothing more than a subsidy, for the strength and life of these institutions is in their local support. He had heard many complain of the new minute on the subject of schools of art. He thought the fear and alarm which it had created would be found scarcely justified in experience. Of this he was firmly convinced, that it was in the right direction; inasmuch as it shook off a too great con-

nexion between Government and local institutions. The meeting was afterwards addressed by Sir Joseph Paxton, M.P., and others.

The Bath School.—The annual distribution of prizes to the successful pupils of this institution has just taken place in the Guildhall. The Mayor, who presided, in opening the proceedings, said that he was sorry to learn that this valuable institution was not sufficiently supported, and that the funds were at a very low ebb. He trusted that some steps might be taken to keep it, as it should be, in a state sufficiently active to afford the instruction which, if lost, would be very much regretted by his fellow-citizens. The Rev. E. D. Rhodes, the president of the institution, then addressed the meeting. This year, he said, they were going to have the British Association for the Advancement of Science here, and they not only expected a right hearty welcome, but they expected to see that there was much of intellectual and artistic talent amongst the population; and therefore it would be, as he had said, a disgrace to Bath to have to inform such an association that during the year the School of Art had become bankrupt. At present the liabilities of the society were 127*l.* 7s. 9½d.; and the total amount of the assets, 68*l.* 15s. 6d., leaving a deficiency of 58*l.* 12s. 3½d.; so that the debt of the society in 1863 was about the same as it was in 1861. It might be said that their discouragements were no greater than before; but he could not think so, for, independently of the falling off in the subscriptions, there was, which was more serious, a considerable diminution in the number of their pupils, and of that class, too, which, in a pecuniary sense, assisted the society the most, and whose attendance in other respects was most desirable—he alluded to the lady pupils. They did not feel that this falling off was to be ascribed to any defect in the working agency of the society; for he believed that it was owing to another institution having been opened, which had ventured to take upon itself the title of the "Bath School of Art,"—an instance of unjust assumption, the party knowing that there was a Bath School of Art existing at the time, under the direct sanction and approval of the Government. Such an institution having been opened in a part of the town more come-atable and in a more favourable locality than that occupied by the rooms of their institution, it was nothing extraordinary that it should have taken the wind out of their sails, and reduced the number of their better-paying pupils. Still, they had at the present time no less than 1,000 pupils in connexion with the institution. That the institution should conduct the artistic education of a thousand pupils at so small a rate that it was not able to meet its expenses, must be an appeal utterly unanswerable to all right-feeling, generous-hearted persons in the city of Bath. The payment from pupils met the expenses of the institution within from 15*l.* to 20*l.*; but besides that there was the debt of 58*l.* If the debt were not liquidated, and they could not see their way to equalize the income and expenditure of the society, then by the 25th of next March its doors would be closed. Mr. C. E. Davis, hon. secretary, observed that if the class of lady pupils were increased to thirty, they would be able to pay the expenses and to carry on the school.

SANITARY IMPROVEMENT OF TOWNS.

Sunderland.—An inquiry having been ordered by Government, some time ago now, as to the expediency of purchasing land to extend the People's Park of the borough, a paper was read by Alderman Williams, chairman of the Sanitary Committee of the Corporation, before Mr. Rawlinson, the Government commissioner; and the result of the inquiry was that Mr. Rawlinson reported in favour of the proposed purchase; and Sir George Grey has confirmed the report, by which 10½ acres will be added to the present park. The substance of the paper alluded to has been printed, together with a special report of the Sanitary Committee on the health of the town, with reference to the increased disease and death attributed to the sanitary works, as we have already stated, but which was clearly shown in this report to have prevailed precisely where the sanitary works had not yet been carried out.

Liverpool.—The corporation have given notice by advertisement of their intention to apply to Parliament in the ensuing session for power to purchase, alter, demolish, or otherwise dispose of courts and alleys of unhealthful character within the limits of the borough, as already announced from the proceedings of the town council.

Keswick.—At a recent meeting of the Keswick Board of Health, the clerk read a letter from Mr. Simon, of the Medical Department of the Privy Council Office, expressing the opinion of the Lords of her Majesty's Council, that, notwithstanding the existence of a Board of Health in Keswick since 1848, no sanitary arrangements, with one important exception, had been carried out. They directed attention to a copy of the report of their medical inspector in respect to Keswick, and wished to know what measures the board intended to adopt to remove the present grounds of complaint. The report of the Keswick Sewerage Committee was then read, from which it appeared that the clerk had written to Mr. John Lawson, C.E., to inform him of the movements of the board, to ask him what necessary surveys and plans would be required, and on what terms the necessary amount of money could be borrowed from the Government, and for any other needful information. In his reply Mr. Lawson stated that the Public Works Commissioners lent money to local boards at 5 per cent., the principal being repaid by twenty yearly instalments. The committee recommended the engagement of Mr. Lawson as engineer, and that he be requested immediately to prepare the necessary plans and estimates. The report of the Sewerage Committee for carrying out the drainage of the town was unanimously adopted.

Hexham.—Mr. John Lawson, C.E., is at present engaged in laying down water and drainage works for Hexham, which has fought almost as long for the carrying out of the Health Act as Keswick has done.

Houghton.—A meeting has been held in Houghton, to consider the sanitary condition of the village, as reported upon by Dr. Wheatley to the local board of guardians; to devise means for the removal of the nuisances pointed out therein; and to take such steps as will ultimately place the village in a cleaner and a more healthy state than it is at present. A committee was appointed to arrange a plan for carrying out a proposal to bring a covered drain up from the Beck to a certain point, and then to allow house-owners to drain into it.

Shrewsbury.—At a recent meeting of the town-council a report of the Improvement Committee was read, which stated that "in pursuance of the order at the last council meeting, a specification was prepared by Mr. Curley for executing the main sewer between the English-bridge and Preston-boats, and tenders were duly advertised for, and the following were received and considered by your committee, viz.:—

Moore	£10,334 12 6
H. & W. Carter	10,970 0 0
Field	12,668 3 0
Moxon & Co.	13,804 6 8
Dixon & Sleight	19,750 0 0
Thomas	30,890 16 0

These several amounts included compensation for land. The estimate of Mr. Curley amounted to 10,408*l.* 17s.; and for land and wayleave, 222*l.* 14s.: total, 10,631*l.* 11s. The committee do not feel justified in recommending such an outlay to be incurred. They had reason to hope from the report of Mr. Curley, of December, 1861, that 7,800*l.* would have been sufficient to have constructed the main sewer in question, and also effectually to drain the Coleham and Abbey-foregate districts. It will, however, be in the recollection of the council that an alteration was made by Mr. Bazalgette in the size of a portion of the tunnel suggested by Mr. Curley, of from 4 to 5 feet in diameter, which, of course, would add to the expense then contemplated by the latter gentleman. It will now be for the council to decide as to what course shall be adopted with reference to those portions of the borough which are without sewerage and require immediate attention, and also as to utilizing as far as possible the present sewerage."

HARBOURS AND BREAKWATERS.

Downs Harbour and Docks.—At a special meeting of the promoters of this project, held in Deal, Mr. Alfred Giles, C.E., attended and exhibited his plans. They consist of a basin of 30 acres, to be constructed on the waste ground near Sandown Castle, to be connected with Sandwich by a cut, 100 feet wide, through which the waters of the Stour can be diverted, when necessary, to flush out the entrance of the basin. The cost is estimated at about 200,000*l.* The engineer explained that the outer basin would be always open, and have 10 feet of water at the lowest spring tides, and the entrance to the sea protected by two arms or piers. The drainage of the marshes would not be interfered with; and the waters of the Stour would be so seldom required for flushing, that the river above and below Sandwich would not be injuriously affected. It was resolved to adopt the plans and estimates of the engineer, and apply to Parliament for powers to construct the necessary works.

The Tees South Gare Breakwater.—The foundation-stone of a breakwater has been laid at the mouth of the Tees. The breakwater is intended to extend seawards upwards of two miles, and when completed will form a harbour of refuge during the prevalence of easterly gales. The materials of which it is composed are the refuse of the numerous furnaces for smelting iron, which have sprung up with such marvellous rapidity in this neighbourhood during the last few years. The breakwater now stretches from the limit of high water to a distance of a mile and a half, and it is intended to carry it upwards of a mile farther. The contractor is enabled to execute 10 yards in length per week, tipping about 600 tons of material per day. At the end of the South Gare it is intended to build 100 yards of ashlar stone, and upon this portion an iron lighthouse will be constructed, showing light 60 feet high from the top of the breakwater. The breakwater will be 5 feet above high water of spring tides, and it is expected it will run down at a slope of 6 to 1 to the sea-side. Training walls will also be constructed so as to direct the current on the bar. When the North Gare is constructed there will be a channel about 700 yards between them, and the scouring effect will be such as to fix as well as deepen the bar, which is at present of a very shifty character. The cost of the South Gare breakwater, had it been constructed of stone, would have been about 600,000*l.*; but, owing to the facilities already described, its actual cost is estimated at little more than 100,000*l.* The sum will be advanced on loan by the Exchequer Loan Commissioners, on the security of the tolls on shipping levied by the Conservancy Commissioners. Mr. John Fowler is the engineer of the Tees Conservancy Commission; and Mr. John Anderson, contractor of the works.

Harbours and Docks in South Wales.—Efforts are being made at present to increase the harbour and dock accommodation at the different ports of South Wales, and more especially at Llanelly, Swansea, and Milford Haven. The trade of Swansea has shown such remarkable activity and increase within the last few years, that it has been found desirable to take measures with the view of deepening the entrance channel, the extension of the western pier, the alteration of the east pier, and the erection of the requisite lights. Mr. Abernethy, the Harbour Trust engineer, estimates the cost at 30,000*l.* The Harbour Trust of Llanelly have also seen the importance of increasing the floating accommodation at that rapidly rising port. The Llanelly Railway and Dock Company have agreed to carry out the desired extensions and improvements, provided the Trust will give certain guarantees in return. These the Trust have consented to give. An Act was obtained last session for the construction of docks at Milford Haven, and it is rumoured that the London and North-Western Company are not unwilling to lend their aid to the project.

FIRST WIRE SUSPENSION BRIDGE IN BRITISH COLUMBIA.

TRUTCH'S Wire Suspension Bridge over the Fraser, near the Indian village of Spuzzem, by last despatches was just about to be thrown open to traffic. The bridge crosses Fraser River at a point three-fourths of a mile below Chapman's Bar.

It is situate at a contraction of the river, where the bed-rock rises almost perpendicular on both sides, the towers springing up almost immediately over the water, and the bridge having a clear span of 268 feet. At low-water the roadway of the bridge will be 90 feet above the stream, and the highest rise of this year's water was 26 feet below the lowest point of the bridge.

The timber for this work was cut in the forests near the spot, and all the sawing was done by hand. The tower timbers are each 20 inches square. Supporting the cables are sixteen of these sticks, each 26 feet 6 inches long, four sticks being framed together by means of fourteen girth timbers and seventeen 1¼-inch wrought-iron bolts, spread at bottom, resting on heavy sills, and coming together at the top, forming a pyramid of massive timber. On the summit is fitted a heavy cast-iron saddle, covering the whole of the timbers, and keeping the cable which rests on it in position: this arrangement forms one of the towers, there being in all four of them, two at each end of the bridge. These towers are erected on granite

piers, 32 feet long by 12 feet wide on top. The stone was quarried out at the spot, and the lime employed was obtained six miles from the bridge, where a very good quality of limestone had been discovered in grading the road.

The cables, of which there are two, are each 4½ inches in diameter, 528 feet long, and are composed of 1,264 wires, laid up in linseed oil, and protected externally by a coating of tar, pitch, and oil, boiled together, and payed on while hot: each of these cables weighs twelve tons. The current at this point when the river is high is extremely rapid and dangerous. A small line ½-inch thick was first taken across by means of a canoe going a long distance up the river and dropping down as it crossed; then a stronger line was taken across by means of the small one; and finally a wire cable, 1¾-inch in diameter, was placed in position and firmly anchored on both sides of the river: by means of this small cable the larger cables to which the entire bridge is attached were taken over and put in position.

The designer and constructor of the bridge was Mr. A. S. Hallidie, of San Francisco. The entire cost of this bridge was 30,000 dollars. It is to be called the Alexandra Bridge. With a load of 4½ tons passing over it, it deflected only one-eighth of an inch, according to the measurement of Lieut. Palmer, R.E.

CHURCH-BUILDING NEWS.

Lowestoft.—The spire of the parish church is much out of the perpendicular. Mr. J. L. Clemence, architect, was consulted upon the subject, and under his supervision the spire has been raised 8 inches at the base, on the south-east corner.

Brandeston (*Suffolk*).—The mortuary chapel and burial-ground of Brandeston Church have just been consecrated. The church has lately been restored, at a cost of between 1,000*l.* and 2,000*l.*, defrayed by Mr. Austin. The mortuary chapel is built of red brick and black mortar, with small black bricks inserted at regular distances in diagonal lines, and there is a buttress at each corner. The chapel stands east and west, and its length is 33 feet, and width 18 feet, fitted with a reading-desk and movable benches, and will afford accommodation for about eighty people. The architect is Mr. Phipson, and the work here, as well as at the church, was done by Brandeston tradesmen, Bedwell & Emeny.

Holbrook.—After undergoing considerable improvement and additions, the parish church of Holbrook has been reopened. The chief addition to the building consists of a new north aisle, corresponding in extent with the older one on the south side: it is constructed with rubble walls, with a slated roof, which is within a foot or two of the top of the wall of the nave, so that it looks as if a lean-to of a more substantial and artistic character had been stuck on to the old building. The church is now benched throughout: the benches are of pine, and instead of being stained or varnished they are hand-polished. The new aisle is lighted by three windows in the northern wall, and one at the western end, where there is also a new door. The style is the transition from the Early English to the Decorated, and in this respect the architect abstained from making it correspond with the old south aisle, which is a poor specimen of the Perpendicular style. In the place of the window which formerly disfigured the chancel is an east window, with three lights, in the same style as the north aisle, presented by the pupils of the rector of the parish, the Rev. F. C. Childe. In the southern wall of the chancel a stained glass window is to be placed, by Mrs. Burton, of Holbrook, in memory of her son. A large new vestry has been added, the doorway to which was formerly a recess in which stood an altar-tomb, but which was made into a doorway in 1824. Beside the door is a niche, apparently a piscina, and while the builders were at work this was opened, and a broken pot or urn was found, in which were remains, proved by analysis to be those of a human heart. The architect intends to submit these remains to the Society of Antiquaries, after which they will be replaced. Mr. R. M. Phipson, of Ipswich and Norwich, was the architect, and the contractor was Mr. Ringham, of Ipswich. The total cost of the alteration will be about 900*l.*

Colchester.—The new district church of St. John the Evangelist, Ipswich-road, Colchester, erected for portions of the six parishes of All Saints', St. Botolph, Greenstead, Milend, Ardleigh, and Langham, has been consecrated. The church is situate about two miles from Colchester, on a plot of ground given by the Countess Cowper, with a burial-ground and site for the parsonage. It is built in the Decorated style, in its earlier period. Brick being the material of the district, it was thought better to adopt it if possible in preference to stone from a distance. The prevailing colour of the exterior brickwork is red, with bands of yellow stocks, the arches of the windows being of red and black, and the windows of Ancaster stone. The principal front of the church, which faces the Ipswich-road, is surmounted by an octagonal bell turret. The entrances for the congregation are at this end, through the baptistery, which communicates with the nave by an arch. The columns to this arch and likewise the windows to the baptistery are of slate with stone caps and bands. The walls of the nave as far as the window-sills are of red brick; the upper portions principally of yellow stocks with bands of red. The seats in the nave are calculated to hold 148, and are entirely open. On the south chancel wall is placed a memorial brass with this inscription, "This chancel was built and decorated, and a portion of the nave also built by a fund raised to the memory of the Rev. James Thomas Round, A.D. 1863." The two painted windows on each side of the brass illustrate various offices of the ministry as set forth in the life of our Lord. In the lower medallion on the left hand of the brass is the Baptism of Jesus; in the upper, the Sermon on the Mount: on the right side of the brass the lower medallion represents the institution of the Holy Communion; and the upper one the charge to Peter, "Feed my sheep." In the heads of these two windows are angels bearing scrolls. The side windows of the sacrarium represent the four Evangelists, and the large east window the Ascension. Above all are three angels bearing scrolls. These windows are from the manufactory of Messrs. Heaton, Butler, & Bayne, of London. In the chancel arch and the arch for the east window are introduced small columns of English marble, red and green. The architect is Mr. Arthur Blomfield, of London. All the woodwork of the church has been executed by Mr. J. Seex, builder; and the brickwork by Mr. G. Crow, builder. The total cost is about 2,000*l.*

Renhold (*Beds*).—The parish church here has been re-opened. Amongst the improvements may be enumerated the removal of pent-up pews; the restoration of the north door, which was plastered up level inside, and the outer recess used as a receptacle for fuel; the removal of the font to its proper situation; and the removal of the pulpit from the nave window to its place by the chancel arch. The nave and aisle have been fitted up with open unstained deal seats, and the floor laid with red and blue Staffordshire tiles. The prayer-desk has been constructed of old open oak tracery found in the church. Three windows in the nave have had new mullions and tracery. The old pulpit has been re-erected, but upon a new base of oak. The east end of the nave has been entirely rebuilt, as the chancel arch was in a dilapidated condition, and the arch has been raised 1 foot 9 inches above the former height. The low 1 foot 9 inches above the former height. The low old plastered ceiling of the chancel has been removed, and a new open roof of corresponding pitch with that of the nave has been substituted. The floor is laid with Minton's encaustic tiles, and the kerb to the priest's step is of black marble. The windows of the chancel are new, and filled with crystal glass, with cathedral tinted borders. The exterior of the church has been freshly pointed throughout.

Woodstock.—The new Union Chapel and the cemetery for Woodstock have been consecrated. The workhouse chapel has been built by Mr. Franklin, of Deddington, for 495*l.*, which includes the necessary fittings. The stone was mainly supplied from the quarry of the Duke of Marlborough, and the plans were gratuitously furnished by the diocesan architect, Mr. G. E. Street, on one condition, that the building, if possible, should be consecrated.

Newbury.—The chancel of Newbury Church has been re-opened. The groundwork of the reredos is gold, with emblematical devices of the Four Evangelists and the Lamb, surrounded with a crowned monogram, "I. H. S." Carved on the south side of the chancel there are sedilia, with three panels; and on the north side a credence-table, with a carved canopy and finial. The panelling is of Bath stone, with alabaster, over which are ribbons with different texts. An archway has been thrown from the north vestry into the chancel, for the use of the choir. The steps are black marble, with encaustic tiles of various patterns, from Messrs. Maw, of Broseley. The roof is of oak, the pendants to the bonds being in carved work. On the exterior of the chancel, the walls and the gable end are enriched by a battlement of stone cornice, and a cross at the east end. The drawings for the above work were by Mr. H. Woodyer, of Grafham. The contractors for the whole works were Messrs. Adey & Son, builders, Newbury; Messrs. Wheeler & Sons, of Reading, for the stone work; and Mr. Biddis, of Newbury, the plumbing and decorating; Mr. Nicholls, of London, for the carving. Mr. J. Walker was clerk of the works. The cost of the restoration will amount to about 1,500*l.* The new window at the east end of the chancel has been constructed at a cost of about 200 guineas. The tracery of the window being in two compartments, the subject, of necessity, has been two-fold also; and the scenes selected have been the Crucifixion, and the Ascension of our Saviour. The whole has been executed in a slightly Conventional style. The window was designed and carried out by Messrs. Hardman, of Birmingham. The organ has been improved at a cost of about 220*l.*

Reading. — The first stone of All Saints' Church, Reading, has been laid on Downshire-square Estate, Bath-road, by the Bishop of Oxford, amid a large concourse of people. The edifice will be in the Decorated style. The plan consists of nave and aisles, north and south transepts, chancel, with aisles, tower, and spire, vestry, with heating chamber under. It is to be built of Pennant stone, with Bath stone dressings exteriorly, and the interior will be brick. The whole cost will be about 9,000*l.*, but only part is proposed at present to be carried out; viz., the chancel and aisles, transepts, and one bay of the nave, at the cost of 3,888*l.* The architect is Mr. J. P. St. Anbyn, of London; and Messrs. Wheeler & Sons, of Reading, are the contractors. The site in Downshire-square is the gift of the Conservative Land Society.

Windsor.—The Royal Chapel in Windsor Great Park has been consecrated. With a view to the convenience of the various servants of the Crown resident throughout the Park, Her Majesty has remodelled and enlarged this chapel, and has placed in the chancel a stained glass window as a memorial of her mother, the Duchess of Kent.

Hound (*Hampshire*).—A church is to be built at Sholing, in the parish of Hound. Houses are springing up in all directions, consequent upon the building of Netley Hospital, and of the Southampton and Netley Railway being about to run through the parish. Mr. Chamberlayne, the lord of the manor, has given a site of 2½ acres in extent, situate about a quarter of a mile eastward of Miller's Pond. It is proposed to erect the church in the Norman style of architecture, and capable of containing 500 persons. It will be so built as to be enlarged at any future period, if requisite. The required sum is 1,250*l.*

Tunstall.—The spire of Christ Church, Tunstall, has just been restored. In May last 18 feet of this spire were struck off by lightning. The spire has been rebuilt, and is 4 feet higher than it originally was; and, instead of the large iron sheath and cross which formed the terminal, a copper ball and vane have been substituted. Two scaffold poles were fixed for the raising of the stones, and a small stage screwed to the spire for standing upon to set the stones. This was all the scaffolding used, although very large stones were raised to a height of 115 feet. The four pinnacles which were damaged by a severe gale, and taken down several years ago, have been replaced. The contractor for restoring the tower and spire was Mr. George Frith, builder, Coventry; and Mr. Ralph Dain, of Burslem, was the architect.

Pontlottyn.—The new church of Pontlottyn has been consecrated by the bishop of the diocese. The church is in the Early English style of Gothic architecture, and contains a nave, north and south aisles, an apsidal chancel, a south chancel aisle, and a vestry, with a room for the heating apparatus underneath, also a bell-turret over the chancel arch. It is built of native stone, with windows and bands of red brick. The nave arcades have each three wide arches of red brick and Bath stone alternately. The pillars are of stone from the Bridgend quarries, the colour of which contrasts with the Bath stone. All the seats are open low benches. The pulpit is of Bath stone, circular, and having an open arcade with Bridgend stone shafts. Beside the font there is a baptistery provided for the immersion of adults. It is approached by steps and lined with Godwin's tiles. A large white cross of tiles is laid on the floor of the baptistery, going the whole length and width of it. The altar is of considerable size, and vested with a green frontal and a red superfrontal. The chancel is provided with choir seats, sedilia and credence table, and altar rails. The roofs are of open timber of stained and varnished deal. There are 349 sittings. The building was designed

by Mr. C. Buckeridge, of Oxford. The builders were Messrs. James & Price, of Cardiff. The cost was about 2,500*l.*

Blackpool.—Arrangements are in progress for replacing the temporary iron edifice for Christ Church with a permanent and more ecclesiastical structure. The new building is to occupy a site at the corner of Parker-street and Queen-street, near the existing parsonage. The accommodation will be for about 1,000 persons. The architect who has been appointed to carry out the work is Mr. J. M. Taylor, of Manchester.

Kendal. — The restoration of Kendal Parish Church is progressing. The whole of the roof over the inner south aisle, including that over the Strickland Chapel, has been restored, and is now quite finished. It is formed of Memel timber, and divided into equal compartments by nineteen principal rafters moulded and placed transversely, which are crossed longitudinally in the centre by a moulded purlin or rib. Every alternate rafter is supported at each end by a curved bracket (resting on freestone corbels), the lower ones terminating with turned columns, having octagonal caps and bases. Four common rafters occupy the space of each compartment: these are covered with plain boarding, which is itself finally covered with lead. The roof is stained of a brown oak colour and varnished. The buttresses on the south side, with one exception, and one on the east end of the church, have been, or are, in process of being renewed. It is now intended to proceed at once with putting in the masonry of the six south windows, and the one to the east looking into the Parr Chapel. The architect employed is Mr. J. S. Crowther (Manchester): the carpenters are Messrs. Fisher & Compton; the mason, Mr. John Stewart; the plumbers, Messrs. Winder & Gibson; and the stainers, Messrs. Jackson & Lyon, all of Kendal.

Hereford.—The small parish church has been restored. The whole of the work has been carried out by Mr. W. Ward, builder, Kington, at a cost of about 2,000*l.* Mr. Ward, according to our authority, the *Hereford Times*, had no architect to superintend the work. The old wood pulpit has been replaced by one of Bath stone, the gift of Mrs. R. W. Banks, Ridgebourne. It was designed by Mr. Drew, architect, London. The organ-loft at present is in a most unsightly position, entirely hiding from view the west window. Mr. A. H. Wall, of Burghill House, has offered to expend 200*l.* in filling this window with stained glass.

STAINED GLASS.

Thrapston Church (*Northants*).—The stained-glass window, which a large number of the friends and neighbours of the late Mr. John Yorke resolved to erect to his memory in Thrapston Church, has been completed. The larger decorated east window, of five lights, was selected for the purpose by the committee, and the glass has been executed by Messrs. Wailes, of Newcastle-on-Tyne, after a design furnished by themselves. The several lights of the window contain large groups of figures, representing different scenes connected with our Lord's passion, with lesser groups beneath, exhibiting subjects from the Old Testament, typical of those above them. The first light, commencing on the north side, sets forth our Lord's agony in the garden, with the comforting angel, typified beneath by Jacob's agony at seeing the torn and bloody coat of his son Joseph. The second light represents our Lord bearing His cross in the midst of the Roman soldiers, shadowed forth beneath by Isaac's bearing the wood for his own sacrifice. The central group is that of the Crucifixion, the three Marys standing at the foot of the cross, the type of which we have in the offering of Isaac. In the fourth is shown the Resurrection, and beneath is the drawing up of Joseph out of the pit. The Ascension occupies the upper portion of the fifth light, having underneath the taking up of Elijah into heaven. The tracery of the window is reticulated, and each portion of it is filled with the figure of an angel, those immediately above the principal lights bearing the instruments of the Passion, and, over these, others, carrying scrolls.

Bradford Parish Church. — A stained-glass window for the parish church of Bradford, Yorkshire, has been completed by Messrs. Morris, Marshall, Faulkner, & Co., of London. It is a seven-light perpendicular window, with the usual tracery, and divided by a transom. In the centre light above the transom is a "Majesty"—the Saviour in glory, with attendant angels. Below the transom comes a large figure of St. Peter. The other six lights are arranged in four rows, making a total of twenty-four single figures, in the following order, beginning from the upper left-hand corner:—First row: St. Elizabeth, with her son, the youthful Baptist; Anna the Prophetess; the Virgin Mary; Mary Magdalene; Martha; Mary, the sister of Lazarus. Second row:—St. John the Baptist; the Four Evangelists; St. Paul. Third row: Abraham preparing to sacrifice his son; Isaac; Jacob; David; Solomon; Joseph, the husband of the Virgin Mary. Fourth row: Moses; the Four Major Prophets; Elijah. We have thus—to reverse the order—firstly, the Jewish lawgiver, and other prophets of the Old Dispensation; secondly, an abstract of the lineage of Jesus; thirdly the forerunner and the great Apostles of Christianity; and lastly, the female saints most immediately connected with the Saviour. These surround the "Majesty" and the figure of Peter, the saint to whom the church is dedicated. The tracery, moreover, represents, in its larger openings, the four Archangels, Angels, Cherubim and Seraphim.

Holy Cross, or St. Crux Church, Pavement, York.—A stained glass window has been painted for the east window of the north aisle, by Mr. J. W. Knowles, of York, and has been erected in its place. The window is of three lights, with tracery above, and the subject is "The Ascension." It has been designed so as to fill the whole of the lights, thus forming a complete picture, without the accessories of canopies, &c. In the tracery pieces are conventional designs of various plants, coloured so as to give effect to the subject underneath.

Butlers Marston Church (*Warwickshire*).—Alterations have been made on the east window of this church: the old stonework has been taken out and replaced by an entire new window, which has been filled with stained glass, in ornamental patterns, with a figure of our Saviour in the centre, and emblems of the four Evangelists in the side lights. the tracery consists of angels, I.H.S., dove, &c., upon vine backgrounds. The whole was executed by Mr. Holland, of Warwick.

Gainsborough Church.—A stained glass window has been placed in this church in memory of the late Rev. C. S. Bird. The subject is "Christ teaching." The artists were Messrs. Clayton & Bell, of London. There are about a dozen figures represented. The group occupies a central position in the window; the space above and below, which is considerable, being filled up with designs.

Bitchfield Church, Corby (*Lincolnshire*). —A two-light stained glass memorial window has just been erected on the north side of the chancel of this church, by Lady Clarges, of London, and was executed by Messrs. Thomas Baillie & Co., of London. It contains the figure of Our Lord as the Good Shepherd, in one opening; and in the other, Our Lord the Bread of Life: each is surmounted by a canopy.

Trinity Church, Richmond (*Yorkshire*).—A subscription has been set on foot amongst the former pupils of the late Rev. James Tate, for the purpose of inserting a window in memory of him in this church.

Patterdale Church.—A memorial window of two lights, with cinque-foil above, has been placed in the south side of the chancel in Patterdale Church, Westmoreland, to the memory of the late Mrs. Rooke, by her brother, Mr. E. A. Bromehead, of Woodlands, near Keswick. The first light contains "Mary at the Feet of Jesus;" the second, an angel on the empty tomb, proclaiming, "He is risen." The cinque-foil is filled with the triple Tau, in dark ruby on a purple field. The glass was executed by Messrs. Ward & Hughes, of London.

British Church (*Pietre Maictzbury, Natal*).—A memorial window to Charles Frederick Mackenzie, M.A., first bishop of Central Africa, has been placed in this church. The figure of Bishop Mackenzie in his robes is introduced,—his right hand extended as if invoking a blessing, his left holding a crozier. The whole is surmounted by a canopy with lily crocketing, terminating in a cross, with gold rays on a blue ground. The inscription is in Latin, and occupies a cruciform shape in base. The work was done by Messrs. Ballantine & Son, Edinburgh.

PROVINCIAL NEWS.

Wymondham (*Norfolk*).—The market cross is undergoing a complete restoration. The thick coating of plaster which has long disfigured it has been removed, and thereby the original doorway, windows, and studwork have been brought to light. The upper part of the building has been restored to the perpendicular, from which it had declined. The octagonal room over the cross is intended, as we are informed, to be fitted up for a public reading-room.

Presteign.—The foundation-stone of the new Market Hall and Public Room, at Presteign, has been laid by Lady Brydges. The buildings in course of erection comprise, on the ground-floor, a poultry and general market, arcaded on the two sides fronting the principal streets, a retiring room for gentlemen, a vestibule, corridor and staircase leading to the assembly-room. The upper floor contains an assembly-room, with an orchestra receding therefrom, and retiring-rooms for ladies and for performers. Over the vestibule there will be a clock-tower, surmounted by a bell-cupola, the whole reaching to the height of 60 feet. In style the buildings are Venetian Gothic, ornamented with decorative string courses and an intermixture of polychrome brickwork. They have been designed by, and are being carried out under the supervision of, Mr. T. Nicholson, of Hereford, architect.

Ruthin (*Denbighshire*).—The foundation stone of the Ruthin new Market-hall and Corn Exchange has been laid. The new buildings, which will occupy a prominent position on entering the town, are to be erected upon a site in Railway-street, having a frontage thereto of 126 feet, and extending the full depth of the site. The basement floor will contain extensive cellarage, a portion of which is to be converted into an armoury for the Ruthin Rifle Volunteers, with a residence for the hall porter. The ground floor will comprise the Corn Exchange, News-room, Council Chamber, Town Clerk's Office, with lavatory and entrance porch. The market, covering an area of about 50 square yards, will contain all requisite shops, stalls, and standings for the various trades frequenting a mixed market. The roof, in one span, open to the ridge, will be 36 feet in height. On the front floor there will be an assembly-room, 64 feet by 32 feet, and 30 feet high, capable of accommodating 600 persons, with retiring-rooms, and two staircases. The assembly-room will be lighted by three large windows in front, and six on side elevation. The roof, which will have a light appearance, is to be polygonal in outline, broken into panels by moulded ribs, the whole resting on a carved cornice and wall level. The exterior will be a free adaptation of Continental Gothic. The ground story is to be composed of arches, within which will be the windows to the Corn Exchange, and the main entrance porch, and above the latter will rise the clock-tower, 75 feet high, having a pyramidal roof and ornamental cresting. Symbolic sculpture will be used in the tympanum of the window arches, &c. The general facing of the walls will be composed of coursed pitch-faced masonry, the material being a purple-grey stone obtained in the locality. Minera stone will be employed for the arched stone-work, with the native blue stone and limestone for the centre bands, &c., and polished granite shafts for the doors and windows. The contractors for the entire works are Messrs. Holland & Roberts, of Ruthin, from the plans and under the superintendence of Messrs. Poundley & Walker, architects, of Kerry, in Montgomeryshire, and Liverpool.

Stirling.—It is now nearly two years since the Royal Bank purchased two old tenements in King-street, for the purpose of erecting new offices on their site. The edifice has been built according to plans supplied by their architects, Messrs. Peddie & Kinnear, Edinburgh. The building is four stories in height. The ground-floor consists of the bank office, extending from the centre, and occupying the upper portion, while the lower portion is a shop, and immediately behind which, and on the floor, is a saloon, extending back a distance of 60 feet, and 20 feet wide, having a curvilinear roof, formed into equal panels and roof-lights. The façade is of a Grecian character. The bank-door is placed in the centre of the elevation on the ground-floor, and is surrounded with architraves, having carved trusses supporting a cornice, with frieze enrichment between the trusses, all having a suitable projection from the line of the wall. The windows of the bank-office and entrance-door to staircase are treated together, being slightly recessed from the line of the wall, and separated by pilasters, with bases and moulded caps. The whole work has been under the superintendence of Mr. T. B. McFadzean.

Dublin.—The plot of ground lying south of the Hardwicke Fever Hospital, and adjacent to North Brunswick-street, recently purchased by the proprietors of the Carmichael School of Medicine from the governors of the House of Industry Hos-

pitals, for the erection of new buildings in connexion with the school, has been formally handed over by the Commissioners of Public Works, in whom the premises were vested, to the proprietors of the school and the board of governors of the hospitals. The late Surgeon Carmichael had by his will provided a fund to enable the proprietors of the school which bears his name to erect this building.

PORTLAND AND ROMAN CEMENT.

If we knew the building to which "Cautious" refers, we might be able to offer explanations that would be satisfactory to him; but it is not necessary. We prefer rather to take the statement as we find it, and to assume that in the course of four years we have made and issued some cements which either from inherent defects or from misuse have failed of their intended end.

So far from this being surprising or not likely to recur, we think it highly probable that in view of the thousands of tons of Portland cement now annually made and used, accidents of a like nature may often happen.

If they are of too frequent recurrence the cement will lose its reputation and be discarded; but it would be as unjust to pronounce this condemnation on account of occasional failures as it would be to proscribe evermore the use of the freestones because Buckingham Palace, the Borough-road Training School, and part of the Catholic cathedral of St. George's, built with Caen stone; or Henry VII.'s Chapel, built with Bath stone; or the Palace of Westminster, built with Anston stone; have become so disintegrated as to require in some cases to be painted, and in others to be covered with chemical washes to arrest further decay.

The map-like cracks referred to by your correspondent, known by workmen as "fire cracks," and which are all but inseparable from every lime cement, proceed from a very slight contraction in drying, generally under the influence of a hot sun. Unsightly they are; but not dangerous to the stability of the work, since they are only skin deep.

In Portland cement, which is generally left without colouring, they are more perceptible than in Roman cement, though they exist in that material under the washes and paints which are needed to hide its uncomely natural colour, as may be seen in Belgravia, whose "rows and streets," it may gratify "Cautious" to know, were stuccoed a generation ago with Roman cement or mastic years before Portland cement was "born or thought of."

If the builders of that day are still living, they can tell us whether Roman cement was uniformly a success, or whether between the months of October and April King Frost did not play havoc with their work, and cause it to bulge and peel in very unprofitable fashion.

As makers of cement it is not our wish to malign those who work it; but we suspect "Cautious" has hit the cause of most of the failures when he tells us that plasterers generally finish with a skimming coat as thick as half-a-crown, which is killed by excess of trowelling, and then peels off under the first hot sun or shower of rain. For this evil he suggests the proper remedy.

In conclusion, we presume not to dictate to the public which cement it should prefer, or to assert dogmatically the superiority of one sort to another. We have a strong conviction based upon theory and supported by evidence, that Portland cement is the most enduring, and, therefore, the most economical material of its kind ever invented; but if that opinion be not shared by "Cautious" and by the building profession generally, independent appeal may profitably be made to the engineers of the Board of Works, or to some of the eminent builders of the metropolis, who largely use, and can intelligently appreciate the difference between the two cements. They can afford to be quite impartial in the matter, and it may well be left to their experience to say whether the artificial cement called Portland does or does not present in its composition and uses the aspect of durability, or whether after ten years of progressive entombment the natural or Roman cement should really "rise again" and take its place.

J. B. White & Brothers.

British Archæological Association.—At the first meeting, Wednesday November 25th, at half-past eight p.m., papers, will be read "On Unpublished MSS. relating to Meaux Abbey," by Mr. E. Levien; and "On the Roman Roads mentioned in Antonine's Itinerary, as leading to and from Colchester," by Mr. H. Jenkins.

VENTILATION BY THE SASH.

In 1849 or 1850, I sent a small model for the top rail of a sash, showing my system of ventilation, and a description thereof, to the Society for the Encouragement of Arts and Sciences. On the description I call it "The Permanent Ventilator for the Palace or the Cottage," and it may be seen at the Society's house, John-street, Adelphi, in their museum. As it was so simple, I did not think it worth a patent, or even registering. Where there are not two windows in a room, a mere block to support the top lath, which fixes the wire gauzes, gives a perfect action to one sash; and the imperfect fitting of the middle rail or the door to its case, produces in most cases a sufficient supply of air to give an imperceptible current without causing a draught. In case of more air being required, it should be admitted not lower than the architrave over the door. Any lower apertures are objectionable on sanitary grounds. This mode of ventilating I proposed some twenty-five years ago.

R. Dennis Chantrell.

ROOM FOR AN ARCHITECT.

Sir,—I desire to call the attention of young architects, through the medium of your paper, to the fact, that we are, in this town, Stockton-on-Tees, and neighbourhood, without a resident architect. As we have a population (including South Stockton) of some 20,000 inhabitants, I consider this a state of things requiring a remedy. To show you there is a probability of occupation, I must state that the town is growing remarkably fast, which statement is confirmed by the fact that, at a meeting held last week, our retiring mayor publicly stated that, during his mayoralty the Board of Health had sanctioned plans for fourteen new streets, and 276 new houses: these were in Stockton alone; and more were passed at the last Board of Health meeting, on Friday last. In South Stockton, which is only separated by the River Tees, and where a Board of Health has just been formed, things are equally prosperous, and new houses springing up in all directions: the same may be also said of the north side of the town.

A Stocktonian.

LIGHT AND AIR.

Lee v. Strand Music Hall Company.—The plaintiffs, Mr. W. Lee, Mr. J. Jerdein, and Mr. J. Jerdein, jun., who carry on the business of coal merchants under the style of the Guinea Coal Company, complained by this bill that the defendants, whilst proceeding with the erection of their hall, had demolished the roof of the house No. 17, Wellington-street, in which the plaintiffs have an office; that they had put in jeopardy the lives of those who had to work in the office; and that they had put up scaffolding which impeded the approach to the office. The plaintiffs, therefore, asked for an injunction to restrain the defendants from damaging or removing any part of the house No. 17, Wellington-street, and from continuing any erection whereby the access to the plaintiffs' office was impeded. They also asked the Court to award damages for the injuries they had sustained.

Mr. Malins and Mr. Osborne Morgan were counsel for the plaintiffs.

Mr. Greene and Mr. George Murray, the counsel for the defendants, offered to pay to the plaintiffs 50*l.* in satisfaction of their claim, without prejudice.

This offer having been refused,

The Vice-Chancellor (Stuart) ordered that inquiries should take place in his chambers to ascertain what damage or injury had been done to the plaintiffs by the defendants' acts.

Miscellanea.

Fall of a Bridge.—A wire bridge over the Hawick Railway at Hassendean Burn fell across the rails, just before a train came up. To clear a passage the engine was detached from the train and attached to the broken bridge. By this means the obstruction was quickly drawn out of the way and the train allowed to proceed.

New Bridge at Peebles.—An iron suspension-bridge of one arch, the length of which is about 120 feet, has recently been erected near the Tweed at Crownhead, Stobo, opposite the grounds at New Dalwick, the property of Sir John Naysmith, of Posso. The expense of its erection is to be borne partly by the Broughton and Peebles Railway Company, who are to have a station near it, and partly by the landed proprietors of the district. Formerly at this point there was only a ford, with a wooden bridge for foot passengers, the approach to which floods often rendered impassable during winter.

Strange Accident.—At Langley-mill, near Eastwood, the wife of a farmer went out to close the shutters. To get to the window she had to pass down the garden, where, underneath the pathway, there was a cistern arched over with bricks. As his wife did not return in a few minutes, the farmer went out to close the shutters himself, and in going down the path he stumbled and fell into the cistern, but scrambled out, and, obtaining assistance, his wife was found at the bottom of the cistern, which was 9 feet deep of water, quite dead. It is supposed that the arch had fallen in shortly before the deceased went down the garden; and it being quite dark, there was no doubt she fell in as her husband did. The coroner's jury returned a verdict of "Accidental Death."

The New Mayor of Rochester.—Mr. Alderman Naylar, well known in that locality as a builder and contractor,—a man who has built up his own fortune and reputation with little extraneous scaffolding to aid, and who, moreover, is not ashamed that this fact should be known,—has been elected mayor for the ensuing year. The *Chatham News* gives an account of the election and dinner.

Gerish's Mortising and Drilling Machine. Messrs. Gerish & Weston have recently patented an improved machine for drilling and mortising wood, principally intended for manual labour, although it can be driven by power if required. When worked by a man, the motion is given by a treadle, where the whole weight of the body can be applied without any inconvenience, and the hands left at liberty. The chisel is a contrivance for bringing the stuff out when cut: it will bring out two-thirds of the cut, it is said, at each stroke, and the remainder will fall out, requiring no core-driver, and consequently effecting a very great saving of time and expense.

The Dwellings of the Poor.—At a meeting of the clergy and lay consultees of the rural deanery of Amesbury, in the diocese of Salisbury, the following points were considered in reference to the dwelling-houses of the labouring poor; namely, 1. The great need of improvement generally in the accommodation provided in the houses rented by labourers; 2. That this matter was not to be regarded as a question of profitable investment, but as a question of morality, affecting the well-being of the nation; 3. That while the home of the labourer continues to be what so many of their houses now are, it is very doubtful what good can be done by the most careful teaching in church or school; and it was resolved to communicate with the bishop with the view of obtaining a better consideration of the subject throughout his lordship's diocese.

The New County Hospital at Winchester. The plans for the new hospital at Winchester are now in the custody of the secretary at the hospital. The general form of the design is that of a central building with wings. The position which the architect has assigned to the chapel on the second floor of the east wing is said to be such as to enable him not only to produce a more effective and conspicuous memorial of the late warden of Winchester College than could have been accomplished by the limited amount of the subscriptions for that purpose (about 700*l.*), if it had been expended on a separate and necessarily insignificant building, but also to make this memorial improve the general appearance of the hospital. The building will contain 110 beds, or 112 if need be, and there will be 1,560 cubic feet allowed to each patient in the large wards, and a still larger proportion to those occupying the small wards. The building committee have decided that the best interests of the hospital required not an attempt at planning improved day-rooms, but their total abolition. In their report they had given their reasons, and the authority on which they have proceeded. Miss Nightingale is said to have remarked that the building committee were to be congratulated on having received from Mr. Butterfield a plan for a model hospital.

Mummies at Thebes.—The late Mr. Henry Rhind, as we noticed while reviewing his book on Thebes, opened a tomb there, in which, with two bodies, were papyri, or narratives written on the papyrus leaf. Fac-similes of these have just been published, and the *Reader*, in noticing them, says,—"The text gives some curious details of the process of embalmment. It seems that Sebauf, the occupant of the granite sarcophagus, was, amongst other things, 'boiled in 206 jars of salt,' a treatment more calculated to insure his remains against the depredations of moths and worms than the possession of the Hermetic book and the numerous amulets which were rolled up amongst the wrappages, and which were supposed to have this virtue. Bitumen and frankincense from Arabia are also mentioned as being extensively used. The complete time of embalmment occupied seventy days in the period to which these mummies belong. The lady Taani did not, however, live to complete all the ceremonials of mourning for her husband. She lamented him forty-eight days, and then herself followed him to the tomb. These papyri do not add much to our previous knowledge of the ideas of the Egyptians as to the state of departed spirits; but they illustrate some remarkable points. First, they prove that the religious system of Egypt at this late period was substantially identical with that which is known to have existed in the earliest times of which we have record."

PROPOSED NEW HALL FOR ODD FELLOWS AND FORESTERS.—At a crowded meeting of the members of these societies held at the Council Chambers, Ipswich, on Friday evening, it was unanimously resolved to erect a hall for the use of the two societies, by means of a company of shareholders representing a capital of 3,000*l.* under the Limited Liability Act.

TERCENTENARY OF SHAKSPEARE.—The design for the temporary Pavilion, at Stratford-upon-Avon, for the Shakspeare Tercentenary Festival Committee, has been made by Messrs. Thompson & Colbourne, architects. The following tenders for its erection, exclusive of decorations, have been received:—

Eassie & Co. Gloucester	£2,449
G. Clarke & Son, Wootton Wawen	1,799
Jas. Cox, Son, & Holton, Stratford-on-Avon	1,475
Branson & Murray, Birmingham (accepted)	1,300

FOUL AIR IN CISTERNS FROM WATER-CLOSETS. About two years ago correspondents of ours called attention to the evil arising from the custom of water-closets being connected and served with water from the general cistern. A double or separate cistern was proposed; but probably not many, except perhaps in first-class dwellings, followed that advice. A correspondent, "R. F. C.," therefore proposes the following plan:—The pipe serving the water-closet with water, instead of having its upper end inserted in the cistern, should be continued and carried up outside the same for about 2 feet higher than the top of the cistern, the upper 2 feet being slightly bent and the end of the pipe left open; the connexion between this pipe and the cistern to be by means of a short piece of pipe, one end connected to the bottom of the cistern and the other jointed into the one from the closet by a joint at a point about 9 inches or 12 inches above its entrance into the cistern.

WHO IS LIABLE TO PAY FOR OXFORD-STREET? At the last weekly meeting of the Marylebone vestry, the vestry clerk read a report from the parish solicitor, announcing that after nearly five years' litigation the Court of Queen's Bench had given a final judgment against the authorities of St. Ann's, Soho, as to their liability to contribute to the maintenance and repairs of Oxford-street. The maintenance of Oxford-street costs 4,000*l.* per year, of which it was contended the parishes on the south side, St. James's, St. George's, and St. Ann's, were liable to pay one-half. St. Ann's refused to do so on the plea that their parish only extended to the frontage of the houses. Upon this point, in a trial at law, they were defeated, a map of their own being produced, which showed their boundary came to the middle of Oxford-street. A new trial was, however, obtained upon special points of law; and the judgment being on all points against St. Ann's, the authorities of that parish have now to pay over to the vestry of St. Marylebone about 1,500*l.*, and the costs, which amount to several hundreds more. The report was ordered to be received and entered upon the minutes.

EXPERIMENTS WITH A NEW SUSPENSION BRIDGE.—Some trials of an interesting character took place on the Royal Engineers' field-works, Chatham, on Tuesday last, in the presence of a large number of officers, for the purpose of testing a new description of suspension-bridge, for military purposes, the invention of Sergeant-major J. Jones, Royal Engineers. The bridge on which the experiments were made was formed of the galvanised iron bands with which the new description of iron gabions now in use in the service are formed. These bands, which are about 3 inches in width, and the thirtieth part of an inch in thickness, were joined together at the end, by means of a button and eye; and, notwithstanding the apparent slenderness of the material, bore an enormous weight. Eight widths of the iron bands, each four bands thick, formed the "chains" of the suspension-bridge, and on these were laid the chesses, used in pontooning, which served as the floor of the bridge, the whole being steadied by means of guy ropes, fastened to stakes, answering to anchors in a river. With these materials a bridge having the enormous span of 130 feet was formed by thirty Sappers and Miners in six hours. A battery of mounted field artillery was marched across with the greatest ease, the bridge having only a very slight oscillation. A body of about thirty Royal Engineers were next marched across, in step, and this was the greatest strain to which the structure could be put. Notwithstanding this, however, the only perceptible defect was the great oscillation of the bridge, which ultimately loosened one of the guide ropes.

THE MIDDLE LEVEL.—It appears from the accounts for the financial year ending April 6, 1863, that the sum of 86,651*l.* was disbursed during that period,—57,744*l.* in reference to works consequent on the failure of the out-fall sluice. A leakage and some disturbances at the syphon dam and works have lately occurred, and Mr. T. E. Harrison, C.E., came down for the purpose of making an examination with Mr. Lunn, the resident engineer. Mr. Lunn has given directions to have some puddle prepared, and the men employed will open out as far as they can the course of the water, and will then fill the excavated space in with puddle. It appears from the accounts that in the commissioners' last financial year the amount taken up on loan was 71,000*l.*, the bonded debt of the commission being thus increased to 461,000*l.* The amount paid for interest was 16,693*l.*, and the sum received in taxes was 24,691*l.*, while the other ordinary accessory receipts of the year were 820*l.* A temporary loan of 20,000*l.*, contracted in 1862-3, has been paid off.

MANCHESTER UNITY OF ODD FELLOWS.—The nineteenth anniversary of the Loyal Cambridge Lodge has been celebrated at the Clanricarde Hotel, Paddington. Mr. Pitt occupied the chair. P.P.G.M. Harris stated that, in January, 1862, there were 335,145 members; but, owing to the distress last year in the manufacturing districts, the increase had not been equal to previous years; nevertheless, 24,276 were admitted during that year; and at the present time, from the returns made, there are 370,000 members in connexion with the Society. From the returns made by the three largest districts,—namely, North London, South London, and Norwich,—these comprised 20,859 members, with a capital of 164,429*l.* 15s. 4½d., averaging nearly 8*l.* per member, or at the rate for the whole Society of two millions and a half of saved capital. The secretary, Mr. Stevens, stated that the expenditure for the past year had been 120*l.* 7s. 6d.: the receipts had amounted to 239*l.* 14s. 9½d., leaving a profit of 119*l.* 7s. 3½d., and making the present value of invested capital 1,958*l.* 1s. 4½d. In alluding to the *Times* article as to the insolvency and abuses in Friendly Societies, he said that the Manchester Unity had for years paid graduated rates of contribution, compiled by an eminent actuary from the experience of one million years of life. The assets and liabilities of this Lodge were periodically valued by an actuary, and they were found perfectly solvent.

MONUMENTAL.—The Guards' Crimean Memorial, in Trinity Church, Windsor, is nearly completed. A gallery runs round three sides of the edifice, the front panels of which have been covered with the names of soldiers,—officers and men, side by side, many of whom had attended the church where their deeds are now recorded. The names are painted in coloured letters on a gold ground. Some of the officers' tablets are ornamented with the coats of arms of the deceased, while the names of the various battles recur. Beneath these panels, full of names, the texts which, we are informed, her Majesty has herself selected, have, with the exception of a small portion, been inscribed in highly ornamented letters, commencing at the chancel end of the south gallery, and extending right round the church. These texts consist of the 7th and 8th verses of the 4th chapter of the 2nd Epistle of Paul to Timothy, the 12th verse of the 6th chapter of the 1st Epistle to Timothy, and the 1st and 2nd verses of the 12th chapter of the Epistle of Paul to the Hebrews. There will be a scroll border beneath the Queen's texts, decorated with gold oak and laurel leaves, on a blue and brown ground. The roof of the chancel is also being decorated with blue and gold work.——The monument to the Duke of Richmond, at Huntley, is now completed. His grace is represented as colonel of the Sussex militia. The figure (in Redhall freestone) is erect, and 9 feet high, and the pedestal is 12 feet high. The sculptor was Mr. Alexander Brodie, of Aberdeen.——The *Times* Dublin correspondent reports the uncovering of the statue of the late Lord Plunket in the hall of the Four Courts, Dublin. The statue, which is of white marble, represents the statesman not robed as Lord Chancellor, but as a speaker in the act of addressing the House of Commons, with a dress-coat cut after the modern fashion. This, with the closely-fitting knee-breeches, gives the statue a bare appearance.——The new statue of the Emperor Napoleon I. has been raised to the top of the columns in the Place Vendome.——The *Reader* says that a fund is in course of being raised for the erection of a memorial in honour of the late Edward Bache, the composer.

THE PORTSMOUTH SURVEYORSHIP.—Mr. Lewis Angell, C.E., surveyor under the Board of Works for the Wandsworth District, has been elected to the surveyorship of the borough of Portsmouth.

PETROLEUM GAS.—A correspondent of the *American Gas Light Journal* says:—The laws governing the destructive distillation of petroleum and its distillates are the opposite of those so successfully applied to the manufacture of coal-gas. They are as follows:—1st. Graduation in the application of the heat, in order to vaporize the oil only as fast as the means provided to convert the vapour formed into gas, can so act upon it. Otherwise there must be great waste of material. 2nd. As on the one hand to convert vapour into gas requires its actual contact with red-hot iron, and on the other such contact, if continued, again decomposes the gas (the cause of the carbonaceous deposits so often found in gas retorts, and which come from the destruction of gas, not vapour or tar, as many may suppose), the apparatus must be so arranged as to compel the vapour in its passage out of the retort to come into actual contact with its red-hot surface, and while in such contact to travel so rapidly as to leave little or no time for the decomposition of the gas. When treated according to these laws, petroleum will yield to the gallon 125 feet of gas of surpassing richness, and there will be no clogging in the pipes or deposit in the retorts. But, to make the manufacture profitable for gas companies, a third condition is required, to wit,—Dilution of the gas to secure its combustion without smoke, and enable it to be sold at the prices charged for coal-gas. This condition is fulfilled by distilling the oil in connexion with wood. The results obtained when it is so treated are these:—There are from each gallon of petroleum, or of petroleum tar (for experience shows that when treated with wood, the tar, although so much cheaper, answers as well as the oil), and 155 feet of hard wood, 300 feet of gas of equal illuminating power with coal-gas, and 1¼ bushel of good clean charcoal, with the cost of the wood, and therefore leaving the entire yield of gas, so far as cost is concerned, from the tar or oil used. Of course, when so much of the gas comes from the wood, less heat is required than is used for coal, and there cannot possibly be any clogging of the pipes.

GAS.—A further reduction in the previously low price of gas in Walsall has been determined on by the local gas committee, the gasworks in Walsall being the property of the town, and managed by the Improvement Commissioners. A report of the committee, read at a special meeting of the Commissioners, stated that "during the year which ended on the 30th September last, the profits made, after deducting the annual instalment in reduction of the debt, have been such as to provide for necessary and considerable outlay, for extensions and increased accommodation, without borrowing; and also to pay off, without re-mortgaging, a mortgage debt of 1,150*l.*, which fell due in the month of September last. This result has been obtained in a year during which the price of gas has been lower than ever before known in Walsall, and considerably lower than in many neighbouring towns, and lower than in any other town in the midland district of England." After pointing out the interest the inhabitants had in supporting their own gasworks, the report proceeded,—"Your committee have to recommend that as from the 1st of October inst. the price of gas be reduced to the following scale:—viz., 2s. 10d. per 1,000 cubic feet, to consumers of less than 25,000 cubic feet per quarter; 2s. 8d. per 1,000 cubic feet to consumers of 25,000 and less than 100,000 cubic feet per quarter; 2s. 6d. per 1,000 feet to consumers of 100,000 cubic feet per quarter and upwards." The committee will also supply gas for the lamps at the rate of 2s. 4d. per 1,000 cubic feet, or 2*l.* 14s. 6d. per lamp per year. The report added, that if the present reduction should be followed by an increased consumption, the price of gas may undoubtedly be further reduced in October next!——Gasworks have been opened at Brightlingsea. The expenditure actually incurred has been about 2,000*l.* for works somewhat larger than were originally contemplated, in order to meet an increase of consumption in future years without the heavy expense of additional buildings. The works are situate at the bottom of Sidney-street,—a new thoroughfare leading to the Hardway. The iron gas-holder will contain 9,000 feet. The works were designed by, and carried out under the direction of, Mr. Church, the engineer. The contractors for the buildings were Messrs. Gull & Lake, of Brightlingsea; and the apparatus, machinery, and mains, were supplied by Mr. Cliffe, of Huddersfield.

York City Walls.—The town council has determined that in future the rents received from the moats and ramparts (260*l.* per annum) shall be applied towards the gradual repair of the walls. The local *Herald* proposes to raise a sum of money at once on these rents, and thoroughly and at once put the walls into a state of repair. The restoration of the walls on the Micklegate side of the river has been already effected at a cost of from 2,000*l.* to 3,000*l.*; and, as the distance between Bootham Bar and Layerthorpe Bridge is considerably less than the Micklegate walls, it is assumed that a much less sum of money would suffice.

The Great Bell of Westminster Palace. "Big Ben," though as cracked as before, is once more on duty, telling the hours nearly as well as ever he did. His sound, though *not* quite sound, and rather more gongy than it was, is so far even improved, inasmuch as heretofore his excessive vibration, after two or three strokes, interfered with the stroke which followed in such a way as partially to smother, as it were, every third or fourth toll; whereas now, on the contrary, there is no such interference, and every stroke takes due effect, so that his tones are all alike distinct. The crack, it is said, has been found to be not so serious as was supposed; not passing quite through the metal. Though a little eccentric, therefore, crazy "Ben" may long send his long tongue booming over the metropolis.

Proposed Victoria Cross Gallery.—We are glad to see a suggestion in print for the purchase of the pictures painted by Mr. Desanges, to illustrate the varied deeds of the Victoria Cross heroes, pictures that have the value of truth irrespective of their artistic merits, as being composed according to minute descriptions detailed by the actors themselves, including also their portraits. "The noble deeds of the Victoria Cross heroes, when once recorded in the *Gazette*, run a great chance of being forgotten and crumpled up along with the paper itself, being too long for insertion elsewhere. But this small collection of pictures affords us an easy opportunity of publicly prolonging their deeds." The purchase of them, fifty in number, though it might be formidable to an individual, would be an unfelt trifle when effected by the combination of many. The sum expected by the artist is really small for a great public purpose of lasting utility. A very small contribution from all now in the services would suffice. Civilians also, being included in the order, might gracefully contribute their mite. The suggestor invites communications and aid, addressed to R. T., Junior United Service Club.

Lecture on German Art, at Bristol.—Mr. J. B. Atkinson recently gave a lecture at the Philosophical Institution, Park-street, Bristol, on "The Revival of Art in Germany: the Schools of Munich and Dusseldorf." The audience was large and appreciative. In introducing the subject, Mr. Atkinson said he had chosen the Revival of Art in Germany for two reasons—primarily, because in modern times, few, if any, movements could show fruits more ripe and abundant; and, in the second place, because this attempted national regeneration would afford them the opportunity of reviewing those essential laws and principles which, belonging to all time, circumscribed by the limits of no one country, were inherent to the life and the growth of every true art. The topic was so far-reaching, that at the outset boundaries must be prescribed. Let it be understood, that of all the arts painting was the only one which the time allotted to a single lecture would enable them to discuss. For the present their landmarks must be these: they would, as a starting point, take a survey of those forces, destructive or creative, which went to form the new birth: they would then enumerate some of the leading masters and characteristic works of the school; and lastly, such time as might remain should be devoted to a critical estimate of the merits and failings which had marked this ambitious attempt to raise in Germany the standard of high art. The lecturer's remarks to the effect, that the modern German school is the joint product of the early Italian and early German, were illustrated by three engravings from the works of the respective schools. The first was the well-known head of Raffaelle, painted by himself, at the age of eighteen, when he might be said to belong to the pre-Raffaellites; the second, the head of Albert Durer, strong and grotesque, and so characteristic of his own style of art; and the third, the head of Overbeck, combining much of Raffaelle's spirituality with something of Durer's power.

How to Prevent an Echo.—Sir: Believing with your correspondent, Mr. J. Edmeston, that the cause of the echo, in the cited instance, is the roof rising at an angle of 45 degrees, I would make a suggestion. Let a cloth, no matter how thin, be hung from or rather nailed closely to the apex of the roof completely along the room, closely fastened to each end wall, and to hang as low as the springing of the roof.—W. J. D.

Swansea Water Works. — Mr. Rawlinson writes that he was misunderstood as to what he said at the opening of these works,—"I did not mean to imply that an abundant supply of pure water alone would necessarily reduce the Swansea death-rate. I knew that Swansea was being sewered and drained, and intended to say that all the sanitary works in connexion would tend to a reduced death-rate, as in Salisbury, in Ely, in Worthing, and in other places." Instead of "23 in the thousand," the report has erroneously "23 *per cent.* in the thousand." The correct meaning, however, is obvious.

The Forms of Ships.—It has generally been considered that great progress has of late years been made in improving the forms of ships; but, if Captain J. E. Cole, of New York (not Captain Cowper Coles, of the Cupola ships) be right, the old broad flat-bottomed vessels, only a little more rounded perhaps, like the side (not the belly) of a salmon, is the best shape after all. In a pamphlet titled "A Criticism on the Form of Ships" (Blight, printer, Fenchurch-street), he maintains that, while a ship is making way, the displaced water passes under her bottom, not along her side; or she rides over it rather than cuts through it; and he gives various seamen's reasons for this opinion, which seem to have some force in them. This, however, is not a subject into which we can enter, although we think it of sufficient importance to make a note of it. Are we about to come back to something like the Chinese junk as our model in naval architecture? Of course, Captain Cole has stability as well as speed in view; but surely the broad round bottom is not the beau ideal for speed? Yet what are our swift racing skiffs but round-bottomed canoes, on the very old Indian model?

Arsenic in Paper.—This poison is principally employed in trade to produce a peculiarly vivid and showy shade of green. It is not a natural green, and neither represents the green of trees, of plants, nor of grass. On account of its brilliancy and attractiveness, it has superseded the less decided tints of nature. The form in which it is generally employed in this country is that of a green powder, which is commonly known as "emerald green." It is known to chemists and writers on science as "Scheele's green," after its discoverer. Another kind is also called "Sweinfurth green," from a town in Franconia, where it was extensively manufactured on its early introduction. The chemical composition of Scheele's green is arsenious acid, six parts; oxide of copper, two; and acetic acid, one. The number of articles in the market in which this dangerous material forms an ingredient, is beyond conception. You send your child for some toys or sweetmeats, and in both it is used as colouring matter. The box of dried fruit you get home is lined with a most seductive emerald green. You get it as a wrapper for your morning chocolate. You get it around your packet of confectionary, and you lay it next your stomach with that blanc-mange, apple-tart and cake which your cook produces as her best production. Your book from Mudie has it for a side lining, and the report of the managers of the Industrial Institute which you receive is covered in the same alluring shade of green. Nor does it stop here. Go into the pastry-cook and confectioner's, and you find the walls and shelves painted with the same destroying colour. Your library is painted or papered with this same colour; and the flowers you so much admire on your wife's head-dress are, alas! emerald green; and the sweet Emily charms you with the wreath and tarlatan of the same fascinating colour. The fact is, this colour pervades us like an atmosphere. The prevalence of it in our shops, our homes, our churches, our concert-rooms, and our tea-gardens, make it the most constant poison we have.—*Macniven & Cameron's Paper Trade Review.*

LOCKWOOD & CO. 7, Stationers' Hall-court, Ludgate-street.

TO ARCHITECTS, SURVEYORS, BUILDERS, AND OTHERS.

TWO ARCHITECTS and SURVEYORS, thoroughly experienced in preparing designs (Classic and Gothic), working details, perspectives (outline or coloured), specifications, estimates, and in valuing houses, dilapidations, laying out property, superintending works, &c. are willing to undertake the above, wholly or partially, on moderate terms. Duplicate drawings and tracings made. Repairs and alterations managed.—Address, ARCHITECTS, Office of "The Builder."

TO ARCHITECTS

MR. CHARLES WARREN, Architectural Colourist,
No. 9, Portland gardens, Notting hill, London, W.

TO CIVIL ENGINEERS, ARCHITECTS, SURVEYORS, AND CAPITALISTS.—WANTED, a Gentleman, to assist in carrying out a PATENTED INVENTION, which is already in operation. Cannot fail to be almost exclusively used when generally known, and has received the entire approbation of some of our most scientific and practical men. Principals only need apply.—Address, BONA FIDE, Office of "The Builder."

GAS and GENERAL ENGINEERING OFFICES, 1, HANOVER STREET, EDINBURGH (opposite the Royal Institution of Arts). Mr. JOHN ROMANS, Practical and Civil Engineer, may be consulted at the above address on all matters pertaining to gas-works, water works, and other engineering questions.—Plans and specifications furnished, works erected and repaired, or taken on lease for a term of years.—Orders received for Scottish Cannel Coal and Fire-clay goods.

DRAUGHTSMAN WANTED.—A first-class Engineering Draughtsman, accustomed to Railway work, and with a thorough scientific and practical knowledge of his business, may hear of Permanent EMPLOYMENT in an Engineer's Office by applying by letter only, to H. care of Messrs. Waterlow & Sons, 49, Parliament-street, S.W. not later than the 30th inst. List of testimonials, former employment, and salary required, with all other necessary particulars, to be stated by the applicants; but no original testimonials to be forwarded, as the Advertiser cannot guarantee their safe return.

MODELLING CLASS.—A TEACHER WANTED for this CLASS at the London Mechanics' Institution.—Address by letter to T. J. PEARSALL, Secretary, London Mechanics' Institution, 20, Southampton-buildings, Chancery-lane.

BRIDLINGTON QUAY, ALEXANDRA HOTEL COMPANY (LIMITED).

WANTED, immediately, a CLERK of WORKS, to superintend the erection of the Bridlington Quay Alexandra Hotel.—Applications, with a reference as to fitness and character, and stating the wages required, to be addressed to the Directors of the Bridlington Quay Alexandra Hotel Company (Limited), Bridlington.

WANTED, a good general DRAUGHTSMAN used to making working drawings of building and mechanical works.—Apply, by letter, stating salary required, and where last engaged, to Mr. J. GLYNN, 96, Shrubland-grove, Dalston, N.E.

WANTED, TWO good SURVEYORS, quick and accurate. Those accustomed to Board of Health surveys preferred.—Apply, stating terms and references, to ALFRED TAYLOR, C.E. Canning-chambers, South John-street, Liverpool.

WANTED, an ASSISTANT in an ARCHITECT'S OFFICE, who is proficient in Gothic detail, and must be a good artistic draughtsman and colourist.—Address, H. Post office, Chester.

WANTED, an Experienced BUILDER'S CLERK, for a Permanency. State qualifications and salary.—Address, by letter, to C. R. No. 29, Great Titchfield-street, Oxford-street.

WANTED, an Out-door APPRENTICE to a CARPENTER and JOINER. Premium required.—Address, W. G. S. 42, Leighton road, N.W.

WANTED, a CARVER in IVORY.—Apply to HORATIO N. GOULTY, Esq. Architect, Brighton.

WANTED, by a Manufacturing Firm in the country, the TEMPORARY ASSISTANCE of a neat Draughtsman, capable of making careful reductions of ornamentations at a small scale.—Further particulars will be given on application to X. Y. Z Post-office, Ironbridge, Salop.

TO ARCHITECTS AND SURVEYORS.

WANTED, a PARTNER, of ability competent to undertake the Management of both Branches of an Established Practice in the Midland Counties. A small capital will be required.—Apply by letter, with references, to B. B. Office of "The Builder."

WANTED, in a Manufactory, a TIME-KEEPER, to Keep Workmen's Ledger, and Post to Prime Cost. Must be under 35 years of age.—Apply by letter, stating qualifications and wages, to ZETA, care of Messrs. Warren Hall & Co. Camden Town, N.W.

TO BUILDERS AND CONTRACTORS.

WANTED, an ENGAGEMENT, or Temporary Employment, as CLERK, by a good measurer, estimator, book-keeper, and accountant, of many years' practical experience; also understands taking off quantities, &c. Good references.—Address, F. B. Office of "The Builder."

TO BUILDERS, STEAM JOINERY, AND SAWING MILL PROPRIETORS.

WANTED, by a PRACTICAL FOREMAN, a RE-ENGAGEMENT, either as Shop and General Foreman, or Managing Foreman over a Builder's Mill, &c. or over a Mill Working for the Trade. Holds a good system of directing men and work, both in mill and shop. Good converter of timber, quick at full detail and striking out, used to going out taking orders, &c. &c.—Address, B. V. Post-office, Forest-hill, London, S.E.

TO CARPENTER BUILDERS

WANTED, to APPRENTICE, a respectable Youth, aged 15, to the above trade, where he will have a good home. Country preferred.—Address, E. D. E. Gazette Office, Harrow.

TO PLUMBERS, PAINTERS, &c.

WANTED, a SITUATION, by a respectable Man, aged 30, a Three branch Hand.—Apply by letter to G. 30, Great Hermitage street, Wapping.

WANTED, JOINER'S WORK by the PIECE. Town or country.—Address, A. B. 13, Winchester-street, Pimlico, S.W.

TO BUILDERS.

WANTED, to PLACE a steady respectable Youth, aged 18, with a practical Builder for IMPROVEMENT. If a Foreman of Works could think him to be a good firm, and board and lodge him, it would be desirable. A premium given. Address, H. W. 42, Threadneedle-street, City.

TO BUILDERS, CONTRACTORS, AND OTHERS.

WANTED, a RE-ENGAGEMENT as CLERK, by a highly respectable and energetic Young Man, of business habits. Is a thorough bookkeeper, and a tolerable draughtsman and measurer. Security if required. Good references. Salary moderate.—Address, A. B. Watson's Library, No. 1, Omega-terrace, Alpha-road, N.W.

TO CARPENTERS AND JOINERS.

WANTED, by a Young Man, a SITUATION as IMPROVER to the above trade. Wages not so much an object as a desire to improve.—Address, R. S. M. Office of "The Builder."

TO ARCHITECTS.

WANTED, by the Advertiser, who has had two years and a half experience as an Assistant, a SITUATION in an Architect's office, in Town or country. He can prepare working and fair drawings, take out quantities, measure up, &c. First class testimonials.—Address, L. N. W. Albert Villa, Selkirk-street, Cheltenham.

TO BUILDERS AND CONTRACTORS.

WANTED, a SITUATION, by a thoroughly qualified BUILDER'S CLERK, who can measure up works and take out quantities, is a good bookkeeper and accountant; also tidy draughtsman, and will acquainted with routine of first class builders' establishments in both town and country. Testimonials unexceptionable.—Address, Z. Post-office, Camberwell-green, S.

TO BUILDERS AND OTHERS

WANTED, EMPLOYMENT, at piece or day work, by an experienced JOINER and good staircase hand, aged 35, or some respectable situation. Would not object to constant work in a good jobbing shop. Good reference. The N.E. or the City preferred.—Address, J. N. 1, William-cottages, Acton-street, Kingsland-road, London, N.E.

TO BUILDERS AND CONTRACTORS.

WANTED, by a thoroughly Practical Man, a SITUATION as General, Shop, or Out-door FOREMAN; or to Take Charge of a Job (Gothic or otherwise). Is conversant with measuring and drawings. Reference given if required. Country not objected to.—Address, A. B. 78, Lillington-street, Pimlico, S.W.

TO BUILDERS AND OTHERS.

WANTED, by a JOINER, aged 31, a RE-ENGAGEMENT as GENERAL FOREMAN, or to Take Charge of a Job. First-class reference from a London firm.—Address, G. W. 7, Rutland street, Pimlico, S.W.

TO BUILDERS, PAINTERS, AND PAPER-HANGERS.

WANTED, a SITUATION, as PAINTER, GLAZIER, and PAPER-HANGER. Can do writing, graining. Is a useful man. Or by piece-work.—Address to W. 3, New Turnstyle, Holborn.

TO BUILDERS AND SURVEYORS.

WANTED, a SITUATION in either of the above offices, by the Advertiser, who has served his articles, and has since been engaged in the office of a first-class builder's surveyor in London. Is thoroughly acquainted with abstracting, billing, measuring up, &c. Age, 23.—Address, AUDIO, 163, Cheapside, City.

TO ARCHITECTS SURVEYORS, &c.

WANTED, by the Advertiser, of 12 years' experience, a RE-ENGAGEMENT as GENERAL ASSISTANT. He is a good draughtsman, designer, &c.; accustomed to superintend Buildings, and well versed in the general routine of the office. Salary moderate.—Address, H. H. Robson's Library, Edgware-road, London.

WANTED, in Town, by a Man aged 40, a SITUATION as PLUMBER, PAINTER, and GLAZIER. Three years' character.—Address, J. C. 10, Great Barlow street, High-street, Marylebone.

WANTED, a SITUATION as WORKING FOREMAN to a Carpenter and Builder, or in a Jobbing Shop, by a steady Man, aged 40. Writes a good hand, can keep books, measure up work, &c. Good reference to present employer, Town or country.—Address, K. 22, Richmond road, Barnsbury, Islington.

TO BUILDERS AND CONTRACTORS.

WANTED, by a Young Man, aged 25, a RE-ENGAGEMENT as CLERK of WORKS, out-door, or GENERAL FOREMAN. Can give first class testimonials as to competency, &c. also security to any reasonable amount, if required.—Address, S. H. Mr Puddy's, Post office, Essex street, N.

TO PLUMBERS AND BUILDERS.

WANTED, by a Young Man, a SITUATION as PLUMBER, or otherwise make himself useful. Good reference.—Address, H. W. 15, Broadley-street, Blandford-square, N.W.

WANTED, by a Young Man, a stanch teetotaller, a constant SITUATION as a good PLUMBER and GASFITTER, GLAZIER, &c. First-class references from late employer.—Address, J. WILTON, 3, Leicester-street, Cleveland-square, Paddington.

TO OWNERS OF HOUSE PROPERTY OR ON A GENTLEMAN'S ESTATE.

WANTED, a PERMANENCY, by a Young Man, who is thoroughly acquainted with the carpentry, painting, and general repairs of every description of house property, good writer, and can keep accounts.—Address, L. M. 14, Cadogan-street, Chelsea.

TO CONTRACTORS, BUILDERS, AND OTHERS.

WANTED, by the Advertiser, a SITUATION as STORE or TIME KEEPER, or any place of trust. Good reference can be given.—Address, R. A. 6, Crozier-street, Stangate, Lambeth.

WANTED, by the Advertiser, a MANAGER'S or General FOREMAN'S SITUATION. Well acquainted with the rudiments of the building department.—Address, T. M. Office of "The Builder."

TO ARCHITECTS AND ENGINEERS.

WANTED, by a thoroughly Practical Man, a SITUATION as CLERK of WORKS. Has had fifteen years' experience. First class testimonials.—Address, L. A. care of Mr Kerby, 37, Lambeth walk.

WANTED, an ENGAGEMENT, by an ASSISTANT, aged 28, who is a rapid perspective and general draughtsman, writes well, and is quick at calculations.—Address, C. T. Office of "The Builder."

TO LIME, CEMENT, AND BRICK MERCHANTS.

THE Advertiser, who for the last seven years has held a responsible situation as WHARF and GENERAL CLERK in the above business, wishes for a similar ENGAGEMENT, or as Traveller. Salary moderate.—Address, G. C. No. 15, St. Paul's Crescent, St. Paul's-road, Camden Town.

TO CIVIL ENGINEERS, SURVEYORS, &c.

THE Advertiser, aged 24, is desirous of a SITUATION as ASSISTANT or DRAUGHTSMAN. Has a thorough acquaintance with all ordinary and engineering surveying, levelling, &c. and is a good and expeditious draughtsman. No objection to the country or to going abroad.—Address, C. E. S. 34, Grafton-street East, Tottenham-court-road, W.C.

TO BUILDERS AND LAND PROPRIETORS.

THE Advertiser, aged 27, who has for the last five years been accustomed to superintend works, would be glad to meet with an ENGAGEMENT as SUPERINTENDENT or AGENT. Can prepare drawings, specifications, and quantities, set out and measure work, and take levels. Excellent testimonials. References and security if required.—Address, C. B. A. Mr. Jinkins's, Broad street, Folkestone, Kent.

TO CIVIL ENGINEERS, SURVEYORS, &c.

THE Advertiser, who is a good draughtsman and surveyor, desires a RE-ENGAGEMENT. Good references. Salary moderate.—Address H B, Office of "The Builder."

TO BUILDERS.

THE Advertiser, son of an extensive builder in the country, desires an ENGAGEMENT in a first-class building firm in London; is acquainted with the general routine of an office, and has fair practical experience. Age, 21 years. A moderate salary expected. Good references.—Address, A. B. 89, Cannon-street West, City

TO ARCHITECTS.

THE Advertiser, who has had considerable experience in designing, preparing perspective, competition, and office drawings, a good draughtsman and colourist, is desirous of an ENGAGEMENT in town. Good references.—Address, R. V. No. 2, Vincent street, Brompton, S.W.

TO CIVIL ENGINEERS AND SURVEYORS.

THE Advertiser, who has had considerable experience in town surveying and levelling, extensive drainage, waterworks, &c., desires an ENGAGEMENT in an Office, or otherwise Address, J. E. T. Post-office, Oxford.

TO OWNERS OF ESTATES OR PERSONS REQUIRING A MANAGER OF A GENERAL REPAIRING BUSINESS.

THE Advertiser, aged 40, married, is relinquishing business, and is desirous of an APPOINTMENT in either of the above. Would prefer the country, and would not object to a Clerkship. Principals only attended to. — Address, POPULI, care of Mr. Nurse, Oriental China Warehouse, 19, Old Cavendish-street, W.

FOREIGN TIMBER TRADE. — The Advertiser, who is thoroughly conversant with the above business, desires an ENGAGEMENT as SALESMAN or TRAVELLER in a house of standing.—Address, SWEDE, 15, Eastcheap, E.C.

TO ARCHITECTS AND BUILDERS.

AN experienced QUANTITY SURVEYOR would be happy to PREPARE BILLS of QUANTITIES, Measure Works, Survey Dilapidations, Prize Bills, and Prepare Accounts, on moderate terms. Half-a-guinea per day, if engaged by time.—Address, L. D. Post-office, Fore-street, E.C.

TO ARCHITECTS AND SURVEYORS.

A YOUNG GENTLEMAN, who has been articled in a good office of general practice, is desirous of meeting with an ENGAGEMENT, in town or country. Would be willing to make himself generally useful in return for the benefit of improvement, at a small but progressive salary.—Apply by letter only, 4/8, "Herald Office," Birmingham.

TO ARCHITECTS.

A GENTLEMAN, aged 24, who has been six years in the office of an Architect and Surveyor in the City, of extensive practice, requires an ENGAGEMENT for two or three days in the week. Terms, Two Guineas per week. Highest references.—Address, E. B. Office of "The Builder."

TO PARENTS AND GUARDIANS.

AN Architect and Surveyor, of long standing, and considerable experience, holding a public appointment, having limited his practice, is enabled to give his personal attention to PUPILS, in order to prepare them for the profession.—Terms and other particulars will be given personally, or by letter, addressed to J. B. 16, Craven-street, Strand, London.

TO ESTATE AGENTS, BUILDERS, ARCHITECTS, &c.

A YOUNG MAN of considerable experience, desires EMPLOYMENT in Draw Plans, Superintend Works, Collect Rents, &c. Twelve months' reference to last employer, and security.—Address, S 39, Shoreditch.

A STAIRCASE HAND is open to an ENGAGEMENT, in Town or country.—Address, A. B. 26, Grange-road, Bermondsey.

AS DRAUGHTSMAN. — The Advertiser, who has had much experience in ornamental scroll-work drawing, &c. in a manufacturer's office, desires a RE-ENGAGEMENT. Is also a good accountant, and has been accustomed occasionally to assist at the books.—Address, X. Y. 35, New street, Kennington, S.

TO BUILDERS, &c.

A YOUTH, who has been two years in a Builder's Office, is in WANT of similar EMPLOYMENT. Can trace drawings, and understands bookkeeping. As experience is desired, a comfortable home would be considered a sufficient remuneration for a time, but a small salary would not be declined. Highly respectable reference offered. — Address, R. S. 44, Mount-street, Lambeth.

TO GRAINERS, BUILDERS, AND OTHERS.

A FIRST-CLASS GRAINER and MARBLER is in want of a JOB.—Address, R. B. No. 40, Worship-street, Finsbury-square, City.

TO BUILDERS.

A BUILDER'S FOREMAN is open to an ENGAGEMENT, at a moderate salary. Is thoroughly practical, and a good draughtsman, and quick estimator. Good references.—Address, B. C. care of Mr. Cade, 28, Mount-gardens, Westminster-road.

TO ARCHITECTS.

AN Architect is desirous of Engaging the Permanent ASSISTANCE of a Gentleman thoroughly acquainted with, and has practically carried out, the design and detail of Italian Architecture.—Address, stating qualifications, &c. to A. D. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

AN ASSISTANT, having small independency, is desirous of EMPLOYMENT. Has served nearly two years under a surveyor of one of the Metropolitan Boards of Works, and several London architects and surveyors. Terms 2½ per week.—Address, R. H. D. 32, Elmore-street, Downham road, N.

A TRAVELLER, who is also an Engineer, visits all the large towns in the kingdom, calling on Architects, Boards of Health, first class Builders, and Ironmongers, is open to a COMMISSION. Reference to employers.—Address, H. 29, New Rooms, 103, Cheapside, E.C.

TO ARCHITECTS AND SURVEYORS.

AN Efficient DRAUGHTSMAN, in both styles, with a general knowledge of office routine, good at perspective, a fair colourist, and knowledge of quantities, &c will be shortly DISENGAGED. Has been used to competition drawings. First-class testimonials. Term: moderate for a permanency.—Address, G. B. Messrs. Dawson & Sons, 74, Cannon-street, London, E.C.

T. KENT'S PAINTING-BRUSH MANUFACTORY

Is continued by his Successors,

CROWDEN & GARROD,

Falcon-square, London, E.C.

Where the TRADE is supplied with the same superior quality made the house celebrated.

N.B. The names of T. KENT and CROWDEN & GARROD, are stamped on the brushes.

Also Manufacturers of the Patent India rubber Knife-boards, Cocoa Nut Matting, Mats, &c. See Catalogue.

KENT'S PAINTING BRUSHES

are all stamped G. B. KENT & CO.

And are manufactured solely by G. B. KENT & CO.

at 11, Great Marlborough-street, London, W.

Established 1777.

KENT'S BRUSHES have been celebrated for their superior quality for the last eighty-six years, and may always be depended upon as the best that can be made.

PRIZE MEDAL, 1862.

HAMILTON & CO.

No. 10, GREEK-STREET, SOHO-SQUARE, LONDON, W.

JAMES LYNE HANCOCK,

VULCANIZED INDIA-RUBBER WORKS, GOSWELL-MEWS, GOSWELL-ROAD (opposite Seymour-street), LONDON, E.C.

TERRA COTTA and FINE STONEWARE POTTERY, warranted to stand Frost.

JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and FINE STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, Strings, Copings, Cills, Tracery, Balusters, Cap tils, Crosses, Terminals, Vases, Statues, Brackets, Colonnes, Garden Edging, Guttering, Tiles, and twelve inch Paving Tiles, &c. &c.

Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

London Office, 377, Oxford-street, W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern book, designed by M. Digby Wyatt, esq., together with a special design and estimate of cost, adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 426, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Moodlesfield-street North, City-road Basin, N. Sadly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and Sadly, that the "Reports of the Juries," page 281, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Peakes," Tunstall, Staffordshire, as the first of the Kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION.

MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts, the Prize Medal at the Great Exhibition, 1851, Two First-class Medals at the Paris Exhibition, and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works 39 and 40, Upper Belgrave-place, Pimlico, S.W.

PENCILS, BLACK LEAD, and COLOURED CHALKS.

A. W. FABER'S POLYGRADE LEAD PENCILS, sold by all Stationers and Artists' Colourmen.

Sole Agents, HEINTZMANN & ROCHUSSEN, 9, Friday-street, E.C.

PRIZE WAGGONS and CARTS.—HAYES & SON,

Manufacturers to Her Majesty's Board of Ordnance, and all the principal Railways in the Kingdom,

Coach and Cart Wheelwrights, Spring Van and Waggon Builders, Timber Merchants, Contractors, &c.

Manufacturers of Carts, Vans, Waggons, Trucks, and Implements for all Railways, Town use, Agriculture, and Exportation.

Contractors' and Builders' Dobbin and other Carts, Barrows; Navvy, Excavators', Crowding, and Oil-bearing ditto, on the shortest notice and of the best materials; &c.

HAYES & SON,

SCOTGATE WORKS STAMFORD.

BRYCESON'S ORGAN FACTORY,

BROOK STREET, EUSTON ROAD, LONDON, N.W. Established 1796.—Apply for PRICED CATALOGUE of St. Cecilia, Semiramore, and other Organs, usually in Stock. Also as to the Tuning, &c of Organs in all parts of the country. Church Organs of any size built, enlarged, or revoiced, as well as removed and WAREHOUSED DURING RESTORATIONS. PRIZE MEDAL, 1851.

GUTTA-PERCHA MILL-BANDS.—The Gutta Percha Company beg to state that the increasing demand for the Gutta-Percha Stripping for Driving bands, Latherstraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractability and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water, and the facility with which the only joint required can be made in lengths of from 30 to 50 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union joints, Flasks, Bottles, Bowls, Toilet trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF ROAD, CITY ROAD, LONDON.

TO BUILDERS, CONTRACTORS, &c.—For SALE, cheap, a Quantity of PATENT WATER-CLOSETS; PANELLING, DOORS, &c. for ditto; Stoves and Range, Rain-water Pipes, Gutters, Sink-traps, Gratings, Columns, Cantilevers, &c.—H. T. 7, Archbolt-terrace, Manor-street, Chelsea.

PARQUETS SOLIDAIRES.—HOWARD & SONS, 26 and 27, Berners-street, are prepared to supply Machine-made Patented Solid PARQUET FLOORS 30 per cent. cheaper than they have been yet offered. Illustrated Catalogues, plans, and estimates free.

TO BE DISPOSED OF, cheap, a CHEST of CARPENTER'S and JOINER'S TOOLS, in first rate condition, the owner having no use for them.—Apply at No. 16, Stafford-place South, Pimlico, between FIVE and SEVEN in the Evening

NOTICE of REMOVAL. TARPAULINGS for BUILDERS FOR SALE or HIRE. Marquees and Awnings for Foundation stones. Scaffold Cord and Hemp Rope.—JOHN EDGINGTON & CO. Removed to 43, Long-Lane, Smithfield, E.C. Manufactory, 103, Old Kent road, S.E.

VICTORIA MARBLE WORKS,

38, LOWER BELGRAVE PLACE, adjoining the Victoria Railway station, and at Commercial-road, Pimlico, London.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building purposes. Supplies direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank-street, London, S.W.

RED MANSFIELD STONE, WHITE MANSFIELD STONE.

YELLOW MAGNESIAN or BOLSOVER LIMESTONE.

Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station.

Mr. ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

ROCHE ABBEY QUARRIES.—STONE from the above Quarries, in blocks of all sizes, consigned in trucks from Bawtry, Doncaster, Worksop, or Maseroud, Railway Stations, or worked at the Quarries, and delivered at either of the above Stations without injury. Full particulars as to price, &c. may be had on application to Mr. TIPPET, Sandbeck Office, Tickhill, Rotherham.—Samples sent if required.

LITTLE CASTERTON FREESTONE.
Apply for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

ABERDEEN POLISHED GRANITE WORKS.—Awarded Prize Medal in 1851, Silver Medal in 1855, and Two Prize Medals in 1862.
Red, Blue, and Grey Granite for every description of architectural construction, decoration, memorials, and general purposes.
Apply to ALEX. MACDONALD, FIELD, & CO. Aberdeen; or to Mr. DAVID WILLET, London Agent, 464, Euston-road, N.W.

DEVONSHIRE MARBLE WORKS,
24, Strand Dawlish, Devon.—A. W. BLACKLER begs to inform architects, builders, &c. that he supplies all kinds of DEVONSHIRE MARBLE WORK, Columns and Shafts of any dimensions and colour, Chimney-pieces, Inlaying, and every description of marble work, from all the various quarries in Devonshire. Marbles, in block or sawing, supplied to the trade, consigned in railway trucks direct from the quarries.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales. SLABS and CISTERNS delivered at any station in quantities of not less than five tons, from their depôts, Bangor, Garston, Saltney, Chester, and Gloucester.
Prices forwarded and estimates given on application.
1, BOLD TERRACE, CHESTER.

GRANITE.—The Cheesewring Granite
Company, Limited, Liskeard, Cornwall.
SHOW ROOMS, 5, CANNON-STREET, E.C.
London Agents—TREGELLES & TAYLOR.
Manager JAMES J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster Bridge.
DRINKING FOUNTAINS, MONUMENTS, and ORNAMENTAL WORKS supplied, and ARTISTIC DESIGNS suitable to the materials forwarded on application.
EDGE RUNNERS OF SUPERIOR QUALITY.

W. HOLLAND, Pavior, Mason, and Road Contractor.
Aberdeen, Guernsey, Mount Sorrel, and Hayter Granite Depôt.
Paving Works done in town or country.
Gravel Wharfs, 67, Augusta-street, Regent's Park Basin.

TISBURY STONE.
The WARDOUR (CHILMARK) and TISBURY STONE COMPANY, Limited,
Are prepared to execute orders to any extent for their TISBURY STONE.—This is a close, fine-grained Stone, of a beautiful colour, possessing all the qualities of the best Portland, in which range it is placed geologically.
It will supply the long-wanted desideratum of the Architect, Builder, and Sculptor, as the Stone is a first-class Weather Stone, easily worked, and equals a fine marble; and is eminently adapted for carved mouldings, high class architecture, and works of art, requiring only to be known to become the
STONE OF THE DAY.
Specimens, Price, &c. may be obtained of
SAMUEL TRICKETT,
General Stone Merchant, Millwall; or at the Offices of the Company, 3, Adelaide-place, London Bridge.

HY. GEORGE & COMPANY,
CAEN and AUBIGNY QUARRYMEN and GENERAL STONE MERCHANTS, CAEN WHARF, ROTHERHITHE, S.E.

Lambeth; and Kent-road Bridge,
The usual commission allowed to merchants of the trade.
N.B.—Every Description of the Building Goods of the Trade always in Stock.

BURHAM BRICK, LIME, and CEMENT COMPANY, BURHAM WHARF, BELVIDERE-ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE, GAULT BRICKS, TILES, POTTERY, DRAIN PIPES, STONE LIME, PORTLAND and other CEMENTS, and BUILDING MATERIALS of all descriptions. Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to Inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two fold
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 25 to about 15 per cent of the total make, which is also effected in a large proportion of Ovens.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster.

BRICKS.
FINE WHITE FACING BRICKS.
WHITE ORNAMENTAL BRICKS.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.
39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.
PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied so readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

BARTLETT, BROTHERS, & CO.
DEVONSHIRE WHARF, CAMDEN TOWN, N.W.
PATENT INDURATING SOLUTIONS,
For the Preservation of Stone, Cement, &c.;
PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, &c.

7, NORTH WHARF ROAD, PADDINGTON, W.

PARIAN CEMENT for INSIDE WORK.
With this Material Houses may be finished and occupied in one-fourth the usual time, as Parian Stucco may be painted or papered within forty-eight hours. A finer quality produces a beautiful and hard scagliola imitation of marble.—Manufacturers, FRANCIS, BROTHERS, & POTT, Nine Elms, London.

TO BUILDERS, CONTRACTORS, &c.
PORTLAND CEMENT.—
JAMES NESBIT is prepared to supply Portland Cement of superior quality and strength, at such a price as will enable Builders to use it for purposes from which the high price usually charged has hitherto prevented its being used. Terms on application.—Barney Arms, Portland Cement Works, Burgh Castle, Great Yarmouth.

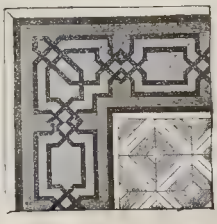
FOR PRICES, SEE LAST WEEK'S ADVERTISEMENT.

HUBBUCK'S PATENT WHITE ZINC PAINT.



By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.
By Her Majesty's Royal Letters Patent.
F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.
And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House in Hanover square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have exclusively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully requested to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to the roofs. The original works where the above roofing is made are F. McNEILL & CO.'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

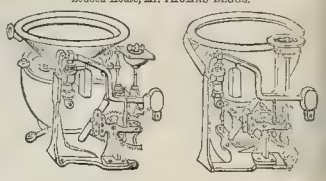
J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.



Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each Closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply Pipe. No cistern, valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick Lane, Newgate-street, London.

GUEST & CHRIMES, FOUNDRY and GENERAL BRASS WORKS, Rotherham; and 37, Southampton-street, Strand, London, W.C.

Loudon House, Mr. THOMAS BEGGS.

ESKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all smell, and requires no cisterns, service boxes, cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipes. It is supplied in three qualities, all equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are usefully applied to the ordinary Pan Closet, alike dispensing with all cisterns, service boxes, levers, cranks, wires, &c. The Regulator is supplied separately, as well as connected to ordinary direct Service Main Cottage Water Closets.

Chrimes's Patent High pressure Single and Double Loose Valve and Screw Down Cocks; Improved Self-acting and Pull Water-Closet; Patent Absolute Water Waste Preventer; Plumbers' and Gas-Fitters' Brass Work of every description. Drawings, Descriptions, Prices, and Testimonials will be forwarded per post on application as above.

INTERNATIONAL EXHIBITION, 1862.

DEALS and BATTENS 100,000 Pieces " "
And other Wood Goods. "
HENRY FREEMAN & CO. Brokers,
3, Crooked Lane, Cannon Street, E.C.

BEAUTIFUL PROPERTY on the RIVER TWEED for SALE.—THE HOUSE and PROPERTY of ROSEBANK, upon the River Tweed, about half a mile below the town of Kelso, N.B. left by his uncle to the great Poet and Novelist Sir Walter Scott, Bart who passed some of the happiest days of his youth on this beautiful spot, and the tree in which he used to sit may still be seen overhanging the river. The Land, which is of excellent quality, and measures upwards of twenty-two acres or thereby, has a frontage of a quarter of a mile along the noble River Tweed, which is here seen in its greatest beauty. The bank is exquisitely wooded with fine old timber, and pleasure walks extend all along the margin of the river. Few places in Scotland possess more picturesque beauty. The purchaser will have the right to the fine Trout Fishing in that portion of the side of the Tweed which bounds the property, and Salmon Fishing can be procured in the immediate vicinity. The property is situate in a sporting country, where Shooting can be obtained, and it is within an easy distance of most of the meets of the Duke of Buccleuch's and Earl of Wemyss' Hounds.

The house is in good repair, and contains dining-room, drawing-room, library, housekeeper's room, four bedrooms, two dressing-rooms, two attic-rooms, water-closet, kitchen, and other conveniences. The offices consist of stable, coach house, washing-house, cow-house, barn, &c. The garden is well stocked with fruit and standard fruit trees, and is early and productive. Attached to the property is an exclusive right of pasturage, and other rights and privileges. The immediate vicinity of this property to the close grounds of S. chal, including Abbotsford, Melrose Abbey, Dryburgh Abbey, Jedburgh Abbey, Kelso Abbey, &c. together with its great natural beauty, its sporting facilities, and its proximity to the town of Kelso, which makes it such an eligible site for villas, not to mention the number of noblemen's and gentlemen's seats with which the neighbourhood is studded, combine advantages rarely to be met with. The property will be EXPOSED to SALE, by PUBLIC AUCTION (if not previously disposed of by Private Sale), at the SALE ROOMS of Messrs. CAY & BLACK, 62, George-street, EDINBURGH, on TUESDAY, 1st DECEMBER, 1863, at ONE o'clock afternoon, at the extremely low upset price of 5,500*l*. For further particulars apply to JAMES TAIT, W.S., Kelso, who will show the title deeds and articles of roup; or to Messrs. SCOTT, MONCRIEFF, & DALGETTY, W.S., 17, Duke-street, Edinburgh.

TO BUILDERS, CARPENTERS, AND OTHERS.

MESSRS. J. J. CLEMMANS & SON will SELL by AUCTION, at No. 3, Bateman's-row, Shoreditch, on TUESDAY next, at HALF-PAST TEN for ELEVEN (the premises being taken by the North London Railway), the STOCK of a TIMBER MERCHANT: comprising a large quantity of Spanish mahogany, Italian walnut, birch wainscot, 5,000 first and second pine deals, &c. Approved bills over 20*l*. will be taken.—On view day prior. Catalogues of the Auctioneers, 1, Spital-square, and 21, Holywell-row, Finsbury.

UNRESERVED SALE OF PAPERHANGINGS.

MR. EDWIN WHITE is directed to SELL, without the slightest reserve, at his ROOMS, 12, Holborn Bars, and 3 Castle-street, Holborn Hill, on THURSDAY next, NOVEMBER 26th, at ONE for TWO precisely, 7,500 pieces of modern English and French PAPER HANGINGS, consisting of Flocks, Gelds, Satins, Grounds, Drys, Marbles, &c., in great variety.—Catalogues and view, Wednesday and morning of Sale.

BUILDING MATERIALS.—MARLBOROUGH-PLACE, near the Nelson, Old Kent-road.

MR. C. F. SMYRK will SELL by AUCTION, as above, on MONDAY, NOVEMBER 23, at TWELVE for ONE, 18 Lots of sound, useful MATERIALS and FIXTURES, taken down for public improvements, assorted and lotted to suit builders and others, including long timber in joists, rafters, brestsummers, plates, and bond timbers, flooring and lining boards, glazed and panelled partitioning, mantle and stone chimney pieces, doors, sashes, shop fronts, closet fronts, 1,000 feet of stone paving, coping and sills, twenty stacks of firewood, stoves and ranges, old iron, &c. &c.—Catalogues on the Premises; and of Mr. SMYRK, 10, Newington place, S.

GRAYS, ESSEX.—1,100,000 Stock and other Bricks, an Entire Horse-Light Chaise ditto, and a Colt, 2 Brick Carts, Dog Cart, and Cart Harness.

MR. GRIST will SELL by AUCTION (by order of the mortgagee), in DAVIS'S BRICK FIELD, Little Thurrock, on THURSDAY, 26th NOVEMBER, at ONE o'clock precisely, 1,100,000 NEW BRICKS, comprising Land burnt and good coloured Light stocks, grey stocks, paviors, grizels, place, latts, burrs, &c.; 2 cart-horses, a colt, 2 brick-carts, dog-cart and harness.—The Jewel Sale.—Catalogues at the Field; also at the neighbouring Inns; and of Mr. GRIST (successor to the late Mr. T. J. Barnes), Auctioneer and Surveyor, No. 78, King William-street, Mansion House, E.C.

TO BUILDERS AND OTHERS.

MR. W. HOLLINGSWORTH is instructed to SELL by AUCTION, without the least reserve, on MONDAY next, NOVEMBER 23rd, at ONE o'clock precisely, the SALE of ROOMS, 12, High Holborn, the STOCK IN-TRADE of a PAPERHANGER, leaving the business; comprising 1,000 pieces of paper, of excellent quality and design, suitable for dining and drawing rooms, parlours, bed rooms, and staircases. Also, BUILDERS' IRONMONGERY, of every description; 25 capital Mortise Cupboard doors, sashes, and other Building Materials, all for absolute sale.—Catalogues sent on application at the Auction Offices, 13, High Holborn.

TO BUILDERS, CABINETMAKERS, AND OTHERS

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES, Camden-terrace, Camden-town, on MONDAY, NOVEMBER 23, at TWELVE o'clock, 6,000 feet of mahogany in planks and boards, 3,000 feet of birch, 3,000 planks, deals, and battens, 2,000 feet of oak, 3,000 feet of wide pine boards, flooring, quartering, cut stuff, doors, 3 chimney-pieces, scaffold bearers, ladders, barrows, &c.; also a grey horse, and cart.—Auction Offices, 2, Cardington-street, Hampstead-road.

FARNBOROUGH and ALDERSHOTT FREEHOLD and GROUND-RENT SOCIETY (Limited).—To BUILDERS and OTHERS.—Land on this Society's Estate at Farnborough, TO BE LET on building leases, or TO BE SOLD, upon advantageous terms.—Particulars may be had of the Architect, Mr. H. CURREY, 4, Lancaster-place, Strand, W.C.; or at the Offices of the Society, 18, New Bridge-street, Blackfriars.
EDWARD CHATFIELD, Managing Director.

TO BE LET, by the Fishmongers' Company of London, on a Building Lease for Eighty Years, valuable BUILDING LAND, Newington, Surrey, within three minutes' walk of the Elephant and Castle. About two-thirds of an Acre of Ground, situate on the east side of the Walworth-road, having a frontage of 106 feet in Crown-row, and a frontage of 196 feet 8 inches in Prospect-row, with Eighteen Cottages in the rear of William's-place. This property is well adapted for shops and business purposes, requiring space and ready access to the principal thoroughfares of the metropolis. TO BE LET by TENDER, in one or more lots, to suit the views of different parties wanting the ground.—Apply to Mr. W. B. TOWSE, the Company's Clerk, Fishmongers' Hall, London Bridge; or to Mr. RICHARD BUTLER, the Company's Surveyor, 28, Frederick-street, E.C. where plans and particulars may be seen. The Tenders are to be sent in by TUESDAY, NOVEMBER 24th next, at NOON precisely.
Fishmongers' Hall, October 20, 1863.

WATFORD, HERTS.—TO BE LET, on BUILDING LEASES, several PLOTS of FREEHOLD LAND, in the neighbourhood of the above town, in close proximity to the Station, and on the new road recently made.—For plans and particulars apply to Mr. EDWARD H. BURNELL, Surveyor, 32, Bedford-row, London, W.C.

EXTENSIVE MANUFACTURING PREMISES, with STEAM POWER.—TO BE LET, one of the finest BUSINESS PREMISES in the City; containing large yard, with drying shed, piling stage, extensive Workshops, fitted up with circular saws, mortise and tenoning machines for making doors, &c.; three vertical saw frames for cutting deal planks, &c. 26 inches deep; two powerful steam engines, with hot water tank; a well of good water, self-acting benches, together with every convenience for a large trade: public and private offices, fitted with fire-proof safes, &c. For further particulars apply at the City Timber Yard, 20, Long lane, City.

MID-KENT LINE. — Eligible Freehold BUILDING LAND TO BE LET, on LEASE for 99 years, direct from freeholders. It is well situated on the side of a hill, commanding beautiful scenery, about ten minutes' walk from the Catford Bridge Station, Mid-Kent Railway. Railway journey, 20 minutes. Land may be seen, and particulars obtained, by applying on the spot to FREDERICK SELBY, Ravensbourne Park, Lewisham, S.E.

SYDENHAM HILL.—LAND TO BE LET for BUILDING, 450 feet frontage, average 500 feet deep. Beautiful site, with extensive prospects, and fronting a high road; close to three railway-stations, and within ten minutes' walk of the Crystal Palace. May be had in one, two, or three plots, for detached Residences.—For particulars, apply personally to Mr. HENRY DAWSON, Architect, 16, Finsbury-place South, E.C.

BRICKEARTH, at Southall, near the Grand Junction Canal, and the Great Western Railway.—TO BE LET, from Twenty to Thirty Acres of excellent BRICKEARTH, of good depth.—For plans and particulars apply to Mr. RICHARD TRUMPER, 23, Lincoln's-inn fields, W.C.

BUILDING GROUND TO LET.—GREAT TOWER STREET, in the City of London.—The Commissioners of Sewers of the City of London will meet in the Guildhall of the said City, on TUESDAY, the 8th day of FEBRUARY next, at HALF-PAST TWELVE o'clock precisely, to receive proposals for taking on BUILDING LEASES, for a term of eighty years (the first year at a peppercorn rent), certain PLOTS of FREEHOLD LAND, situate in Great Tower-street, in the City of London, in the centre of the Corn and Colonial Markets. Further particulars, with conditions and printed forms of proposal, may be had on application at the Office, where plans of the ground may also be seen. The Commissioners do not bind themselves to accept any proposal unless deemed advantageous. Persons making proposals must attend personally, or by a duly authorised agent, on the above-mentioned day, at HALF-PAST TWELVE o'clock precisely, and the parties whose offers are accepted will be required to execute an agreement and a bond at the same time.
Sewers Office, Guildhall, November 6, 1863.

BUILDING LAND at STAINES.—Mr. PHILIP D. TUCKETT is instructed TO LET, on building leases, in lots, available for building in the spring of next year, or so, as the above is nearer to the station, and in every way better situated than any other available site, it can be confidently recommended to builders.—For particulars apply to Mr. PHILIP D. TUCKETT, Land Agent, Surveyor, and Auctioneer, 76, Old Broad-street, E.C.

NORTH STREET, MILE END.—TO BE LET, on building leases, for eighty years, a valuable FREEHOLD BUILDING SITE, with extensive frontage to North-street, occupying an area of nearly three quarters of an acre, and suitable for the erection of factories, model-lodging-houses, shops, or dwelling-houses.—For plan and particulars, apply to Mr. N. S. JOSEPH, Architect, 27 A, Bucklersbury, Cheapside.

WANTED to RENT, PREMISES, containing an area consisting of about 30,000 feet. The building must be of substantial character, fitted for steam power. A good light indispensable, especially in the upper stairs. A space within the circle of about a mile from St. Bride's Church, Fleet street, would be preferred.—Address, with full particulars, to Messrs. JENNINGS & SON, Solicitors, 18, Bennet's-hill, Doctors' Commons, E.C.

GROUND WANTED.—A Plot of Ground, not less than 100 feet square, within a half mile radius of the Elephant and Castle.—Inquire of S. WALTON, No. 1, Russell-terrace, Oakley square.

LAND.—WANTED, for a PUBLIC BUILDING, a PIECE of FREEHOLD or LEASEHOLD PROPERTY, containing an area of about 6,000 feet superficial. It is desirable that it should be situate in a good public thoroughfare, in or about the locality of Broadstairs, Brompton-road, or Knightsbridge.—Apply, by letter, stating size of the property, &c. to S. T. Mr. Lindsey's, 19, Catherine-street, Strand, W.C.

GROUND in BASINGHALL-STREET, now occupied by Houses and Warehouses, known as Nos. 20 and 21, Basinghall-street, TO BE LET by TENDER, for Building purposes. A plan of the ground and form of Tender may be obtained at the Office of EDWARD FANSHAW, Esq. No. 74 Lawrence Pountney-hill, Cannon-street; or of Messrs. HOLLINGSWORTH, TYERMAN, & GREEN, No. 24, Gresham-street, London; where TENDERS, under seal, are to be delivered on or before the 1st DECEMBER next. The Owner does not bind himself to accept the highest or any Tender.

MANUFACTURING PREMISES, OR LAND on which such may be built, WANTED, within five miles of the Post-office, or near full railway communication. Short leasehold objected to; a freehold plot of one to five acres preferred.—Particulars to be addressed, C. F. M. Messrs. Dawson & Sons, 74, Cannon-street, E.C.

FREEHOLD LAND TO BE SOLD, or LET on BUILDING LEASES About Two Acres at Forest-hill, near the Station; One Acre at Norwood Junction Station; Two Acres at Glengall-grove, Old Kent-road. Also a WHARF TO LET, at Kent-road Bridge.—Apply to Mr. MAY, Acorn Timber-wharf, Old Kent-road.

TO BUILDERS and OTHERS.—Notice is hereby given that the Trustees of the Rev. Dr. Spurlow's Charity Estate at Hackney have several PLOTS of LAND TO LET to build on, eligible for villas and other respectable private dwellings. The land will be direct from the freeholder, and free of land tax and tithe commutation rent-charge. The above estate offers an excellent opportunity to persons desirous of building houses to reside in themselves.—For further particulars inquire of Mr. GILDLON, Surveyor, No. 2, Old Church-yard, Hackney; or of Mr. C. H. FULLEY, of Upper Homerton, and 28, Great Winchester-street, Old Broad-street, City, Solicitor.

THE INDIAN TEA COMPANY of DARJEELING (LIMITED).

Incorporated under the Joint Stock Companies' Act, 1862, by which the liability of Shareholders is limited to the amount of their shares.

SOLICITOR.

James Bell, Esq. 21, Abchurch-lane.

SECRETARY (pro tem).

Mr. William Edgar.

OFFICE OF THE COMPANY.

216, Great Jan House, Old Broad-street.

This Company is formed for the purpose of purchasing and working valuable Tea Plantations in the south of Darjeeling, and for extending its operations hereafter by the purchase of other estates.

The property already agreed to be purchased is freehold, and consists of 1,000 acres, of which 673 are in a ring fence (the area being ascertained by Government survey); 200 acres are planted with tea, more than one half of which is occupied by plants of three years' growth. From the produce of this garden, both in tea and tea-seed, it is expected large profits will shortly be realized. About 450 acres have been cleared of timber, and it is calculated that an outlay of 3,000*l*. during the first year will (if sufficient seed can be procured) place this portion of the property under tea-cultivation, making some 650 acres in plant, and that a gross sum of 15,000*l*. will be sufficient to bring them into full bearing.

The Directors have arranged with the Vendor for the purchase of the property, with the Manager's House, Factory, Agricultural Implements, &c. complete for a sum of 13,800*l*. in cash, to be paid by instalments, and 7,200*l*. to be paid in shares, but these shares are not to be allotted to the Vendor until the property shows nett profits exceeding 7 per cent.

Mr. E. T. Fitzgerald, the Vendor of the property, has consented to superintend the Plantation, without salary, for a term of three years, and he has agreed to deposit with the Directors a sum of money sufficient to secure to the Shareholders a minimum dividend of 7 per cent. for three years, when it is anticipated that the property will show profits far exceeding that amount. This guarantee is made on the understanding that the sum, if any, required to be advanced by Mr. Fitzgerald, is to be repaid to him when the profits exceed 7 per cent.

Labour is abundant in the district. A road runs through the midst of the Plantation, and there is direct communication with Calcutta.

The profits have been calculated on an average produce of 230*lb*. of tea per acre, on tea-plants of five years' growth. The average value of the tea on this estate, as estimated by Messrs. W. J. & Hy. Thompson, of Mincing-lane, from samples furnished by the Vendor, is upwards of 2*s*. per pound. The cost of cultivation and manufacture is estimated at less than 9*d*. per pound, thus leaving a nett profit of more than 1*s*. per pound. From the sale of the tea alone, exclusive of tea seed, the average value of which is 12*l* per maund (of 80 lb).

The capital will not be increased without the assent of the Shareholders at a special meeting.

No promotion-money has or will be paid by the Directors.

In the event of no allotment being made, the money will be returned to the Subscribers.

Prospectuses and Forms of Application for Shares may be obtained at the Bankers and Offices of the Company; but no application will be considered unless a deposit of 1*l*. for each share applied for shall have been previously paid to the Bankers of the Company. Shares will be allotted subject to the provisions of the Memorandum and Articles of Association, which may be seen at the Offices of the Company.

THE QUEENSFERRY ALKALI COMPANY, Limited.—The Directors hereby give notice that no further APPLICATIONS for SHARES in the Company can be received after TUESDAY next, NOVEMBER 24th, from the London District, or after WEDNESDAY, the 25th, from the country.
(Signed) E. F. FERRIS, Secretary.
23, New Broad-street, E.C.

ACCIDENTS
By ROAD, RIVER, or RAILWAY;
Accidents in the Field, the Streets, or at Home,
May be PROVIDED AGAINST by taking a POLICY of the RAILWAY PASSENGERS' ASSURANCE COMPANY,

HEAD OFFICE, 64, CORNHILL, LONDON, E.C.
WILLIAM J. VIAN, Secretary.
Railway Passengers' Assurance Company, empowered by Special Act of Parliament, 1849.

IRONWORKS.—TO BE LET or SOLD, the DERWENT IRONWORKS, at Workington, Cumberland, well situated at the Harbour and near the Railway Station, and in complete working order. They comprise two puddling furnaces, a steam hammer, and all the requisite machinery for manufacturing bar iron, of which 1,200 tons per week might be produced at once, with a capability of considerable increase. Coal is obtainable at very moderate rates in the immediate neighbourhood, and the well-known Hematite pig iron is produced on the spot. These works are well placed for the production of puddle steel; there is also a demand for bar iron in the district. They will be let ready for starting, or disposed of on moderate terms.—For further particulars apply to JAMES SPENCE, Esq. Liverpool; PETER CAMERON, Esq. Whitehaven; or to Messrs. DODD & SON, Workington, the latter of whom will show the premises.
N.B. The above property is freehold.
Whitehaven, November 14th, 1863.

TO ARCHITECTS, BUILDERS, RAILWAY CONTRACTORS, AUCTIONEERS, &c.—SPECIFICATIONS, CONTRACTS, ACCOUNTS, and every other description of DOCUMENTS, correctly and expeditiously COPIED, at 1*d*. per folio of seventy-two words, by FRY & SON, Law Stationers, Printers, and Lithographers, 13 and 14, South-square, Gray's-inn, W.C. Plans and drawings copied, enlarged, or reduced, on reasonable terms.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER." No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, November 21, 1863.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72–74, Bishopsgate Street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive exemption, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

72 74, Bishopsgate street Within, November, 1863.

NOTICE. — LONDON and WESTMINSTER BANK, LAMBETH BRANCH, 34, Mount Street — GEORGE TOZER, Local Manager. "The London and Westminster Bank having received notice from the Vestry of the Parish of Lambeth, that the Metropolitan Board of Works have directed that Mount-street, Lambeth, should hereafter be called Westminster Bridge Road, and numbered accordingly, hereby give notice, that from and after this date the business of the Lambeth Branch will be carried on at the same premises, but bearing the altered number and name of 31, WESTMINSTER BRIDGE ROAD, S. and all communications connected with that Branch are requested to be so addressed.—By order of the Board, WM. EWINGS, General Manager.

1, November 11th, 1863

SOCIETY of ARTS.—CANTOR LECTURES.—The following COURSES of LECTURES will be delivered during the Session. . .

"On the Operation of the existing Laws of Maritime Warfare on International Commerce," by G. W. Hastings, esq.; "On Flax as applied to Industry," by W. Burges, esq.; "Chemistry applied to the Arts," by Dr. F. Crace Calvert, F.R.S. Mr. Hastings's course, consisting of four lectures, will commence before Christmas; the Mr. "On the Law of Blockade," will be delivered on MONDAY evening, the 7th of DECEMBER, at EIGHT o'clock.

These Lectures are free to Members of the Society of Arts, each of whom has also the privilege of admitting two friends to each Lecture. The Wednesday Evening Meetings will be held as usual.—By order of the Council, P. LE NEVE FOSTER, Secretary.

2 November 25th, 1863.

BILLING'S PATENTS. CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have consequently reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr. TEYLER, 12, Abingdon-street, Westminster, who will also afford any information, he having been for many years associated with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

COMPETITIONS.

COMPETITIONS.—NEW CHURCH of ST. JOHN the EVANGELIST, London-road, Carlisle.—The Building Committee are prepared to receive PLANS for this CHURCH, which is to accommodate 1,000 persons, and to cost £6,000. Full information will be given on application made before DECEMBER 10 to the Secretaries, St. John's Church Committee, No. 6, Lowther-street, Carlisle.—All Plans must be sent in before JANUARY 15, 1864. Premiums of £50 and £30 respectively will be given for the Plans which the Committee consider the best and second best after the one they may ultimately select.

2 November 23, 1863.

GUTTA-PERCHA MILL-BANDS. The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent equal pliability and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water, and the facility with which the ends may be repaired, can be made in lengths of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta Percha Articles, such as Tubing, Soles, Pumping-kets, Fire Buckets, Bosses, Union joints, Ferules, Bottles, Bowls, Toilet trays, Curtain-rings, Galvanic Batteries, Tubbotype Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.

STEPHENS'S STAINS for WOOD.
A SUBSTITUTE for PAINT, and at HALF the COST.
Mr STEPHENS has been kindly permitted to make public the following extract from a letter addressed to him by the Rev. R. H. CHICHESTER, of Chittlehampton, near South Molton:—
"The effect produced by the Staining Fluid and Varnish has given such entire satisfaction that the parishioners have requested me to procure five times the quantity now paid for, in order to finish the church."
H. STEPHENS, Chemist, 18, St. Martin's-le-Grand, E.C. late of 54, Stamford-street, S.

WANTED, a very good second-hand STEAM-ENGINE, from 12 to 14 horse power. Either one or two cylinders, with or without boiler. To work an upright and circular saw mill. One with gear attached will be preferred, with all modern improvements.—Apply to GEORGE S. AMALL, Steam Saw Mills, Truro, Cornwall.

DAVID JONES, Bridge Ironworks, and HERBERT'S Park Ironworks, Bilston, Staffordshire, Manufacturer, under licence of the Patentee of MALLET'S PATENT BUCKLED IRON PLATES, for flooring, for railway and other bridges, viaducts, wharfs, &c. and for flooring, and other parts of fire-proof buildings, and various important structural uses. These plates form the lightest, strongest, most rigid, and durable flooring known. They were pronounced by the late Mr. Brunel, "the best bridge flooring extant." They have been adopted at the new bridge, Westminster, on the Indian railways, and in many other first class structures, by Messrs Page, Hawkshaw, Rendel, Stephenson, and other engineers, and for fire proof buildings by Government, the War Office, Metropolitan Board of Works, and other important uses. Specimens of the buckled Plates can be seen at Bull wharf, Upper Thames-street, London.—Applications for lithograph circulars, prices, and other information, as to supply of the plates, to be made to the Manufacturer, as above; or to ROBERT MALLET, Esq. C.E. the Patentee, 11, Bridge-street, Westminster.
N.B.—Manufacturers of Boiler Plates, Bridge and Ship Plates; also Sheet Iron of all kinds, and Rivet Iron of first quality.
Address, BRIDGE IRON WORKS, Bilston, Staffordshire.

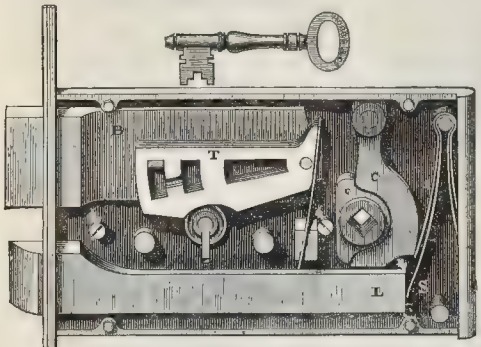
DRAUGHTLESS VENTILATION INFALLIBLY SECURED, BY



BOYLE'S PATENT DOUBLE LEVEL WINDOW VENTILATOR.

The most successful sanitary invention of the day. Architects, Builders, and the Trade should not fail to see it.

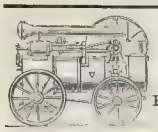
COMYN, CHING, & CO. (late Huxley & Ching),
23, LITTLE ST. ANDREW STREET, UPPER ST. MARTIN'S LANE, LONDON,
Sole Manufacturers. The Trade supplied on liberal terms.

HOBBS, HART, & CO.'S
MACHINE-MADE LOCKS AND STREET-DOOR LATCHES.

These Locks are recommended for all purposes requiring good ordinary security combined with economy of price and durability of wear; as, by means of machinery, a faultless accuracy is arrived at which by hand-labour would be impossible except at a greatly increased cost.

The security of these Locks consists in a series of Levers that have to be raised to unequal positions by the bits of the key before the bolts can pass. These will bear comparison with those at treble their cost.

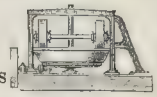
These Locks are made from two to five levers, and also in suits to differ, with master-keys to pass.



The retail prices for Cabinet purposes is from 2s. to 4s. each; for Room Doors, 4s. to 9s. 6d. each; Street Door Latches, 7s. 6d. to 18s. each.

The 2-bolt 4-lever Mortise, with Hobbs & Co.'s Patent Follower, price 8s.

HOBBS, HART, & CO.'S PATENT PROTECTOR LOCKS.



300 Guineas were offered in the late Exhibition to any one who could Pick these Locks in thirty days. Their speciality consists in their combining the two essentials of security, viz.—protection against picking, by means of their Patent Moveable Lever Protector, and protection against illicit tampering with the Lock through the key-hole, and also tampering with the key, by means of their Patent Nozzle Protector. These all-important principles are the special and peculiar features of HOBBS, HART, & CO.'S Patent Locks. These Locks vary in price from 10s. to 50s. each, with solid keys. For prices with changeable keys, see 16-paged Illustrated List of Locks, Iron Door Safes, &c.

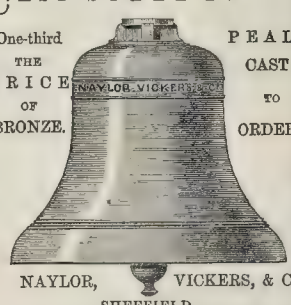
TO BUILDERS, JOINERS, CONTRACTORS, &c.

THE "GENERAL JOINER."

SAMUEL WORSSAM & CO. having long felt the importance of introducing a LABOUR-SAVING MACHINE, which by combining several operations at a moderate cost, should meet the requirements of builders and others engaged in the conversion of timber, beg to offer for this purpose their "General Joiner" as above, which in its present greatly improved form will, with 2 horse power, do the work of at least fifteen skilled joiners, in SAWING, CROSS CUTTING, and SQUARING, PLANING, and THICKNESSING, MORTISING, TENONING, GROOVING, TONGUEING, RABBETTING, BORING, BEADING, MOULDING, CHAMFERING, &c. &c. For priced illustrated circulars, apply to S. WORSSAM & CO. Saw-Mill Engineers, King's-road, Chelsea (sole manufacturers), where the "General Joiner," and samples of the work may be seen.

PRIZE MEDAL.
INTERNATIONAL EXHIBITION, 1862.



THOMAS ROBINSON
and SON,
ROCHDALE, near MANCHESTER,
PATENTEES,
AND
Makers of Sawing Planing, Moulding, and other Woodcutting Machinery.
IMPROVED VERTICAL SAW,
For Cutting out Sweeps and Circles.
Price 20*l.*

J. GURMAN,
Inventor and Patentee of a New SASH POCKET and Fittings,
For Weight and Balance Sashes, for Cleaning, Repairing, or Painting Windows
They can be taken out in a minute, and replaced in same time. Old Windows can be altered. Any person allowed to work the Patent, on purchasing the Patent Pockets and other Fittings of the PATENTEE, 4, ONSLOW ROAD, Southampton; or of Mr. G. BRADBURY, 11, GARLICK HILL, Cannon street, London, where Windows may be seen, and information obtained
Also of the following Agents
LIVERPOOL—Mr. T. C. OWEN, PRINCE'S BUILDINGS, NORTH JOHN STREET.
BRISTOL—Messrs. CHILCOTT & GARDINER, IRONMONGERS, JOHN STREET.
NEWCASTLE ON-TYNE—Mr T. DUNN, IRONMONGER, GRAY STREET.
EDINBURGH—Messrs. BELL & SON, IRONMONGERS, FREDERICK STREET.
BRIGHTON—Messrs. LANGWORTHY & REED, IRONMONGERS.
Windows may also be seen at the Kensington Museum, London.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.
THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.
J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)
WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

NUT PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Palaces and Chapels Royal, Sheets—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortice, and effects a kind of secure fastening, without any screw in the neck of the knob. Perfection guaranteed in both Locks and Furniture, if the Locks are of known manufacture
New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Ivories, &c. &c. ready to sign
THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS
A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.
**** Illustrations and Price lists sent on application.
WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.

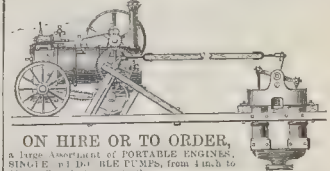
NAILS and IRONMONGERY from BIRMINGHAM direct.
Builders Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES.
A complete List of which will be forwarded upon application to
FRANCIS BIANCHI (late Blyth & Bianchi),
Nail Manufacturer and General Factor, BIRMINGHAM,
and 16, Gresham-street London, E.C

ROOFING METAL
(PATENTED'S PATENT or MARINE).
In sheets 2lb. and 3lb. per square foot, 9 feet long by 3 feet wide.
The most durable and economical metal for roofing.
Does not rust or decay under the action of the atmosphere or acids.
For price, particulars, &c. apply to the Manufacturers,
W. W. & R. JOHNSON & SONS,
WHITELEAD WORKS LIMEHOUSE, LONDON, E.

THE CHRONO-THERMAL, OR ECONOMIC STOVE.
THE SMALLEST WILL WARM A ROOM 20 feet square, with Welsh Stone Coal, at a cost not exceeding 2d. for twelve hours. Free from dust, smoke, or smell. Suitable in the larger sizes for halls, churches, and concert-rooms. Can be seen in operation at
LUCK, KENT, & CUMMINGS', Carpet Manufacturers, 4, Regent street, Waterloo-place, S.W.

CAUTION to ARCHITECTS and BUILDERS. In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE ACTION DOOR SPRINGS;
SMITH'S PATENT WEATHER-TIGHT WATER BAR; and SMITH'S PATENT WEATHER TIGHT CASEMENT FASTENING for FRENCH WINDOWS:
The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 68, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

FIRE-PROOF CONSTRUCTION.—
FOX & BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
12, YORK BUILDINGS, ADELPHI



CHUBB'S LOCKS,
with all the recent Improvements,
STRONG FIRE-PROOF SAFES, CASH AND DEED BOXES.
Complete Lists of Sizes and Prices may be had on Application
CHUBB and SON,
57, ST. PAUL'S CHURCH-YARD, LONDON,
28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

PATENT ASPHALTE CALDRON, for laying asphalte floors. Three times highly recommended by the Royal Agricultural Society. The cheapest and best kind of floor, impervious to wet, and vermin will not touch it.—Full particulars sent free by

Truss Stone ditto ..... 12s. to 18s.

Sheet of Designs sent free on application. Estimates for every description of Masonry.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

VENTILATION—PURE AIR.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not stopped when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 127 and 129 (late 117 and 118), Union-street Borough, London.

ADVANCES are made by the SOVEREIGN LIFE OFFICE, 48, St James's-street, London, of sums not exceeding 1,000*l.* to Officers and other persons resident in England, upon their assuring and giving two sureties for repayment by instalments in three years, at five per cent. interest.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100*l.* to 1,000*l.* upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and no advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

PENCILS, BLACK LEAD, and COLOURED CHALKS.
A. W. FABER'S POLYGRADE LEAD PENCILS, sold by all Stationers and Artists' Colourmen.
Sole Agents, HEINTZMANN & ROCHUSSEN, 9, Friday-street, E.C.

PARQUETS SOLIDAIRES.—HOWARD & SONS, 26 and 27, Berners-street, are prepared to supply Machine-made Patented Solid PARQUET FLOORS 50 per cent. cheaper than they have been yet offered. Illustrated Catalogues, plans, and estimates free.

TO INVENTORS.—All intending Patentees should procure the PRINTED INFORMATION regarding PATENTS—their cost, and mode of procedure to be adopted—issued gratis by the General Patent Company (Limited), 71, Fleet-street, London. ROBERT M. LATHAM, Secretary.

The Builder.

VOL. XXI.—No. 1086.

"Going Along." Venice.

ROM Verona the railway leads west and east, touching many of the principal towns in Northern Italy; on the one side, for example, Brescia, Bergamo, Milan, Vercelli, and so to Turin; and on the other, east, Vicenza, Padua, and Venice. What a world of wealth in art and story the mere names bring into the mind! A short line running south takes to Mantua, and others to Pavia, Piacenza, or Parma. Our faces, however, are turned east, and, passing Vicenza,—to be returned to hereafter,—we reach Venice by starlight, and get a glorious effect. The moon is on the water; the piazzetta is blazing with light; five hundred gondolas are waiting for their tenants; and the city again looks, as once it was,—

> "The pleasant place of all festivity,
> The revel of the earth, the masque of Italy."

Mind, we say *looks*; it only looks so: there is not much real festivity now amongst the Venetians in Venice. Yet to be there is to a stranger of itself a festivity, a feast of soul. It is the most romantic and poetical of cities: one of the most unhappy too; a storehouse of art; an example and a warning. Few persons go there once without resolving to see it again; and all know something about it whether they have been there or not. They remember, at any rate, what Canaletto, Turner, E. W. Cooke, and David Roberts have painted; what Shakspeare, Byron, Rogers, and Mr. Ruskin have written. They recollect of the secret ten and of the "Lion's mouth;" and who it was that "oft" was "rated" upon the Rialto: they murmur:—

> "The sea is in the broad, the narrow streets,
> Ebbing and flowing; and the salt sea-weed
> Clings to the marble of her palaces."

They have grieved with Otway over the woes of raving Belvidera; or, at the very least, remember a certain bridge which, according to the poet has, but in reality certainly has not,

> "A palace and a prison on *each* hand."

Venice is in truth "a fairy city of the heart," never to be forgotten by those who have seen it, and always longed for by those who have not. Who can forget, for example, to take one picture out of a dozen, a summer evening passed in the Piazza of St. Mark, sipping coffee at Florian's,—*Florian's*, of course; for, having strong feelings about "Independent Italy," we would no more ask a visitor to go to the *café* frequented by the Austrians, than would the Italians themselves,—or, loitering over an ice, while listening to the music of the military band in the centre of the Piazza,—perhaps the exquisite "Miserere," from the *Trovatore*, followed by the touching, "Ah! che la Morte," which for the moment might make one long for the calm and rest of death, and grieve indeed that it is so "tardy in its coming." There stands the Duomo, its variety of colours harmoniously blended in the dimming twilight; while the mighty Campanile lifts its pointed head into the blue sky, as if striving to reach the one large bright star immediately above its apex. Later comes a pleasant glide in a gondola, till long after dark, far out, where the hum of the city is lost, and the long line of lights at the water's edge alone points out where beautiful Venice sits: still a queen, though now widowed and mourning.

If in "going along" through other towns, we found it difficult to determine what to touch and what to leave alone, how shall we decide in Venice? A connected account of it is out of the question, and would be impertinent. Yet on every side rise themes for comment. We must confine ourselves, then, to notes of such matters as made the strongest impression, seem the least known, or perhaps afford the opportunity for giving an item of relevant information.

One of the most striking pictures that remain with us of our last visit was afforded by the interior of St. Mark's during a *fête* of the Virgin. Every portion of the immense edifice was crowded with worshippers sitting, standing, and lying, on every ledge, in every nook: a dignitary of the church, attended by several others, all richly garbed, was preaching to as many as could hear him; streams of those who could not pushed their way to the various chapels they preferred, and rays of light admitted by the small windows that alone illuminate it, touched here and there into brilliancy the golden ground of the enduring mosaics with which vaults, walls, and floor are covered. Not an inch of surface is there in that marvellous interior that does not display handwork and mind-work of one kind or another. The vaultings faced with archaic figures, columns of precious marbles with exquisitely sculptured capitals, bronze doors belonging to the year 1300, and some earlier; marble pavements, the rich screen of the high altar, and the goldsmith's work of the much-prized *pala*, are some of the wonderful features that come gradually into view. The solemn light, the multiplicity of remnants of various ages observable, the antiquity of the structure, its large proportions, richness, and resulting grandeur, fill the mind almost to oppression. As to dates and facts, every one knows them; suffice it that the building belongs to the tenth and eleventh centuries, must be regarded as Byzantine in style, notwithstanding demurrers, and that the mosaics range from the eleventh century to the eighteenth. Parts of the mosaics in the sacristy, especially some of the large figures in the lunettes and the heads in circles in the vaulting, are amongst the best in the building. The mosaics in the centre of the vaulting are not so good as those at the two ends. Mr. Clayton, with Signor Salviati, was carefully examining these when we last stood there; and we may hope that the Wolsey Chapel at Windsor, which is intended to be a permanent memorial of the royal children's love for England's Good Prince, their father, will be the better for that examination.

Sansovino's bronze door to the sacristy, and the bronze cover to the basin in the baptistery by two of his pupils, call for study, with much other sculpture and bronze work. In the door, Sansovino has introduced portrait busts of Titian, the profligate wit Pietro Aretino (who called himself "the friend of Titian and scourge of princes"),* of himself, and some others.

Full of enthusiasm and life, the genial Sansovino, who was a sculptor before he was an architect, lived in the enjoyment of his friendships and the pursuit of art till the 27th of November, 1570, when his years numbered ninety-one. He built, it will be remembered, the Library of St. Mark (we have something like the front of it in Pall-mall), the Loggia at the foot of the Campanile, the Cornaro Palace, and many other notable structures. He put an iron band round the great cupola of the duomo, which the workmen still call "Sansovino's girdle," to distinguish it from similar iron ties on the other cupolas. How Venice honoured artists is shown by the circumstance that when in a time of trouble it became necessary to impose an extraordinary tax on all classes alike, the senate exempted none from it but Titian and Sansovino; and when Sansovino died, Venice mourned.

Titian was buried in the church of Santa Maria dei Frari, where, ten years ago, an enormous and costly marble monument to his memory was completed. There is a view of it in one of our volumes. It includes a massive basement, a Corinthian colonnade or frontispiece above, a sitting statue of the painter, bas-reliefs of his works, and various allegorical statues at the sides; the whole wanting in sentiment and the devotional element, perhaps vainglorious, but still a clever work from a sculptor's point of view. The life of Titian, wonderful old man, ranged from 1477 to 1576,—like Sansovino's, a long one. It was an outbreak of the plague that carried him off. A law had been passed that during this visitation no person should be buried in the churches; but an exception was made in Titian's favour, and his body was borne in honour to the church of which we are speaking, where his burial-place was marked only by a plain marble slab, inscribed TIZIANO VECELLIO, until the erection of the modern monument, of which Zandomeneghi was the principal sculptor.

There is a very fine picture by Titian in the church, the Virgin seated with the Child, several figures of saints and others around, and an architectural back-ground. Again, the statue of St. Jerome, over one of the altars, executed by Alessandro Vittoria, gives in marble Titian's fine head.

The monument to Canova set up here is a repetition, with a difference, of the monument to the Archduchess Maria Christina, of Teschen, executed by him, and erected in St. Augustine's Church, in Vienna. As we said, however, when speaking of the original, this is a very inferior affair: Genius is sleeping, not grieving. Canova pure has no great force or sentiment, whatever there may be of beauty; but "Canova and water" is a weak thing indeed. There are some remarkable monuments of the fourteenth and fifteenth centuries in the church; a fine suspended terra-cotta monument, with groups in panels, and a pointed arch above, with angels playing, comes into the memory as a beautiful work. The design of the church itself is attributed to Nicolo Pisano, in the middle of the thirteenth century; and there is some sculpture at the west end, on the south side (a set of fine marble figures), attributed to the school of the Pisani, and which, if of that period, is very remarkable. We must pass Vivarini's pictures, a St. John ascribed to the delicate-handed Donatello, and other noteworthy features.

As the Frari has thus become Titian's mausoleum, so is the Church of St. Sebastian that of Paulo Veronese,—Cagliari the Splendid. This church is full of his works, and here his remains lie buried. It was his pictures in this church, illustrating the Book of Esther, that first brought him into notice in Venice; after which he was always immensely employed. One of his paintings here, "St. Sebastian exhorting Marcellius and Marcellianus to go bravely to Death for the Faith," has parts of rare beauty, and includes portraits of himself and members of his family. Sebastian in armour, and with a red flag in his hand, irresistibly calls to mind "Excelsior." The female figure, close to his left arm, looking up at him with tenderness and love in her sweet face, yet not stirring a hand to retain him from the path of duty, anxious to keep, yet fearing to check, suggests a story, and is "a joy for ever."

In another picture of his, the head of the Magdalen, looking up to the Cross in faith and love, is magnificent. In Paulo Veronese's works we have to overlook countless offences against chronology, fact, and propriety; but shall still find enough to admire in his power of invention, abounding life, and magnificent colouring.

* There is a splendid portrait of Aretino, by Titian, in the Munich Gallery.

England fortunately has some good specimens of his art in Trafalgar-square. We shall meet with many yet in Venice.

Paulo died on the 14th of May, 1588, when he was fifty-eight years old. A bust of him is set up in the church, and a tablet under it is thus inscribed: *Paulo Caliario Veronen pictori naturæ æmulo artis miraculo superstite fatis fama victuro.*

There is a fine monument here, of its class, by Sansovino, to whom also the façade of the church is attributed.

That we may bring together three of the great Venetian masters let us look for a temple to Tintoretto, Jacopo Robusti as he was christened, and which term, Robusti, certainly suggests his style of work much better than "Tintoretto," the designation that grew to him in youth because his father was a dyer. We shall find this temple not far from the Frari, namely, the Scuola di San Rocco, built by a fraternity of merchants between the years 1517 and 1550, a fraternity still in existence. They seem to have taken up Tintoretto specially, and the decoration of their great halls exhibits some of the best of this very unequal but still great painter's work. The walls and ceilings are covered with paintings. The "Crucifixion," by the same painter, in an adjoining apartment, includes portraits of Titian, Bonifazio of Verona, and himself. When Agostino Caracci showed Tintoretto his engraving of this picture the painter embraced him and insisted on being godfather to Agostino's son then born. In some cases he is equal to Titian or Michelangelo himself; in others he is, as Titian, a little jealous, called him, a mere dauber. Vasari says, "Of all the extraordinary geniuses that have practised the art of painting, for wild, capricious, extravagant, and fantastical inventions,—for furious impetuosity and boldness in the execution of his work,—there is none like Tintoret." Some of his contemporaries used to call him *Il Furioso*.

In this most interesting institution, the Scuola of St. Rock, there are also pictures by Titian, Pordenone, and others. When will "a company," a guild, or a charitable institution in our country give a commission to Maclise to cover the walls and ceilings of their meeting-place? It is to be regretted that the fraternity have not funds to put the pictures into a good state: some of them are much injured, and require immediate care. The building has a fine staircase, which would be finer if it were open, and could be seen in its entirety from above and below, instead of being walled up as it is on each side of the noble flight of steps.

Other fine specimens of the power of Tintoretto are seen in the Great Council Hall of the Doge's Palace. The Paradise, an enormous picture, called 84½ feet long and 34 feet in height, has become black and spotty. The ceiling of the hall is formed of pictures in enormous frames, coarse and magnificent. Amongst them is the grand and gorgeous Apotheosis of Venice, by Paulo Veronese. Around the walls is the frieze of Doges, with the black veil in lieu of Marino Falliero, of which every one knows. Jacopo Palma, Il Vicentina, Zucchero, and others, have pictures here, all illustrative of the Republic. Why are not the ancient Corporation of London able to point to some such glowing records of passages in their eventful history as are to be found in this noble apartment?

The Hall of Election,—the Sala dello Scrutinio,—contains, amongst other pictures, the Last Judgment, by Palma the younger (1544 to 1628), wherein the custodian points out, *con gusto*, a portrait of the artist's wife in Heaven, another of her in purgatory, and a third amongst the condemned, as showing the changes which occurred in the painter's opinion of her during the progress of the work! If he had reversed the order, we should have been better disposed to belief. The picture, though one of the best of this Palma's works, and Guido is reported to have said of him, "What a pity such a painter should ever be dead!" gave us no great pleasure. Palma the elder was a better man.

A large proportion of the churches in Venice are disappointing, noticeable rather for costliness than beauty. The Church of the Jesuits, for example, is the most remarkable exhibition of marble work that can be found. The walls and columns are of white marble, inlaid with verd-antique, to represent a sort of tapestry,—a sad misapplication of money and skill. There is marble drapery to the pulpit, and on the steps of the high altar is an imitation carpet! "Marble-ous!" was the exclamation. The Church of Gli Scalzi is another example of this "marble-ous" style, wonderful for its richness. Columns, statues, inlaid work, and costly pavements abound,—the contributions of various families. The chapel of Sebastian Venere is one of the finest in it. Every inch is covered with marble; even the doors are faced with mosaic work, and bronze decorations and gilding are lavishly employed.

We must break off, however, for the present: exertion here in the autumn is not easy. The sun is darting his "perpendicular rays;" the water positively trembles under them, and the improper lines about "the fishes beginning to sweat" come into memory. No wonder that men and boys, in the scantiest of bathing apparel are jumping off every bridge or ledge, and failing these off one another's backs, into the canals, and come up panting and screaming with enjoyment just under your gondola; or that one of our companions shouts out imploringly, every twenty minutes, "*acqua fresca*." Trying (we had almost written *frying*) as all this is, it nevertheless may be borne, supported by the belief that a country with a hot character ought to be seen in hot weather. What is more difficult to endure is the life in the bedroom. In Venice there are no horses, dogs, dust, or,—sleep after five in the morning at any season, because of the abounding bells; but in weather such as that to which we are referring it is hard to sleep at all; the necessity of closing tightly every window and door at night to keep out mosquitoes, and the want of a single hole for a change of air, even in the best rooms of the best houses, such, for example, as the Albergo dell' Europa, where the attentive Marchi presides, makes healthful breathing impossible. With even this, however, we will put up for thy sake, O Queen of the Adriatic! Correctly wrote Philippe de Commynes 368 years ago, when he said of Venice,—"*C'est la plus triumphante cité que j'aye jamais veue.*"

CRITICAL STATE OF STAMFORD.

About eighty-six miles north-west of London stands the goodly market-town, on the river Welland, known as Stamford. It is built upon a rock slightly cropping up above the surrounding landscape, upon the boundary line between the counties of Lincoln and Northampton. Approaching it from any direction the streets of stone houses, with large bay windows and dormers, out of the windings of which arise the towering steeples of the old parish churches, form a picture that long lingers in the memory of strangers. Those who passed through Stamford in the old coaching days retain distinct impressions of its grey, cleanly-looking, irregular, block-paved streets,—through which the coach bowled so cheerily,—that never get confused with remembrances of other towns passed on the same route. As it is a town of stone built upon a rock, so it endures in memory and reality alike: an up-hill and down-dale place full of nooks and corners, quaint old almshouses, pear-gardens, bee-gardens, ancient charities, with halls and chapels attached, which have traceried windows full of glittering diamond-shaped panes; with trees overhanging garden-walls into some of the narrow quiet ways; with six parish churches in it; with the river flowing so slowly through the sedges as though it was unwilling to water less pleasant places or was waiting to hear the chimes once more swung out over the house-tops; yet not without bustling business-streets, with good shops, and enough traffic in them. Adjoining Stamford is the richly-wooded park in which Queen Elizabeth's wise counsellor built Burleigh House; and in one of the parish churches the tomb of the great Cecil may be seen,—two shrines few tourists leave unvisited.

One of the judges visiting Stamford recently remarked that charity appeared to walk the town open-handed; and a love of the "good old times" is almost as apparent to the stranger. The old custom of Borough English or Borow English (a descent of lands or tenements to the youngest son, or, if the owner have no issue, to the youngest brother) is still retained here; and the old practice of bull-running has not long been discontinued. On the recurrence of every 13th of November down to that in 1839, it was the custom, time immemorial, after due notice by bell, for the very young and very old to keep out of the way, to turn a bull into the streets, and there to goad and teaze him till he took refuge in a furious flight. This run was so directed by his tormentors that the enraged animal was fain to take to the bridge over the Welland, where the *bullards* (the patrons of the sport) surrounded him, and by main force pushed him over the parapet into the river. When the bull, swimming, reached the shore, his tormentors were waiting for him, and continued the chase over adjacent meadows till their utter fatigue brought the pastime to a conclusion. He was then killed, and his flesh sold and roasted. 1840 saw the 13th of November pass unmarked by this ceremonial, nor is it likely to be revived in these days of extended consideration for the sufferings of animals; but the song of the bullards, with which the town rang, will never be forgotten.

In architectural matters, there is a spirit of appreciation to be seen that is very pleasant. In a chemist's shop in one of the main streets there is a stone moulded archway just within one of the large glass windows: this is the doorway of a Mediæval and probably monastic building that once occupied the site. This clever bit of conservation is only one among many curiosities in Stamford.

Although it is a market town, there is no regular market-place. There are, however, several places where the houses are set back, and leave wide open spaces in which some of the market business is carried on. In one of these, Red Lion-square, there is set back among the houses a covered market-house for butter and eggs, wisely located there in recent times in preference to placing it in the centre of the square, where it would have blocked up the approach to All Saints' Church. In another, also in a line with the houses, there is a new corn-exchange, that may be called remarkable among its compeers for its cheap and tasteful internal decorations in distemper. In a third, on St. Peter's-hill, is a new Mechanics' Institution and Museum. The churches are kept in repair; new calaises are building; and, generally speaking, there is as much modern vitality, intelligence, and energy in the town as there is picturesque antiquity. Except in one very important matter.

We have said Stamford is built upon a rock. This foundation is riddled with cesspools. These cesspools are sunk to a depth which is only determined by the distance downwards at which a fissure is found. Through these fissures it is supposed that the liquid portions of the sewage will escape. It will scarcely be credited that, at the present day, not only is this mode of disposing of the sewage countenanced by the authorities, but the conveyance of it into the public sewers is absolutely forbidden. They contend that the sewers are intended only for surface-waters. And there are not wanting staid persons who affirm that they have had opportunities of viewing the condition of old cesspools that had probably not been touched since they were first formed, perhaps, two centuries ago; and that these, when uncovered, were *empty*, the contents having made their own way through the fissures. *Where!*

On the 23rd ultimo, reports the *Lincolnshire Express*, Mr. Laxton applied to the local Improvement Committee, on behalf of the trustees of the new Roman Catholic Church, with residences now in course of erection, for permission to run two sewers from the building in question into the public sewer, as there were no other means of getting rid of the usual offensive matter. The chairman replied that, only a fortnight ago, they refused to allow a person to drain his cesspool into the public sewer. Mr. Tebbutt said his opinion about drainage was, that the public sewers were made to accommodate the public. Mr. J. Simpson said,—"Nothing of the sort. The public sewers were only intended for the surface water." Mr. Tebbutt said *it was impossible now to sink wells in some parts of the town without the water*

becoming immediately polluted by the contents of an adjoining cesspool flowing into them; and if they compelled all parties to sink cesspools on their own premises, which they would do by refusing to grant permission to run the offensive matter from their dwellings into the public sewer, they would pollute the water in every well in Stamford. Mr. Laxton pressed his application by declaring that, if permission were granted, the work should be done under the superintendence of the surveyor, and to the satisfaction of the commissioners; but after further discussion he was unable to carry his point. Not even when Mr. Michelson came to the rescue and said he was *quite satisfied that the present system of cesspools had poisoned half the wells in the town, and had been productive of disease*, was the determination of the majority of the committee shaken. The Roman Catholic establishment must be provided with a cesspool like every other building, the public sewers not being intended for sewage.

Now, Stamford must either be, geologically speaking, one of the wonders of the world, or the town is in an unsanitary condition that the progress of time will render perilous. Where does the sewage that escapes through the fissures in the cesspools go to, if not into the neighbouring wells and slowly-flowing river?

As it is acknowledged to be but of little use to put a new lock upon a stable-door after the steed has been stolen, it would be well if those placed in authority would inquire into these startling conditions while there is yet time to prevent a visitation of the zymotic ills flesh is heir to under given circumstances. Does Stamford possess the low mortality rate that the unusual advantages of its site and contiguity to abundance of good building materials should insure it? Is it, in a word, as it ought to be, one of the healthiest spots in England? Pleasant are the streets of Stamford, with bay and dormer windows here and there breaking into the perspectives, with the grey church towers overlooking all; and pleasant are the surroundings of Stamford, with their fine village churches, recessed in clusters of leafage, each within a couple of miles of the town; and pleasant, too, are the scented pear-gardens, and the bee-gardens, and the lozenge-paned houses of charity, and the slowly flowing river, lapping among the sedges; but of what avail are these if all the wells are gradually becoming polluted with the percolations from cesspools; and the inhabitants thus run the risk of drinking poisoned water?

PRACTICAL REMARKS ON SCAGLIOLA.

A MATERIAL which has long been confined to the mansion, but, through inventive genius and enterprise, becomes more available, so that the builder can adopt it in second or even third-rate houses, must have certain recommendations in itself. Such an article may be found in Scagliola. Its manufacture has generally been under the restraint of rules, and even prejudices, and has been confined to the most rigid methods, locked up in secrecy, and assuming a mystery. It possesses great beauty, and is capable of affording the richest embellishments in architecture. The advantages of its use are very obvious. It may be adapted to so many forms in the interior decoration of houses, that it might take the place of the most durable material now in use; and where halls and staircases have been painted, grained, and varnished, upon well-plastered walls, scagliola if used would retain its beauty, with an occasional cleaning, as long as the house could stand. Good scagliola has, as yet, been found too expensive for any but first-rate houses; while a bad and worthless article under the same name has filled the auction-rooms and brokers'-shops at a rate quite disproportioned to the well-manufactured ornament of the palace and club-house. This is no argument in favour of the practicability of its more general use; in fact, it speaks against it; as, when we pay less than the standard price and get worthless rubbish in place of a useful and decorative commodity, the inference would be, that the good quality cannot be produced at a lower rate, and that the expense of producing it cannot be lessened; or that the want of competition sustains the price. These two propositions are offered to the contemplative genius of the practical reader. The adduced fact of the sale of the inferior article at so low a price will dispel the probability of the latter proposition, and strengthen the truth of the former; while the attendant condition will suggest itself, namely, that the first proposition mainly depends upon the supposition that the manufacture of scagliola has hitherto been in the hands of those who were guided by the same principles of working, and therefore subject to the same heavy expenses. And there is some reason in this conclusion; but yet it has not been so at all times. Attempts at a reduction have been made; but only in particular cases, and not in scagliola generally. There are parts in the process of manufacture which a practical man, acquainted with the application of machinery, and the chemical properties of the old material, with the introduction of new colours and dyes for producing the blended tints of the marble by frescoing on the surface, could make opportunities for the experimentalist in this part and in the method of obtaining a hard fine surface susceptible of a polish.

Now that these remarks may be profitably accounted as hints and helps to the inventive practitioner, it will be hardly necessary to show the advantages of a good and cheap scagliola. Quoting the expression uttered by a member of a public office, when seeing scagliola columns being erected in the principal room of the building,—"I would," said he, "have preferred the walls and architraves being of the same kind, leaving the ceiling only for the painters to bombard us out with their scaffolding, making the delay but a few days instead of weeks." And referring again to a gentleman who had his staircase walls plastered with mastic to be ready for immediate painting and graining, might not he be justified in regretting that at a trifling increase of expense he might have adopted scagliola, and that the thought had not occurred to him previously to the commencement? The opinion of these two persons was founded upon the fact of scagliola requiring but a small amount of time and expense for renovation and repair compared with repainting and varnishing. But there is no better recommendation for its use than to enumerate the great variety of its applications. Scagliola in skilful hands can be produced in every variety of shade and colour; in every imaginable pattern and diversity of arrangement; and in an almost unlimited manifold change of form and size, from a lady's brooch to the superficial area of a large flank of a wall.

It is made with plaster of Paris, or any fine uncoloured cement which is free from grit. When wetted to a consistency that may easily be worked with a trowel on a slab of stone or slate, the colours are introduced, dividing the white mass into portions for each shade, and kneading, with the addition of dry composition, colours into some and water into others: these parts are worked up separately, to produce either apparent blocks or veins in the pattern; then, by a judicious combination of block and vein, so arranged that the mass may be cut into slices and present a veined pattern: these slices may be either used to face a mould or laid on a prepared ground.

The best scagliola has hitherto been made of plaster of Paris, as already stated,—the coarse making the groundwork, and the superfine the veneer. To keep the plaster from setting too quickly, it may have the following mixture well sifted among it. As much ox-gall worked up with slaked lime as will allow it to be worked with a trowel, allowed to dry, and then powdered: this in proportion of 1 to 10 in plaster will keep it soft for two hours. This, with a slight colouring, and mixed with sand, would make a good cement for imitating stone in walls, piers, and mouldings, and would be well adapted for the interior of churches. The colour should be ground fine while wet, and mixed in with the gall and lime before being put to dry. Burnt Turkey umber, or terra de Siena, with a little blue black, would answer the purpose well. A sample was very effectually made on the wall of a workshop in London. The most simple method of retaining the plaster from setting for scagliola is to dissolve ¼lb. of the best glue in one gallon of water, and use the liquid for wetting with. A level surface is wrought when the veneer is left from the trowel, and set with planes having a toothed iron set at an angle of 70° with the surface, so that it acts more as a scraping than a cutting instrument. The surface is brought finer by the friction of soft grit stones, well sluiced all the time with water—snake stone coming in for the finish of this part of the process. The face, though fine, is now very porous, and requires some thin mixture of coloured plaster brushed and well trowelled on; when this mixture is set, a new face is produced by snaking down, and the process repeated until friction will produce a polish; allowing time for drying between each application to obtain a hardened as well as a fine surface. This is the outline of routine pursued in the best scagliola work.

In venturing upon a description of the mode adopted in the execution of scagliola, it is necessary to recount the circumstances which give rise to the diversity in the operation. In walls where little room is allowed for thickness, the ground or pricking up (which should never be less than ¾ inch in substance), is trowelled on to the brickwork, having a good key to hold the plaster on account of its tendency to warp and expand: where room is allowed, batten and lath are preferable to receive the pricking up, unless slabs have been made ready for screwing to plugs or timber fixed for the purpose. Columns are sometimes required to contain an iron core to support a weight above: these cores are mostly put up with the building, and the scagliola worked upon a wooden skeleton surrounding the iron core. The ground is floated to two moulds fixed for the time, one at top and the other at bottom of the shaft: the veneer is planed up and down to the curve, and the mouldings cast in a mould, and fixed on with coloured plaster before polishing commences. Or, the column may be worked in a lathe in the shop by constructing the skeleton in such a way as to admit the column to be cut either in two equal parts, or one quarter out, the parts of the skeleton being pegged together instead of nailed, and with the centre easily removed, allowing space for the iron core. When the column is polished and about to be fixed, the parts are separated with a saw, and when again placed together, brass cramps should cross the joint at intervals of about 3 feet apart. Some labour, skill, and patience are required to make good the joint and polish it. Where floors are laid at the sides of halls, or in parts for ornament more than use, plaster alone will make a scagliola hard enough for the purpose; but when a more durable floor is wanted, subject to some hard usage, it will be necessary to introduce into the scagliola pieces of marble, alabaster, or broken stoneware, which may be so judiciously arranged as to add to the beauty of the design. It is always best to have the hardening material broken into pieces small enough to work in while the greater medium is in a soft consistency, the whole will thus form a mechanical combination, having from the absorbent qualities of the harder substances some affinity for the wet portion. For tables, pedestals, vases, or any work which may come near the eye when completed, a finer face should be sought in polishing. Good Turkey stones or Dutch rushes will assist to do this, by using them in facing instead of snake stone; and in imitations of marble of a dark colour, the plaster should be sifted two or three times to remove the coarser grains, which would appear as small specks of white in the midst of the dark colours when the polishing is completed. Handsome tables in scagliola, suitable for the hall or drawing-room, and counters for shops, may be made in pieces, and fixed together with iron rods passing through the centres of the supports, the iron rods having screw threads cut at the ends to receive a nut to hold the whole together. Scagliola slabs on cabinets or gilded standards have been successfully made for many years. Circular pedestals are made upon an iron spindle, with a flange with holes for screws. Suppose the pedestal to be 4 feet high on a square plinth, 2½ inches thick, and a Corinthian base of the same colour as the shaft. The diameter of the shaft to be 1 foot. Let five pieces of 1-inch deal board be cut 10 inches diameter, with a hole in the centre of each exactly to fit the spindle; then arrange these pieces on the spindle at equal distances apart, to be 3 feet 8½ inches from one extremity to the other, and fasten one for the bottom to the flange on the spindle. Nail some ½-inch laths pretty close to each other on to the circular pieces of board, and some across the top one to form a key. The spindle running on bearers will give a rotary motion to the skeleton, and a mould fixed ¼ inch from the laths would float the ground with the base moulding; then give a roughness to the ground for a key for the veneer, and cast the square plinth in a mould, which may be polished apart, and when the whole is ready can be fixed to the pedestal with screws into the board at the bottom. Vases are turned upon a similar spindle with a core of plaster screwed to the flange in the form of a parabola, to give the shape of the hollow or inside. On this core a covering of veneer is laid and allowed to set matching the outside veneer of the vase. This first veneer is roughed to form a key for a thickness of coarse plaster, which is floated to a mould screwed to the rest of the lathe: this, too, is roughed, and then veneered. Like the circular pedestal it is turned with steel tools to the shape required. A great number of ornamental scagliola vases were manufactured about thirty years since, and sold readily, but not at a great profit.

The most profitable part of the manufacture, then, as it always will be, was the execution of work in large masses; and in pursuing the subject it appears better to refer to jobs of some extent and which have been finished many years. Scagliola, then, is not a new introduction into buildings. It is coeval with the manufacture of plaster of Paris. The more modern productions only will be noticed here. The first specimen referred to was executed forty-five years since in the house of the Duke of Northumberland, Charing-cross, London. The walls of the staircase are in imitation of Giallo antique, relieved with Corinthian pilasters in verd-antique and bronzed capitals. A music gallery is formed in the wall opposite to the central flight of steps in porphyry. The whole is magnificent; yet there is one to excel it not far distant, executed by the same workmen and in nearly the same manner. At the mansion built for the Duke of York, now held by the Duke of Sutherland, in St. James's Park, London, there is a most beautiful sample, comprising walls of staircase in Giallo antique, architraves of doorways, and fluted columns supporting the roof, in granite, and balustrades richly moulded in Brocatello. Some idea may be formed of the splendour of this apartment by conceiving a room 50 feet square, with the walls, galleries, and columns rising with a highly polished surface from the floor to the ceiling. The walls of the staircase in what was Crockford's Clubhouse, St. James's-street, London, were done about the same time, but upon slabs of slate half an inch thick, of uniform superficies, sawn on the surface with cuts about one-eighth of an inch deep, to form a key for the ground of the scagliola; and when the slabs were covered and fit for polishing they were screwed on to battens fixed to the wall. The scagliola walls on the grand staircase in Buckingham Palace were done upon lath work, and were of a very pale granite pattern. From some cause, a stain, as of rust, showed itself upon the surface after the polishing, supposed to arise from a saline deposit, not in the scagliola originally, but lodged in that spot through the carelessness of the workpeople employed above: this took up strongly with the oxide of iron thrown off from the nails and clamps, and impregnated the material throughout. This wall is now painted a flat stone colour.

The walls of a hall and staircase of a house at Hill Head, near Glasgow, were covered with scagliola slabs equal in size to represent courses. These slabs were cast in a frame upon a level bench, the veneer being laid in first and then backed with coarse plaster bedding in thin pieces of slate, to strengthen and keep from warping: these slabs were cast to have a groove round the edges, to form a groove for fixing: this fixing was done by inserting painted iron clamps into the upper edge of the slabs, and screwing into horizontal battens, bedding with coloured plaster edge to edge as the work proceeded. The planing, gritting, and polishing were done after the fixing. The walls of the staircase at the Reform Clubhouse are worked on the bricks: they are beautifully panelled, moulded, and inlaid. The groundwork being prepared, straight laths were nailed on to give the boundary of the various coloured bands, so that the veneer in each case was allowed to set before the lath was removed. Among the most beautiful specimens of scagliola colouring may be mentioned eight in imitation of jasper which were done above half a century since in the house now occupied by Lord Dover, Whitehall, London. Twenty-seven varied tints may be counted in a square foot on the surface. In the throne-room and drawing-room in Buckingham Palace are ranges of columns of a bright scarlet colour, having a mixture of soft ore in its medium, and some rich blue pillars in imitation of lapis lazuli. The introduction of metallic ore was not a new principle, for it has been used in the imitations before as well as in that of granite. Nearly all the large clubhouses in London contain columns worked upon a wooden skeleton of ribs and laths, with a central timber at each end so constructed as to hold firmly a long iron chuck for turning. The square pillars and pilasters are formed similarly, a strong frame of timberwork being covered with ¼-inch sawn laths, and covered with ⅝-inch of coarse plaster and ⅛-inch veneer. Octagon and round columns in porphyry were formed upon stone supports at Raeby Castle, and the fluted columns supporting the gallery and roof of the saloon in the Reform Clubhouse, London, are all upon stone. The fluted three-quarter columns in the drawing-room and coffee-room were cast in three lengths, each backed with tiles bedded in coarse plaster: the tiles made for the purpose were flat, and roughed for key, 9 inches by 3 inches: stays of wood were placed across near the opening at the back to prevent warping. It must be admitted that the pattern, which was fine and indefinite, much favoured this method, which was a decidedly cheap one. There are some handsome edifices in the city of London which are richly adorned with scagliola. Among these may be named Salters' Hall, Goldsmiths' Hall, Fishmongers' Hall, and Royal Exchange. Some few shops are worthy of notice, such as Everington's, on Ludgate-hill, which has been done thirty years; and, at a trifling cost per year, looks now as good as new; Hitchcock's, St. Paul's-churchyard; Moses's, Aldgate; and Brown's, Fenchurch-street. It may be remarked that scagliola has entered but little into church architecture. A few instances can be cited. In St. Philip's, Waterloo-place, London, are columns standing round the front of the gallery to support the roof. These were made with strong timber cores to take a weight. Over the altar in St. Pancras new church are some verd-antique columns. St. Mary's, Islington, has some yellow antique pilasters on the wall at the east end. The church at Wilton, Wilts, has some black and gold columns in Keene's cement worked upon stone, and two twisted columns in plaster in the chancel. In a church at Grinstead are some inlaid facings to chancel and altar steps corresponding with the tile paving: they bear inscriptions in Early English letters. Among scagliola floors are reckoned one at Sion House, Isleworth, where, in 1830, a floor which had been down seventy years was taken up to be replaced with a new one richly inlaid, and composed entirely of plaster. The Athenæum Club House, London, is paved in the hall with scagliola. Crewe Hall Cheshire, has a spacious area of scagliola flooring. At the seat of the late Mr. T. Hope, Dorking, Surrey, is a floor with panels of ancient mosaic inserted in the design; and at this gentleman's house in London is a very old floor. There are also in this last-named mansion four fluted Doric columns in a plain stone colour, bearing a slight polish. Miscellaneous decorations in scagliola may be found in the Reform and Conservative Club houses, London; in the house of Mr. Jackson, Birkenhead; in Preston Hall, Aylesford, Kent; and in the Fitzwilliam Museum, Cambridge. The instances above enumerated are characterized as being executions of a first-rate order, and will, therefore, offer an opportunity for the critic or the copyer to exercise his faculties, or will afford suggestions to the manufacturers or the amateur. It may be also added that the colours most used are, for yellow, terra Siena, deep yellow, and orange chrome and king's yellow; for blue, indigo, prussiate blue, and ultra marine; for reds, vermillion, Venetian red, Indian and washed red, and purple brown; brown, burnt umber and burnt Siena: green is made from indigo and king's yellow; black from the best vegetable or lamp-black.

J. A.

RAILWAY PRACTICE IN THE EAST.*

We are always favourably impressed by a technical work well furnished with illustrations. The real language of engineering is graphic delineation,—no description in words, however excellent, however clear, can equal in efficiency a combination of lines. The drawing-pen of an engineer is the true interpreter of his ideas; and, according as his drawings are clear and accurate, the answers of the operative in the shape of work will respond to the demands of the engineer himself, and of his clients. The language of graphic delineation is a universal tongue, intelligible alike to the man of science and to the meanest labourer; no translation is required to expound it,—a good print or drawing can be understood in all countries. The character of the volumes before us will thus be very fairly defined by an examination of the ninety-one well-executed plates forming the main portion of the works. Indeed, the letter-press of 201 pages, although good of itself, is only of a secondary importance.

We have thus some twenty-four plates of road bridges, bridges of masonry, timber, and iron plate, embodying most of the constructions required in ordinary practice, all of which have been practically carried out. Culverts of different sizes, ranging from 6 feet to 12 feet, are illustrated in about eight plates. Six plates fully describe different descriptions of stations of brick and stone, or of timber merely. Docks, dock walls, locks, and entrance chambers; sluices, and landing-piers, and the varied rolling stock and mechanical fixed plant of a railway, such as gates, level crossings, cattle-pens, cranes, permanent way, are all fully illustrated. The plates are well lithographed, their light and shade lines being almost as clean as those formed by the drawing-pen of a practical draughtsman. We should like to see more centre lines, which, when well done, add considerably to the usefulness and intelligibility of a drawing or of its lithographed copy. The titles of the plates are given both in French and in English. We believe that a French translation of the work has lately been published in Paris. The dimensions, however, are given in the English foot measure alone, but scales in both the measures are furnished to each lithograph. It would have been convenient for most readers if complete tables of the reciprocative values of the French mètre and English foot had been given at the end of the book. We wonder if the time will come when such tables will be no longer required, and the very convenient mètre and its divisions be universally used by engineers. The plates devoted to mechanical engineering are not so good as the others, as they are neither so completely finished, nor so fully dimensioned. An engineering drawing can never have too many dimensions, and every figure gives an additional and higher practical value to a plate. We are sorry to say that these excellent lithographs are only very meagrely referred to by the author in the text, which, in fact, seems to have been written with scarcely any regard being had to the illustrations.

Although the work is nominally a second portion of Mr. Haskoll's previous book on "Railway Construction," it is in reality mainly devoted to the railway practice in the East, and more especially in the Levant. The author's practice does not appear to have led him into the East Indies, and he scarcely alludes to that already vast and daily-extending field for the practice of railway engineering. Mr. Haskoll is evidently an experienced and able civil engineer; and thus, even at second-hand, some allusion to East Indian practice would have been very welcome to almost all the readers of his work. The three first chapters are devoted to what may be termed, in the words of George Stephenson, "the engineering of men" in the East—everywhere, according to the same authority, the most difficult of all branches of engineering. The various arrangements required to meet the inferior labour of Eastern countries,—the importance of acquiring local information before determining on the character of the works,—the necessity for speedily commencing the works in the interim,—the various arrangements to be adopted to meet the exigencies of the climate, and of the other local conditions, are very carefully and, indeed, ably treated on. The two following chapters are severally copies of the general "*Cahier des Charges*, or Specification of Conditions relative to the Construction and Concession of Railways in Turkey," and of the "Articles of Agreement for the Concession of the Railway from Smyrna to Aïdin, in Asia Minor." Both documents, although like all papers of this official description, very dull to read, will be of great value to many readers.

We have next a complete working specification and form of contract for a line of railway undertaken abroad. The last seven chapters treat on the engineering properly so called—the engineering of matter—of the East. The nature of the works required to meet the peculiarly heavy rainfall of the East,—the cuttings and permanent way,—temporary and fixed stations,—roads and tramways, — plate, lattice, and trellis girder bridges,—docks and jetties,—are thoroughly examined from the point of view of their adaptations to the peculiar requirements of all high thermometric repairs. The style of the author, although upon the whole of a very fair kind, in many instances wants polish and clearness; and it assumes a somewhat sententious tone from the different chapters being cut up into a number of exceedingly short paragraphs. He also sometimes repeats himself, as when he thrice informs the reader (pp. 9, 115, and 117) that he noticed during his stay in Asia Minor, a rainfall of 10 inches in one night.

At first sight it did not appear that the transplanting of European railway engineering into a hot Eastern country would involve much change in ordinary European practice. This superficial view, however, has led to much disappointment and loss of money. Merely the heat of the climate is of itself a source of special difficulties,

* Railway Construction. Second Series. Also Railways in Europe, the East, and all High Thermometrical Regions: a Practical Treatise on their Establishment, the Direction of the Works, Material and Labour, Earthworks, Works of Art, and Secondary Works. By W. Davis Haskoll, late one of the Resident Engineers on the Smyrna and Aidin Railway, and of the Great Western and Brentford Railway and Dock, &c. In two vols. London Atchley & Co. 1863.

as it induces a demoralization of imported European labour, and even the inferior native labourers are much affected by the fever peculiar to most Eastern countries, and often caused merely by the malaria arising from the fresh earthworks. Mr. Haskoll urgently points to the necessity for the establishment of comfortable camps and labour stations, to be erected on rising grounds, and in the vicinity of water. The heavy rainfall of Eastern climates also requires special provisions in the construction of the bridges and culverts. "Thus, a 10-inch fall for twelve hours per mile square, would give 530 cubic yards to carry off per minute;" and this quantity of water, running with great velocity, the walls and foundations of the bridge or culvert will require more attention than any other portions.

For the same reasons, the side drains of the cuttings must be of extra capacity, and the embankments of an extra width; while the surfaces of the slopes should be trenched in a direction parallel to the line. All the wood used in the form of sleepers and of piling must be carefully creosoted, the necessity for which is much greater in the East than with us.

Even by disregarding the climacteric conditions, and by carrying ourselves back to the time when no railways were in existence, the comparison between European and Eastern railway practice will be scarcely brought nearer. Material of all kinds, workshops already established, easy means of communication, and plenty of house-room for the workmen, were all within reach of the pioneers of railways in Europe. "If we now take a map of France or England, and draw a line from any town on the coast to some hundred miles or so inland, consider all constructed railways and canals as effaced, as well as nine-tenths of the towns and roads for some thirty or forty miles on each side of the proposed line of railway, we shall be able to form some idea of many of the conditions under which railways have to be established in the East." The labour is also necessarily very inferior, whether common or skilled; and even the rude masons and carpenters are very scarce. All fitters must come from Europe. Most of the men are very inferior in vigour to Europeans, and all require to be taught. Mr. Haskoll very sensibly advises a reduction in the size and weight of the tools, particularly of the wheel-barrows. He also recommends that the men should "undergo a month's careful and patient training on the works, under the superintendence of good European workmen, and allowed to do nothing but good work."

Time should be given to the Eastern workman to learn before requiring much work from him. The book contains many excellent suggestions like these,—such suggestions that could only proceed from an engineer practically acquainted with the novel conditions of Eastern railway practice.

FOREIGN ARCHITECTURAL AND FINE ART SERIALS.

Recherches sur l'Architecture du Moyen Age et de la Renaissance à Lyon et dans les Départements Limitrophes. Par P. Martin, Architecte, Membre de la Société Française pour la Conservation des Monuments Historiques, de la Société Linnéenne, de la Société Littéraire, et de la Société Académique d'Architecture de Lyon. Numéro 7 et 8. Lyon: Imprimerie de Louis Perrin. 1863.

THE Mediæval Renaissance architecture of Lyons is elucidated by a description of the church and priory *de Salles*, in the present number of this quarto, on local antiquities. The date of the foundation of this religious house is not certain; but it is known that the Sire de Beaujeu instituted an asylum for the daughters of nobles, who were afterwards transferred to the *Prieuré de Salles*. This was at the close of the eleventh century, when the country suffered much from the expenditure of treasure and loss of life caused by the Crusades. Many daughters of nobles found themselves without a home; and this essential was generously provided for them by the Sire de Beaujeu, in the Isle of Grelouge. They adopted the rules of the Benedictine order, and took the title of *Chanoinesses*. It was in the fifteenth century that frequent inundations caused their representatives to retreat to the priory in question, of which they were dependants. Intercalated with the text are the plans of the church, the façade, one of the figures painted in the Chapter-house, and the armorial bearings of one of the *Chanoinesses comtesses*. The six plates show the details of a portal, an elevation and plan of the Hôtel Rue de la Charité, a façade in the Rue Juiverie, showing a well-staircase open to the court, a chimney-piece in the Rue Tramassac, a *porte d'allée* in the same street, a massive doorway, fragments of tiling, an ornamented lock, &c.

Die Renaissance in Italien. Architektonisches Skizzenbuck von Carl Timler, nebst erläuterndem Text. 111 Lieferung. Leipzig: T. O. Weigel.

The architectural sketch-book of Herr Carl Timler, of Leipsic, furnishes the subjects for an elegant folio serial. Though so-called sketches, the illustrations are carefully engraved outlines or views of specimens of the Italian Renaissance. The parts under review contain plates of a doorway from a church in Venice; a font from the Cathedral of Sienna; a fountain in Rome; the cloisters of the Certosa, in Pavia; the cloisters of S. Maria della Pace, in Rome; and candelabra from the Uffizii Gallery of Florence. They are nearly all drawn to scale, and are so far practically useful for reference. Herr Timler takes a wide range for his subjects when he can give in one part of his work illustrations from Venice, Rome, Sienna, Pavia, and Florence; and to Leipsig are we indebted for the collection of the whole.

L'Art Architectural en France depuis François I. jusqu'à Louis XIV.: Motifs de Décoration Intérieure et Extérieure dessinés d'après des Modèles, exécutés et inédits des principales Epoques de la Renaissance, comprenant Lambris, Plafonds, Voutes, Cheminées, Portes, Fenêtres, Escaliers, Grilles, Stalles, Autels, Chaires à Prêcher, Confessionnaux, Tombeaux, Vases, Candélabres, etc., etc. Par Eugène Rouyer, Architecte, Ancien Inspecteur aux Travaux du Louvre. Texte par Alfred Darcel, Attaché à la Conservation des Musées Impériaux, Correspondant du Comité des Monuments Historiques. Livraisons 51, 52, 53. Paris: Noblet & Baudry, Libraires-éditeurs, 15, Rue des Saints-Pères; Liéges: Même Maison, Place Saint-Paul, 6. 1863.

Here we have again three numbers condensed into one of a work on French architecture. After looking at that issued by the Government, this appears to much disadvantage; while, on the other hand, it possesses the advantage of being but a third of the price. It is a fashion among French serialists to reserve their text to the last few numbers; consequently, the great bulk of their works is published as mere sheets of drawings. The Palace of Versailles, the Hôtel des Postes, Paris, and the Pavillon des Arquebusiers à Soissons, are selected to furnish the details shown in the present number. An elevation of part of the Salon de la Guerre, at Versailles, showing a doorway, the fireplace, with huge oval-framed painting over it, and a portion of the skiff-shaped ceiling, vividly illustrates the luxurious profusion of ornament in the Louis Quatorze period,—figures, foliage, gilding, painting, carving, marbles, cyphers, devices, everywhere without a plain resting-place for the sole of a fly's foot.

La Renaissance Monumentale en France: Spécimens de Composition et d'Ornementation Architectoniques empruntés aux Edifices construits depuis le Règne de Charles VIII. jusqu'à celui de Louis XIV. Par Adolphe Berty. Livraisons 44, 45. 1862. Paris. Gide, Libraire-éditeur, 5, Rue Bonaparte.

Owing to the prevailing mode of issuing the plates of an illustrated work without letter-press description and the text in the last few numbers, the text and illustrations continue irrespective of each other to the end. In the numbers of M. Berty's specimens of French architectural ornament we have descriptions of the bell-tower of the cathedral, the tomb of the sons of Charles VIII., and the fountain at Beaune-Semblançay, at Tours, of the *Hôtel à Assezat*, and house in the street called Saint-Rome, at Toulouse, of the Château de Chenonceaux, side by side with illustrations of details from the Château de Bournazel, the church at Tillsloy, and the little gallery of the Louvre. There is also a perspective view of part of the Louvre taken from an engraving by D'Israël Sylvestre, which shows us old Paris as plainly as we shall ever see it more. As the Renaissance style is still the vehicle for much French feeling, this work will doubtless find a sphere in France.

Histoire de la Bibliophilie. Reliures recherches sur les Bibliothèques des plus célèbres Amateurs armorial des Bibliophiles. Publiée par J. Techener, père, et Léon Techener, fils, avec le Concours d'une Société de Bibliophiles, et accompagnée de Planches, dessinées et gravées à l'eau-forte. Par M. Jules Jacquemart. Huitième Livraison. Paris: Libraire de J. Techener, 52, Rue de l'Arbre-sec, près la Colonnade du Louvre. Dec., 1862.

This is another of the works of the day that might be mistaken as the handicraft of men who closed their eyes a century or two ago. In tint, tone, manner, and subject it is a quaint, scholarly production. The current number contains specimens of book-binding illustrated by the full-sized cover of a clasped volume, printed at Venice in 1535, bearing the monograms of Henri II. and of Diana of Poitiers; the cover of a volume printed at Bâle in 1540; the cover of a third volume, printed at Florence in 1553; a diptych of the eleventh century, representing the Crucifixion, with the thieves and several winged figures arranged upon a back-ground of gems, which formed the cover of an *Evangéliaire*; and the armorial bearings on book-stamps of the most celebrated French bibliophists of the last and preceding centuries.* The subject is not a very popular one; but those whom it does interest will receive with much satisfaction this contribution to it by M. Jacquemart.

Parallèle des Maisons de Paris, Nouvelle Période de 1850 à 1860. Publié sous le direction de M. Victor Calliat, Architecte, Auteur de l'Ouvrage, Hotel de Ville de Paris. Paris: Bance, Éditeur, 13, Rue Bonaparte, en face de l'École des Beaux-Arts. Livraisons 9, 10, 11. 1862.

This collection of views and details of new French houses is to be composed of twenty parts, each of which is to contain six sheets of engravings. Rather more than half the work has been issued. Thoroughly French in conception and execution are the mansions designed by MM. Mortier, Dusillion, Viollet-le-Duc, Lesueur, and Cusin, illustrated in the three numbers last published: thoroughly French from the *rez-de-chaussée* to the *chemin-du-rond*, from the basements to the parapets. A shop, or two shops, are in some instances surmounted by mansions six stories high. A handsome portal, side by side with the shop, admits the denizens of the upper portions of the house to their quarters. A mansion in the Rue Louis-le-Grand, by M. Lesueur, cousists, on the ground-floor, of a large central shop, having on one side of it a smaller shop of the same height, and on the other a ponderous ten-panelled door and doorway, giving admission to the staircase leading to the upper flats. Above the shop floor is an entresol having a projecting cornice above it: upon this rises the chief floor of the house, furnished with balconies; then follows another projecting cornice with a story precisely similar to the last, with the exception of a slight decrease in height upon it; then a parapet stretches the whole width of the edifice, behind which rises another story; then follow another parapet and another story, somewhat recessed; and these are crowned by seven dormers thrown out from the roof. A house in the Rue de Marignan, of similar proportions, designed by M. Dusillion, has a different disposition. The massive portal to the superstructure is placed in the centre of two shops of equal size, the doors of which are in the exact centre of each. Light iron balconies supply the place of the stone parapets in M. Lesueur's design; and the roof is broken into five dormers. In a word, M. V. Calliat is courting for moderately-sized private houses the interest and appreciation M. César Daly has secured for the more important French habitations built in the reign of Napoleon III., entitled "L'Architecture Privée au Dix-neuvième Siècle," of which we have already spoken and shall speak again.

L'Art pour Tous: Encyclopédie de l'Art, Industriel et Décoratif. Émile Reiber, Directeur-fondateur. Troisième Année, Nos. 82, 83, 84. Paris: Bureau Libraire, A. Morel et Cie, 18, Rue Vivienne. 1863.

The loud-sounding title "Art for All," is the name given to an encyclopædia of the industrial and decorative arts, now in its third year of existence. It is printed on one side of a large sheet of paper, which is folded in four. When thus folded every alternate page is a blank. A meagre description is placed either at the sides or at the base of each illustration, printed in bad English, French, and German. The woodcuts are but coarsely executed, although the subjects of them are in most instances well chosen. They are, for the most part, representations of ancient furniture, fittings, and decorations. The editor mentions, in a short account of a figure, in a very

* The Cardinals Richelieu, Bouillon, and Rohan; Marshal de Bassompierre; Duc de Mortemart; Gabriel de Sartines; Amelot de Chaillou, Ministre d'Etat; Franç Voisin, Garde des Sceaux; Merard de Saint-Just; Moreau de Beaumont, Intendant des Finances, 1715 1785; Samuel Bernard, Beringhen; Machault d'Arnouville; Rochechouart; and Jules Hardouin Mansart.

breezy attitude, standing on one leg and leaning on a pedestal, with folded arms and unkempt hair, attributed to Maître Roux, that, to suit all tastes, he has provided for those of his readers who do not admit of fierceness in decorative designing, a milder composition of the same school, the subject of which is Diana and Actæon. This is a group of nude female figures standing knee-deep in a pond, upon which Actæon, with his stag's head, is gazing with outstretched fingers. The dog and a half introduced into the medallion are not the least natural piece of the performance. A fountain, from the works of Charles Eisen, a Flemish painter, is almost too incoherent for comprehension; but still, the fact that an organ for the decorative arts has a circulation is significant.

These are not the only works relating to art and architecture that are now current on the Continent; we have but gleaned here and there. The French have taken up, like ourselves, the question of healthy homes for workmen and agricultural labourers; and this has found expression in the shape of illustrated volumes. The construction of metallic bridges, of theatres, of houses and *châlets* in Germany, has met with exponents. Twenty volumes of archæological annals have been issued; fifteen volumes on decorative ornament; and as many as eighteen volumes of M. César Daly's "*Revue Générale de l'Architecture.*" A work on Egypt and Nubia, by Feynard, is publishing at a price but a few francs short of 50*l.*; a history of painting on glass, for 135 francs; another on historical costumes, for 250 francs. There are monographs upon the Palace of Fontainebleau, the Castle of Heidelberg, the Cathedral of Bayeux, the Sainte Chapelle at Paris, Sainte Marie d'Anch, Notre Dame at Paris, the Sacred Treasures in Cologne, the Cathedral of Cologne; and works upon the châteaux of the valley of the Loire, of France, of Switzerland, the pavilions of the Louvre, choice public edifices, the architecture of the Bois de Boulogne, the palaces of Rome, buildings on railways; on construction in wood, brick, and marble; on perspective, on tiles, on the cemeteries of Paris, to some of which we may hereafter refer. In short, there is on the Continent a widely-spread perception of the beautiful, and appreciation of the works of those who have peopled it in former ages; and there is no doubt but this is to a great extent intensified by the marked and competitive progress the English nation has made in the same paths.

PROJECTED METROPOLITAN RAILWAY LINES.

We must endeavour very briefly to post up a few more of those astounding projects by which the metropolis is to be cut up into small pieces. The Midland company, who have already got leave to form an extension into Camden-town, want a branch thence to the Euston-road. The Blackwall want junctions with the Midland at Kentish-town, and with the Great Northern and the Edgeware, Highgate, and London, at Seven Sisters-road. A new company under the head of Crystal Palace New Railways, wants a number of junctions with the London, Chatham, and Dover, and other works for behoof of such places as Lambeth, Camberwell, Brixton, Battersea, Beckenham, &c.,—seven distinct railways in all. The London, Brighton, and South Coast are in want of new junction lines at Herne-hill and Peckham, Brixton, Tooting, Croydon, Lewes, Ford; more space at Bricklayers' Arms Station; and for "stopping up part of Slough-lane, Camberwell, and Occupation-road in Croydon—arrangements with London, Chatham, and Dover, and Crystal Palace and South London Junction Railway companies—acquisition of the Horsham and Guildford Direct; the Horsham, Dorking, and Leatherhead; the Banstead and Epsom Downs; the Bognor; the Brighton, Uckfield, and Tunbridge Wells, and the East Grinstead, Groombridge, and Tunbridge Wells railways," &c. A Charing-cross northern railway project contemplates "the construction of railways from the Charing-cross Railway near Charing-cross to the Great Northern and Midland Railways near King's-cross and to the London and North-Western Railway near the Euston Station;" and in doing so "to stop up, remove, alter, or divert, temporarily or permanently, all turnpike and other roads and streets, thoroughfares, courts, passages, and highways, railways, tramways, tubes, bridges, rivers(!), and other waters and water-courses of every description, natural or artificial, sewers, pipes, buildings, and works within or near to any of the several parishes, townships, or places aforesaid which it may be necessary or convenient to stop up, remove, alter, or divert for any of the purposes of the intended Act," &c. There is a Paddington and Charing-cross scheme, with three railways, one from Paddington to Lambeth, where it will join the Charing-cross Railway; another from Willesden and the London and North-Western Line at the Kilburn or Kensal Green tunnel, and passing through parts of Chelsea, St. George Hanover-square, St. Mary Abbot Kensington, and Paddington; and the third, both beginning and ending at home in Paddington, after taking a little trip into Chelsea and Kensington. The North and South London Railways Junction Railway comprises seven railways for the accommodation of Fulham, Kensington, Nottinghill, Hammersmith, Paddington, Chelsea, St. Marylebone, Hampstead, and other places. A company proposes to make a railway, to be called the "Thames Viaduct Railway," from Westminster Bridge to London Bridge. The Metropolitan Grand Union Railway Company want to make seventeen railways in and about London, and involving a list of places the mere naming of which would fill at least a column of our space: we therefore leave it to the imagination of our readers, certain that they cannot go far out of the way of this grand union line of lines; which, however, is fairly outdone by the Metropolitan District Railways Company, who desire to be allowed to make thirty-four railways, to form an outer and an inner circle of railway lines round all the metropolis,—an excellent and useful purpose could each form a single line in itself, without perpetual junctions and junctions with this that and the other line, already in existence, and with others not yet in existence. We must halt, and take breath till another week.

HOLBORN VALLEY.

We have received several letters from competitors, complaining, not without reason, that their designs were not publicly exhibited with the selected few; and other letters, from gentlemen advising modifications of the present evil rather than the construction of a perfectly good thoroughfare. With these we do not agree: mere cobbling will be of no avail: the improvement should be made in the best possible manner. Their idea, of course, is mainly the cutting down of the hill on either side, and the partial filling up of the valley. The advantage would not be equal to the cost of a half-and-half measure; and they forget, moreover, the desirability of obtaining the means for free traffic north and south, without jostling with the east and west traffic, and which would be afforded by the viaduct scheme.

Mr. C. J. Richardson, who was a competitor, has memorialized the Court of Common Council, complaining that his design was put aside improperly, and praying that the several plans may "be submitted to the further examination of two eminent civil engineers totally unconnected with the practical carrying out of the work."

SANITARY STATE OF BETHNAL GREEN.

The investigation into the circumstances of the mortality in Hollybush-gardens, from foul air and bad drainage, has been resumed before Mr. John Humphreys, Middlesex coroner. The inquiry was opened upon the body of one of four children that had been attacked with illness at No. 4, Hollybush-gardens. Two of them died, and two are dying.

Dr. Moore deposed that he had attended the deceased, and that she had died apparently from debility, after an attack of scarlet fever. In his medical relief book, in the column of "observations," he reported that the condition of Hollybush-gardens was injurious to health, and that it was badly drained, &c. That was about a month back. He believed that he made a similar report some months back. He was not aware that any steps had been taken in consequence.

Mrs. Caroline Ball, 274, Bethnal-green-road, said that since the jury had viewed her premises on Tuesday last she had lost another child. That was the third child she had lost in three weeks.

Mr. John Gay, senior surgeon of the Great Northern Hospital, said he had made a *post-mortem* examination of the body, and had come to the conclusion that the immediate cause of death was *imperfect aëration of the blood* and its accumulation in the lungs, together with exhaustion from severe illness. The children that died had survived the acute stage of the disorder, and consequently died during the ordinary stage of convalescence. They were originally healthy. All the houses, five in number, had a fairly clear frontage, but were crowded in the rear. They were out of repair and very dirty. The back rooms were the worst, from their proximity to the cesspools, which had either no means of drainage, or such as was most inadequate. The soil in all directions seemed saturated, and the air literally stank. Children attacked by zymotic diseases springing from such a source would have hardly a chance of struggling against their effects in an atmosphere so foul. The requirements in regard to the premises were, doubtless, 1st, privies with traps and abundance of water; 2nd, drainage; 3rd, deodorisation of the soil into which the contents of the cesspools had infiltrated.

Dr. Samuel Pearce, medical officer of health in Bethnal-green, was examined. He deposed that it was the duty of the inspector of nuisances to inspect and detect nuisances. Witness had received no report from the inspector as to Hollybush-gardens. He had seen the observations of Dr. Moore in his report book. Witness detailed the result of an examination he had made of the place.

The jury returned the following verdict:—

"That the deceased died from the mortal effects of the impure state of the atmosphere and the filthy condition of Hollybush-gardens, and the jury say that great blame is due to the parish authorities, inasmuch as they ought to have remedied such a state of things long ago; and the jurors also say that the property ought to be condemned as not fit for human habitation, and that the inhabitants ought to quit until the said Hollybush-gardens be deodorised and rendered fit for human habitation."

The Coroner said that now that the verdict was returned, he wished to state that the parish authorities had complained that he put the county to expense by holding inquests which they said were unnecessary. He was afraid that if the condition of the district were not improved, the number of the inquests would increase; but the authorities in question would be alone to blame. As for himself, he was resolved not to be intimidated in the performance of a public duty by boards of guardians or vestries. He was appointed by the people, and he would do his duty to the people, without flinching under any intimidation whatever.

The remarks of the coroner were received with great applause by a crowded court.

At a recent meeting of the vestry of Bethnal-green, the clerk read a report from Dr. Pearce, the medical officer of health, giving a minute description of the state of Hollybush-gardens, which was said to be totally unfit for human habitation, and the ground perfectly saturated with liquid filth. The houses were dangerous to health and life. Mr. Webb denounced the conduct of Dr. Moore in *not* reporting *before* the frightful state of Hollybush-gardens. Mr. Wright moved that this vestry is of opinion that Dr. Moore has been *calling unnecessary inquests*, and that the vestry-clerk be directed to write to the board of guardians and inquire whether Dr. E. Moore has the right to call inquests in any and every case. The resolution was carried after much discussion.

A lecture was recently given at the Peel Grove Institute, Bethnal-green, by Dr. Moore, the medical officer of health for Bethnal-green, on "Blood Poisoning, and the Unhealthy State of the Dwellings of the Labouring Poor," to a crowded assembly. The chair was taken by the Marquis Townshend, who expressed the great gratification it gave him to preside at so crowded a meeting. He was glad to see so many working men present, as this was a question in which they were specially interested. He further stated that Dr. Moore had not come there to indulge in personalities, or to defend himself from any aspersions, but to look at the sanitary and other defects of the dwellings of the poor in that crowded neighbourhood, and to see what remedial measures could be adopted.

Dr. Moore, who was loudly cheered, then proceeded to comment upon the state of the houses of the poor, and described the different sorts of blood-poisoning. Smallpox, scurvy, cholera, &c., were only different varieties of blood-poisoning. Cleanliness and drainage were the two great essentials in preserving health. The lecturer commented on the water supply, which he said was insufficient, and the cow-houses, which he said ought not to be tolerated in any close or dense neighbourhood. He concluded by remarking that he was not to be intimidated by the obloquy which had been cast upon him: he only asked a fair field and no favour, to answer them, and "God defend the right." He announced that a wealthy distiller had promised him to give 1,000*l.* towards improving the houses of the poor, and added that he would give 100 guineas himself.

An Inspector of the Poor-law Board, Mr. Lambert, has held an inquiry into the charge of alleged inhumanity preferred against Mr. Christey, senior

relieving officer of Bethnal-green, in the case of Caroline James, who expired after being refused admission into the workhouse under circumstances which were strongly condemned by the verdict of a coroner's jury. After the inquiry the Inspector said that he should draw up his report and transmit it to the Poor-law Board.

CONSTRUCTION OF WORKMEN'S HOUSES.

THE ARCHITECTURAL ASSOCIATION.

At the ordinary meeting of the Association held on Friday evening (the 13th inst.), at the House in Conduit-street, Mr. T. Roger Smith, president, in the chair,

Mr. H. A. Darbishire read a paper on "Dwellings for the Poor," which appeared in our journal last week. At the conclusion,

Mr. Webber called attention to the description of brick ventilator mentioned by Mr. Darbishire, and observed that he himself generally placed them over the chimney-breast, using one for the admission of fresh air and another for the escape of foul. He found by experience that the insertion of perforated zinc had a similar effect in breaking the current of air to the brick.

In reply to a question,

Mr. Darbishire said that iron girders, on Fox & Barrett's principle, for floors, discoloured the ceilings so much, that the people who used model lodging-houses, objected to them under an impression that the rooms were damp.

Mr. Blashill, in calling attention to the dwellings for the poor, recently erected in Bethnal-green, observed that in his opinion it would be far better to build them in blocks consisting of several stories than in single tenements. With regard to the cost, he considered it most essential that the buildings should be erected so as to pay such a rate of interest as would induce capitalists to invest money in this description of property. Of course, in the case of the Peabody gift, benevolence was the inspiring motive; but for his own part he saw no reason why a fair return might not be had on such buildings as simple commercial speculations. He agreed with the paper in the propriety of discarding plaster walls, as the great considerations to keep in view in such dwellings were cleanliness and comfort. The wives of working men were, as a rule, anxious to keep their homes clean and tidy; and it was a great mistake to suppose that they did not prize a clean and comfortable home. If the commercial element could be infused into the building of these dwellings to a greater extent than at present, a far larger amount of good could be effected.

Mr. R. O. Harris brought under notice the circular issued by the Society of Arts, offering special prizes for the most approved designs for labourers' cottages. The required cottages were in fact five-roomed houses to be built for 100*l.*, exclusive of the cost of the ground. In his opinion it would be impossible to build them for the money.

Mr. Darbishire agreed in this. A cousin of his own, who lived in the country and was fond of building, had erected a number of cottages on his estate; and he had assured him that he had not been able to build a single cottage under 180*l.*, or a pair under 250*l.*, although he had the bricks on his estate and employed his own carpenter. In answer to further questions, he said that, in his opinion, no house ought to be built without 14-inch walls. The Building Act certainly allowed 9-inch walls, but in certain exposed situations he had known rain to be driven right through them. There were some 9-inch walled cottages on Miss Burdett Coutts's property in Bethnal-green, and she had expended a great deal of money in making them habitable. With regard to the returns upon the investment, Miss Coutts's buildings in Columbia-square paid about 2½ per cent. The laundries and baths and drying-grounds were in the attics, and were given to the tenants without extra charge. No plaster was used except in the ceilings, and the partition-walls were of brick, 4½ inches thick. The rents were 3*s.* 6*d.* per week for two rooms, and 4*s.* for three rooms; but he thought 4*s.* 3*d.* might be obtained for the two rooms, and 4*s.* 9*d.* for the three. If, however, these rents were charged, working men with about 12*s.* a week would underlet them,—a practice which it was not desirable to encourage. He had inspected the buildings erected by Mr. Alderman Waterlow, and had visited one of the inmates, whose room he found extremely neat and comfortable. On asking her what rent she paid, she replied 6*s.* 6*d.* per week. To this he replied,—"Then your husband must be a man earning about 130*l.* a year?" "Oh, no," she rejoined, "I have no husband, but I have two sons, and I could not pay so much rent but that I take in a lodger." He, however, saw no accommodation for a lodger, as there were but two rooms; but, on further inquiry, it appeared that the sons occupied one of the rooms, and that the lodger was a young woman who slept with the tenant. A merchant in the City (Mr. Gibbs) had asked him to design a building which would pay 5 per cent. This building (erected in Westminster) was now approaching completion. The lavatories, &c., were within the building, but the steam from them was found to be so objectionable that they were removed, and a separate building erected in the yard. This building would, he believed, pay nearly 5 per cent.; but the manner in which all such dwelling-places were rated was extremely unjust. The rating was in fact exorbitant, and the principle most inequitable. He had seen Mr. Villiers, the President of the Poor-Law Board, and other influential persons, on the subject, and he hoped that a measure would be introduced into Parliament to remedy the grievance of which he complained; for until the present law was altered it would be impossible to expect that any great impetus could be given to the movement for improving the dwellings of the poor. If the rates were reduced, he saw no reason why such buildings should not return a fair interest on the capital invested. The Peabody trustees had only erected one block of buildings, but he believed that sites had been obtained for others. In reply to inquiry, he said his experience of zinc was not satisfactory. Cats had a great affection for roofs, but the presence of the feline element was fatal to the metal.

Mr. Collins said he had frequently used zinc with the best possible results, and that he had used it in roofs populous with cats, without any detriment to the metal.

Mr. New asked what description of cistern had been used by Mr. Darbishire at Bethnal-green.

Mr. Darbishire replied that he had used lead cisterns with the usual casing of wood. These he found in practice to be better than slate, which, unless very well bound together, were liable to leak. The service-pipes were, however, of iron.

Mr. New and Mr. Collins spoke of the utility and cleanliness of slate and iron cisterns.

Mr. C. J. Adams called attention to the dwellings of the poor in portions of Chelsea, which he described as being of the most squalid and objectionable description. He expressed a hope that the trustees of Mr. Peabody would not overlook this district.

Mr. Darbishire said he believed the trustees were now in treaty for the purchase of some of the property to which Mr. Adams referred. In reply to further questions, he said that the original objection of the poor to occupy model dwellings, arising from an apprehension that their freedom of action might be interfered with, was rapidly disappearing, and that nothing could exceed the anxiety of poor persons to obtain accommodation in the new buildings. At Miss Coutts's houses, for instance, there were at this moment fifty applications for the first set of rooms that might become vacant; and he believed that when the houses erected by Mr. Gibbs in Westminster were completed, they would be at once filled. The people now found that they were perfectly free in their dwellings, and that, so long as they paid their rents and were quiet tenants, no one was disposed to interfere with them.

The Chairman said that it would be impossible that evening to protract the discussion upon Mr. Darbishire's admirable paper; and that, under these circumstances, it might be well to adjourn the discussion until the next night of meeting, the 27th instant. This was accordingly done, and a vote of thanks was unanimously accorded to the reader of the paper.

GAS.

THE directors of the Hythe and Sandgate Gas Company intend reducing the price of gas from 8*s.* to 7*s.* per 1,000 cubic feet.——The people of Sandwich, at a public meeting, have unanimously resolved, "That the gas now consumed [at Sandwich] is injurious to health, and destructive to the goods of many of the consumers." It was also unanimously resolved, "That the price of gas is considerably above the price charged in the neighbouring towns, and the consumers are dissatisfied therewith." A committee was appointed to confer with the gas company on the subject.——The Cheltenham gas company have decided upon reducing the price of gas to private consumers from 4*s.* 9*d.* to 4*s.* 6*d.* per thousand feet from the 1st of January.——The directors of the Birmingham and Staffordshire Gaslight Company announce that they have decided on making a further reduction in the price of gas: to all parties whose consumption is under 25,000 cubic feet per quarter, the price will be 3*s.* 4*d.* per 1,000; 25,000 and under 100,000 cubic feet, 3*s.* per 1,000; 100,000 cubic feet and upwards, 2*s.* 8*d.* per 1,000. This scale will be subject to a discount of 5 per cent. for cash.——New gas works have been erected at Kineton. The contractors were Messrs. Porter & Co., Lincoln. The gross estimated outlay on the works is about 1,200*l.* The plans were prepared by Mr. Lait, architect to Lady Willoughby de Broke, the design corresponding with that of the new library and school-house. The material is blue brick, with white facings, pointed with black mortar. The gasometer is capable of containing 4,000 cubic feet of gas. The price of the gas will be about 8*s.* or 8*s.* 4*d.* per 1,000 feet.

METROPOLITAN BOARD OF WORKS.

At the usual meeting of this Board, last week, it was resolved that the Board should have a sitting in order to agree to an arbitration clause, to be inserted in the contract for the second portion of the Thames Embankment, making all matters of dispute a subject of reference to an independent authority. This has since been negatived. After some discussion it was resolved, in the face of two amendments, "That Mr. F. W. Goddard, at present temporarily employed in the superintending architect's department, at the weekly wages of three guineas, be appointed, during the pleasure of the Board, at an annual salary of 300*l.*" A short conversation afterwards arose in regard to certain charges against the engineer of the Board, by Mr. Newton saying that, now the matter had been mooted in the papers, it would be well for the Main Drainage Committee to sit as soon as possible.

The Committee has since been occupied with the consideration of these charges, which involve the alleged existence of a connexion between Mr. Bazalgette and Mr. Furness, the contractor for part of the Embankment. We must not omit here to add, however, that a communication from Mr. Bazalgette respecting these charges was laid before the Committee at one of the meetings referred to.

In respect to the charges alluded to, we should have much preferred a continued silence till the engineer had had an opportunity of defending himself before the public; but it would be affectation in us to pretend to withhold information which the public already possesses. The gravamen of the charges may be quoted in the words of Mr. Filmer at the Marylebone Vestry the other day. Mr. Filmer said that, according to a letter in the *Clerkenwell News*, signed "A Ratepayer," it appeared that a large contract, amounting to 520,000*l.*, had been given to one contractor, named Mr. Furness, while another, Mr. Ridley, had tendered to do the same work for 25,000*l.* less; namely, at 495,000*l.* An extraordinary statement made was, that there were two other contractors between Mr. Ridley and Mr. Furness, namely, the Messrs. Baker, who tendered to do the work for 600*l.* more than Mr. Ridley, and 24,400*l.* less than Mr. Furness; and Messrs. Moxon, who offered to do the work for 510,076*l.*,—nearly 10,000*l.* less than Mr. Furness. There was another contract mentioned in the same paper for the Northern Outfall Works; and it was stated that a highly respectable firm had tendered to do the work of that contract for 133,000*l.*, but that tender was thrown aside for one made by Mr. Furness, at a no less sum than 164,000*l.*,—31,000*l.* higher; so that the lucky contractor for the Thames Embankment tendered for a much higher sum in both these instances, and in both got the contract.

Mr. Freth, at the same meeting, said that the subject was a very proper one for the vestry's consideration, and moved "That the representatives of this Vestry on the Metropolitan Board of Works be requested to watch the proceedings of that Board with regard to the recent contracts for the Thames Embankment, and to communicate to this Vestry from time to time."

The motion was unanimously agreed to.

The Committee of which we have spoken consisted of the whole Board of Works. After sitting on three successive days, they decided, by a majority of eleven to nine, that, although the terms of the chief engineer's agreement with the Board were that his whole time and attention should be devoted to their service, he had, in the committee's opinion, unadvisedly entered into certain arrangements with one of the contractors, whereby he was to receive certain large sums of money in the shape of com-

NEW CONGREGATIONAL CHAPEL, LYTHAM.

MR. W. F. POULTON, ARCHITECT.

Interior.

CONGREGATIONAL CHAPEL, LYTHAM, LANCASHIRE.

This building was completed in 1862. It is constructed of Longridge stone in courses, but with rough face. All the dressings are also of Longridge stone, worked fair. The tower and spire at the angle are 87 feet high. The staircase to the small gallery at the end of the chapel is contained in the tower. An entrance is also obtained in the tower to the chapel, but the principal entrance is in a porch at the side. At the back of the chapel, in the rear of the apse, is the vestry for the use of the minister; also the heating-chamber, &c.; and above these is a room sufficiently spacious for a school-room for the present.

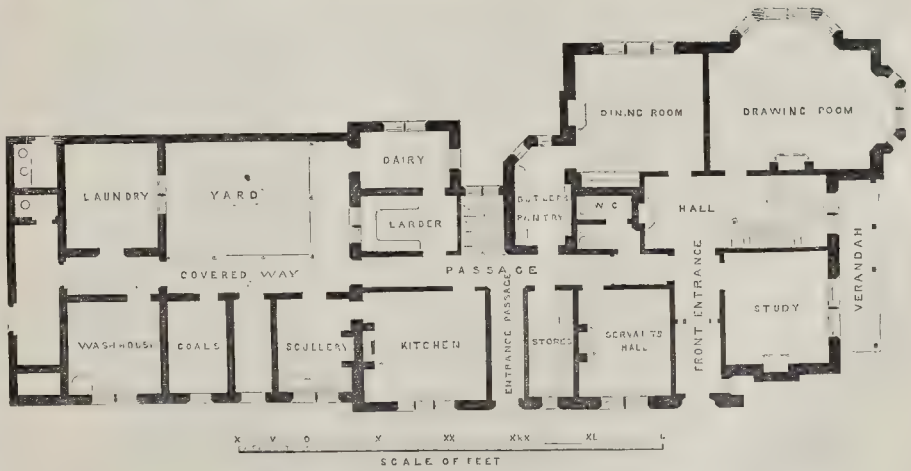
The interior has a plastered ceiling with arched timber ribs and purlins. The whole of the internal fittings are of deal, stained and varnished.

The accommodation is for about 500 persons. The cost of the chapel, including the iron fencing and gates, was 2,093*l.* 10*s.* Heating, lighting, ventilation, and laying out the ground, have together cost 189*l.* 10*s.*

Mr. W. F. Poulton, of Reading, was the architect; and Messrs. Cooper & Tullis, of Preston, were the contractors.

INDIAN SCULPTURE AT WINDSOR CASTLE.

A number of large wooden cases, containing a quantity of Indian sculpture, as presents to her Majesty, have arrived at Windsor Castle. The sculpture and carvings, which are of white statuary marble, slightly tinted here and there with brownish veins, comprise a small temple of Oriental construction, with delicately-perforated panels, pilasters, and cornices, ornamented with leaves and cupola dome, all finely chiselled by Eastern artists; and two elephants, furnished with housings, bells round their necks, tassels depending from their ears, and mounted on low, flat pedestals, carved in the same material as the temple. The elephants are each about 4 feet high and 4 feet in length.



PARSONAGE HOUSE, AT CHADLINGTON, OXFORDSHIRE.

This house, which has just been completed, has been built by the late Mr. J. H. Langston, M.P. for the city of Oxford, of Sarsden House, near Chipping Norton. The village is a hamlet of Charlbury, of which Mr. Langston was the principal landowner; and the house has been built by him, to provide for a resident clergyman in the village, it having been his wish to carry out an arrangement with the patrons of the living of Charlbury, by which he would have made a gift of the house and certain lands, in consideration of the patrons giving up a portion of the living, which is worth as much as 800*l.* per annum. This arrangement, however, for the present at all events, is interrupted by Mr. Langston's death, which has taken place since this view has been in preparation. The varied outline of the building renders it somewhat ornamental and picturesque, although plainness of detail has been observed throughout. The roof is covered with an extremely durable local stone slate, and most of the materials used, including the walling and freestone, the bricks, and oak timber, have been obtained from the estate. Nearly the whole of the work has been executed in a most creditable manner by his own workmen, acting under the direction of Mr. H. Andrews, his agent. Every care has been taken to render the building satisfactory in all respects; and the architect has been fortunate in having his details carefully observed. The cost has not yet been ascertained. Mr. Wilkinson, of Oxford, is the architect.

The church and schools at Milton, the church at Churchill, and the schools at Lyneham, besides many other buildings of a useful character in the neighbourhood, are also works due to the liberality of the late Mr. Langston.

mission, which the committee condemn; but, from the evidence, distinctly showing it was his wish that the contract should be given to Messrs. Baker, felt that no collusion existed between Mr. Bazalgette and Mr. Furness with respect to that contract. They recommended the Board to call the engineer's attention to the terms of his agreement, and that in future the whole of his time and energies be devoted to the Board, and that he at once unhesitatingly give up all claims under the agreement, which it was felt he had improperly entered into. Mr. Bazalgette voluntarily handed in a guarantee in writing to carry out the suggestions made in the last paragraph.

PARSONAGE HOUSE, AT CHADLINGTON, OXFORDSHIRE. —Mr. Wilkinson, Architect.

WOOD CARVING COMPETITION: ARCHITECTURAL MUSEUM.

THE Council of the Architectural Museum, it will be remembered, offered two prizes, 20*l.* and 5*l.*, for the first and second best carved "Miserere," introducing two figures, or one figure and an animal, illustrative of a trade or occupation. In response nine have been sent in, and are now open to public inspection on screens in the Educational Department on the ground-floor of the South Kensington Museum. The carvings would be better seen if placed in a case below the eye. The strong shadow now on them prevents inspection. The carvings, each under a motto, are as follows:—"A red seal:" a carpenter at work on a Gothic rib, exhibits considerable vigour. "Where the Shoe pinches:" a shoemaker, on Mediæval stall, trying shoe on a little boy. Some humour in it: the *pose* of the shoemaker clever. "Progress:" a farrier shoeing a horse. A. J. A., an artist, the figure very indifferent: vine leaves and fuchsia blossoms, the latter well cut, but being easily broken off, not suitable for purpose. "Penny a Bunch:" flower-girls. "And they shall turn their swords," &c.: two smiths, with considerable amount of leafage; the figures very weak. "Star in a circle:" sheep-shearing, a single male figure, and sheep partly sheared, the knee of the man placed somewhat dangerously on the throat of the animal: simple and expressive, almost Flaxmanish in design: this is an able work, and deserves notice. "*Tandem sit circulus arbor:*" gardening; a good hearty paterfamilias, with coat off, watering his garden; two small flower-pots hung up in boughs at the sides to frame the group: a clever piece of carving, but unsuitable in charactar. "Gleaning," motto unnoticed: a girl and child, the girl carrying the corn on her head. A good composition, possessing much grace and beauty, and, as a whole, better entitled to the first prize than any one of the others.

ON CHURCH ARCHITECTURE.

MY attention has only just been directed to a letter on "Church Architecture," which appeared in the *Builder* of October 31st, signed "John Elliott." The object of the writer seems to be, to show (1), that the practices of regarding as more sacred than the rest that part of the church in which the Lord's table stands; of separating it from the part occupied by the congregation by a rood screen or other partition; of appropriating it to the use of the clergy and choir alone; of calling the Communion-table an "altar;" of using a credence-table, &c., have no warrantry in the custom of the early Christian Church. (2.) That they are practices of purely Mediæval origin, springing wholly out of the "blasphemous and idolatrous" doctrine of transubstantiation. (3.) That there is no better authority for the orientation of churches; many of the old basilicas and ancient churches at Rome lying north and south. This, as far as I understand, is the sum and substance of Mr. Elliott's dogmatic letter. He says it is not the first time he has addressed you on the subject, and challenges any of your readers to controvert his statements. As you have, on a previous occasion, been good enough to insert a letter of mine also on "Church Architecture," perhaps you will kindly allow me space for a few remarks in answer to this challenge.

Mr. E. reminds us, that in the Roman basilicas used as churches by the early Christians, and in the churches built by them on the basilican model, the nave was terminated by a *bema* or apse, having seats arranged round it for the clergy, with a higher one for the *president* (as the officiating priest, or bishop, if present, was called); that the said *bema* was separated from the nave by *cancelli* or lattices; and that the Lord's table stood without the cancelli, "in the midst of the people." Here Mr. E. is perfectly correct in all his facts, except the last, which is the only one to the point, and in which he is utterly wrong. The altar always stood, not in the midst of the nave, but in the midst of the *bema*, within, and not without, the cancelli. I am much mistaken if Mr. E. can bring forward a single instance to the contrary from the writings of any author of the first six centuries, or from authentic remains of any church of greater antiquity than the commencement of the Mediæval era. If so, it must be some isolated and purely exceptional case. The earliest detailed description we have of a Christian temple is given by Eusebius in Book X., chap. 4, of his "Ecclesiastical History," written A.D. 325; in which he gives an account of the new church at Tyre, consecrated A.D. 306. After speaking of the atrium, with its cloisters, the baptistery, porticoes, vestibule, and nave, he comes to the bema. This, he says, "he" (the founder) "adorned with lofty thrones in honour of those who preside; and also seats, decently arranged throughout" (*i.e.* all round) "the whole, and at last placed *the holy altar* in the middle. And *that this again might be inaccessible to the multitude, he enclosed it with frame lattice-work, accurately wrought with ingenious sculpture*, presenting an admirable sight to the beholders." Here we have express mention of the seats for the clergy, "decently arranged" round the whole apse, the more "lofty thrones" for the presiding bishop or bishops, and the "holy altar" standing "in the middle" of the apse, shut out, and made "inaccessible" from the nave, by the "cancelli," or "frame lattice-work," the "*iconostasis*" of the Greek Church. If we examine, moreover, the remains of the Greek and Byzantine churches from the earliest date downwards, we find them built on one unvarying plan,—a *sanctuary* or chancel, separated from the nave by just such a screen as Eusebius speaks of, called the *iconostasis*, from the figures or images carved on it, and having a smaller chancel to the north, called the *prothesis*, where all things were placed ready for the celebration of the Eucharist, to be carried by the priest with great pomp into the *sanctuary*, at that part of the service known as the "Great Entrance." This arrangement of the service, and, therefore, probably of the building, has undoubtedly been adhered to in the Eastern church since the second or third century of our era. There was usually a third or southern chancel, but all three were divided from the nave by the *iconostasis*.

That the Lord's table was commonly spoken of as *the altar* even in Eusebius's day, appears from the passage I have already quoted. Still earlier writers speak of the Holy Eucharist as the "commemorative" or "unbloody sacrifice." Athenagoras, if I mistake not (A.D. 177), is the first who uses the last expression, repeated again and again by nearly all the old divines of our Reformed English Church.

Mr. E. thinks the use of chancels, rood-screens, credence-tables, &c., springs solely from the "blasphemous and idolatrous" doctrine of transubstantiation. Undoubtedly, it springs from the doctrine of the Real Presence. But this is of no mere Mediæval origin. As held by the Anglo-Catholics of the present day, it has been held by every branch of the one holy Catholic Apostolic Church, whether Greek, Roman, or Anglican; and is as plainly set forth as the doctrine of the Resurrection, or any other Christian doctrine, in all the old Greek liturgies, some of which (as even Calvinists and Presbyterians confess) cannot be of later date than the second or third century; and were, in all probability, compiled (as Dr. Neale has conclusively shown, in his Lectures on Liturgiology and elsewhere) as early as the days of the apostles themselves. The doctrine of *transubstantiation*, like the Lutheran theory of *consubstantiation*, or the Greek dogma of *transelementation*, was a mere profane and carnal attempt to define the *manner* of that Mystery which, as freed from all such modern fables, gives all its life and meaning to the whole system of eucharistic worship, and to that archetypal arrangement of the Christian temple which, by common consent, the Church has adopted from the earliest times.

Mr. Elliott offers an insult to the common sense of your readers when he intimates that, in the rubric at the commencement of the prayer-book, the order that all "*chancels shall remain as they have done in times past*," means "as they were in the days of the primitive church," and not, as any sensible and unbiassed person would read it, "as they have been hitherto." The rest of the rubric shows plainly enough that this last is the true meaning; and, moreover, there is no reason to suppose that the compilers were less ignorant of the arrangement of the primitive churches than Mr. Elliott appears to be.

The custom of the orientation of churches simply arose from the intention that the celebrant and the congregation should look to the sun-rising in token of the hope of the church militant, the looking for the rising again upon the earth of the Sun of Righteousness at the dawning of the Resurrection. The practice being comparatively an unimportant one, was of course waived whenever Christians found a basilica convenient facing north and south, or a site which, though otherwise desirable, compelled such an arrangement.

I ought, perhaps, to apologise for touching on doctrinal matters; but, in attempting to vindicate church architecture as a true though symbolical exponent of Christian doctrine, it is impossible to avoid doing so. I trust I have said enough to prove that our best modern architects are right, as far as ancient example and Christian symbolism are concerned, in adhering to that model which Mr. Elliott would fain prove they ought to abandon.

WILLIAM PURTON.*

MODERN CHURCH SYMBOLISM.

SIR,—In the debate at the Manchester Church Conference following the reading of Mr. Hope's paper on the right ecclesiastical model, the Rev. Alexander Watson proceeded to argue that the church should tell out by its very shape the whole mystery of redemption, with its threefold nave and aisles shadowing forth the doctrine of the Trinity, and with its chancel standing as the sacred *Solium Christi*.

The motives which induced the Great Architect of the Universe to veil His purpose in type and symbol, and to make the temple one of the chief mediums of illustration, can easily be found by those who will take the light of Revelation to guide them in their search.

The fact that the temple, in its arrangements, not its style—for no reference is ever made to that—was in all its details the embodiment of the shadows which were to be succeeded by the substance,—the stony framework holding the darkened glass through which the chosen few were permitted to look and watch for the coming sun,—is an admitted truth.

So thoroughly was this understood and felt by the Israelites;—so deep was their knowledge of the meaning of every part of the sacred structure, that when God was moved to reprove them publicly, His command to Ezekiel was, "Show them the House;" and the prophet proceeds at once to enumerate the arrangements of the temple, with all its well-known details and accessories; trusting, by the bare recital of these things, to recall the lessons they were designed to teach.

Here there was symbolism of the highest order,—divine in its origin, grand in its simplicity, marvellous in its consistency.

When men were permitted to see "face to face" the spiritual realities that succeeded their material shadows; when "the veil was rent in twain," and the decree gone forth that not one stone should remain upon another of that gorgeous structure, whose work was done, its mission ended; the command was issued that these things of the past, glorious as they were in earthly beauty, should be henceforth considered as "filthy rags," the cast-off garments to be spurned by those clothed in the "robe of salvation."

To fulfil a type is to abrogate it, and to continue the symbol is to disbelieve in the fulfilment of its ideal.

The Apostles never quoted the symbols and types of the old dispensation, save to explain them as fulfilled in the spiritual things of the new: they brought forward the darkness to illustrate the light; and adduced the bondage and degradation, even of the "chosen people," under "priests," as the most powerful of all contrasts with the state of those whom the "truth" had made "free;" their bodies, therefore, living temples, with the "Holy of Holies" in their hearts; and every man his own "king and priest," to offer up "spiritual sacrifices acceptable to God." The command, never again to be "entangled in the yoke of bondage," meant, when it was issued,—no more temples and priests; no more material sacrifices and altars.

How the primitive Christians for centuries practically obeyed this injunction is shown in my former letter; wherein it was also demonstrated that the Mediæval model of churches, with its long screened chancel, was in direct opposition to the principle of arrangements in all churches up to the tenth century; and an attempt, in fact, to substitute a "temple" for a church.

No scholar would entertain the notion that any people, surrounded as the Christians were for so many centuries with reminiscences, if not actual examples, of Pagan and Jewish worship, could think of a "priest" in a material or sacerdotal sense, without simultaneously connecting him with a material sacrifice: if the one was right, so was the other necessary, and a temple and an altar the necessary complement of both.

The pretension to stand between the people and their God involved sooner or later the whole sacerdotal system, with all its inevitable accompaniments. The first minister whose ambition led him thus to view his official position commenced the

* A dozen other letters have been received on this subject, but are inadmissible, as tending to drag us into theological discussion, or as asking questions for replies to which we could not give space.—ED.

s of those priestly aspirations which Rome nally condensed into a system, put into a form at the Lateran Council, and affixed her to at the Council of Trent.

he bud of modern systems and types was ted on the stem, and blossomed side by side that full-blown Papal "flower" which Father man boasts is the true development of the "Christian bud."

me allowance must be made to the "priest y" for the extremely clumsy way in which have employed symbolism, on account of the ral difficulties of the situation.

here was but one Jewish temple, and its sym-, therefore, ran no danger of being applied to other building not so correctly arranged.

he Christian churches being intended for l worship, and extending their areas in pro-ion to their congregations, left no chance of g on them any permanently correct symbol.

n all ages and countries, and in all styles of itecture, whether in religious or civil struc-s, it was customary, simply from constructive ons, to divide the space to be roofed in into e or more divisions. Some of the basilicas five, and two of our cathedrals are thus nged; while numbers of Gothic churches have ve and one aisle only. To fix on a church h nave and two aisles, as symbolising the nest mystery of our faith, is to cast a slur on the others, whether in excess or subtraction n the mystic number. It is only in the ieval chancel or "transubstantiator" (the *lesiologist* gives me credit for the significance the name) that Mr. Watson and his friends ld confer the dignity of being "solium isti:" they would be horrified at applying h a symbol to the little chancel platforms, the y ones known in the first ten centuries of istianity. The confusion arising from the ble set of words in Christian nomenclature is readful difficulty in the way of modern sym-ism. "Priests" came into the Christian tem as invaders, and stayed long enough as querors to leave their language as a legacy to descendants of their victims.

The lordly castles which once frowned on our d, though reared with Saxon means and by xon hands, bore witness, in the Norman names every detail, for whose use and for what pur-e these structures were erected. Before the nquest, villein meant a respectable villager: the haughty conqueror, it became the synonym scoundrel; while all the virtues were embodied a Norman on horseback, a "chivalrous man." hile the poor Saxons fed and tended their mestic animals, the domestic names for them re retained: but, dead, they were for the con-erors' table, and swine became *porc*; ox, *bœuf*; eep, *mouton*.

It thus happens that Englishmen are doomed all time to be reminded, whenever they call for eir mutton, that their ancestors were once serfs. The significant terms of freedom and serfdom e, in like manner, perpetually jostling and ossing each other in the Christian world.

It was very wrong and foolish to introduce, to people previously wholly unaccustomed to them, ch words as "table" instead of "altar," "con-entus" or "meeting-hall" in lieu of "temple," d "minister" in place of "priest:" or, the ilt and the folly must rest with those who, nturies after the original language had become ttled, reintroduced the old language of bondage, d thus left us two sets of words with such tally opposite meanings. The Italian priests ho came over to this country introduced two ords of their own coining in connexion with eir system, viz., credence-table, from *credenza*, butler's buffet; and *piscina*, or *water*-hole, to ceive the spare wine in its *blood* state.

A little consideration of these premises will con-nce the most incredulous that every thing like nsistent symbolism, applicable even to any one ériod of the church, was quite out of the ques-on. It was totally impossible that any one ideal ould be made to adjust itself to a church with ne, two, three, or four divisions; to a chancel tatform and a "holy of holies;" with a table, or mb, or altar, having a butler's buffet and water-old as accompaniments. When the font was rst placed at the entrance of a church and the ord's table stood in its centre, the arrangement as suggestive of the fact that those washed from eir sins, and then sitting as honoured guests at eir Lord's table, were sons with him by adop-on, and brothers of the son of God. The simile clearly reversed when the font only retains its d position, and the table, become a tomb or altar," is hidden from the people behind a reen or veil. Under such a state of things, Durandus, a Mediæval bishop, tells us that the chancel, that is the "transubstantiator," represents "the priests or the church triumphant, while the pavement symbolises the people, made to be trodden under foot." The Rev. Braud Morris, a curate of Dr. Pusey's, playfully reproduces the same idea with a very ingenious variation:—

> "The ox was present at his master's crib
> To show that priests should at his altar live:
> The ass was also there,—
> Fit emblem of the patient laity,
> Who humbly bear the burthens on them laid."

As a pope once summed up the aspirations of all his "caste" by stating that "the proper position for priests was with their feet on the necks of kings," it is but natural that all symbols drawn by "priests" have the tendency to exalt them and degrade the people.

A lion and a man, once upon a time, walked through the world together; and the biped so frequently drew the attention of his four-footed companion to the fact that all sculptured history represented the man as conqueror, that at last the humble lion, an American beast, was tempted in answer to say, "That's all very well, Mr. Human, but if we lions had done the chiselling you'd have read a different story."

All history proves that the symbolism which is natural and true is the unaffected result of preconceived ideas, seeking expression in some outward and visible sign.

False symbolism, on the other hand, is that which is fastened on to existing objects, and both strained and distorted to fit each other.

The one is employed for honest purposes, the other never.

JOHN ELLIOTT.

A LITERARY SQUABBLE.

"IN RE" LORD HOUGHTON.*

THE Alphabet rejoiced to hear
That Monckton Milnes was made a Peer;
For in this present world of letters
But few, if any, are his betters.
So an address by acclamation
They voted of congratulation,
And H O U G T and N
Were chosen the address to pen,
Possessing each an interest vital
In the new Peer's baronial title.
'Twas done in language terse and telling,
Perfect in grammar and in spelling:
But when 'twas read aloud—O mercy!—
There sprang up such a controversy
About the true pronunciation
Of said baronial appellation.
The vowels O and U averred
They were entitled to be heard.
The consonants denied the claim,
Insisting that they mute became.
Johnson and Walker were applied to,
Sheridan, Bailey, Webster tried too;
But all in vain, for each picked out
A word that left the case in doubt.
O, looking round upon them all,
Cried, "If it be correct to call
T H R O U G H 'thr*oo*,'
H O U G H must be *Hoo*;
Therefore there can be no dispute on
The question. We should say 'Lord *Hooton*.'"
U "brought" "bought," "sought," and "fought"
to show
He should be doubled, and not O;
For, sure if "ought" was *awt*, then "nought" on
Earth could the title be but *Hawton*.
H, on the other hand, said he
In "cough" and "trough" stood next to G,
And like an F was then looked oft on,
Which made him think it should be *Hof*ton.
But G corrected H, and drew
Attention other cases to:
"Tough," "rough," and "chough," more than
"enough"
To prove O U G H spelt *uff*.
And growled out, in a sort of gruff tone,
They must pronounce the title *Huff*con.
N said emphatically "No!
There is D O U G H, *Doh!*
And *though* (look there, again!) that stuff
At sea for fun they nick-named 'duff,'
He should propose they took a vote on
The question, should it not be *Hoton*?
Besides, in French 'twould have such force,
A lord was of *haut ton*, of course."
Higher and higher contention rose,
From words they almost came to blows:
Till T, as yet who hadn't spoke,
And dearly loved a little joke,
Put in his word, and said—"Look there!
'*Plough*' in this *row* must have its *share*."
At this atrocious pun each page
Of Johnson whiter turned with rage;
Bailey looked desperately cut up,
And Sheridan completely shut up;
Webster, who is no idle talker,
Made a sign indicating "Walker!"
While Walker, who had been used badly,
Just shook his dirty dog's ears sadly.
But as we find in prose or rhyme,
A joke made happily in time,
However poor, will often tend
The hottest argument to end,
And smother anger in a laugh:
So T succeeded with his chaff
(Containing as it did some wheat)
In calming this fierce verbal heat.
Authorities were all conflicting,
And T there was no contradicting.
P L O U G H was *Plow*,
Even "enough" was called "enow;"
And no one who preferred "enough"
Would dream of saying "Speed the pluff!"
So they considered it more wise
With T to make a compromise;
And leave no loop to hang a doubt on,
By giving three cheers for Lord { Hough / *How* } ton!

J. R. PLANCHÉ.

* At the recent Leeds Congress of the British Archæological Association, Lord Houghton presided; and these lines originated in the various pronunciations of the new title by strangers. They were written for private circulation only: we print them as a suggestive and telling commentary on some of the difficulties in the pronunciation of the English language.—ED.

RAILWAY MATTERS.

THE work of demolishing houses on each side of the way on Ludgate-hill has commenced, preparatory to the construction of the offensive railway-bridge which is to connect the London, Chatham, and Dover line with this Metropolitan Railway; and Londoners are looking forward with curiosity and apprehension to the unsightly erection which is likely to prove so great an architectural eyesore.——Some months ago the London and North-Western and the Lancashire and Yorkshire Railways came to an arrangement, by which the latter took the eastern and the former the western end of the Victoria station at Manchester. From that time the London and North-Western Company, finding their portion of the station inadequate for their traffic, have been carrying on very extensive alterations. They have added a new wing to their portion of the station. The Ducie-street bridge has been widened about 20 yards on the Hunt's Bank side. This widening of the bridge has enabled an extension of the central platform to be carried out for about 130 yards in length, and 7 yards in width, and the platform on the side of the station to be continued 6 yards in width to the Salford end of the bridge. The whole of this extension is being covered by a glass roof; and, to give a sufficient altitude for the roof over the bridge, a framework of glass will be raised about 14 feet above the parapet. Other additions are contemplated. The ironwork for the widening of the bridge has been constructed by Messrs. Fairbairn, of Manchester; the extended platforms and glass roofing have been carried out by Messrs. Neill, Strangeways; and the iron framework for the glass roof by Mr. Mayburn, of Ardwick. —— The Great Eastern Railway Company have opened to the public their new station at Cambridge, just completed at a cost of several thousand pounds. The whole of the arriving and departing trains are now reached from one platform, 400 feet in length. There is an entire suite of new offices. Hot-water apparatus is in course of construction to supply foot-warmers to the first-class passengers during winter.——The traffic receipts of railways in the United Kingdom amounted, for the week ending the 14th of November, on 11,028 miles, to 564,040*l.*, and for the corresponding

week of last year, on 10,578 miles, to 525,360*l.* showing an increase of 450 miles, and of 38,680*l.* in the receipts. The total receipts of the week show a decrease of 8,060*l.* as compared with those of the preceding week, ending the 7th inst.

THE HOTEL MOVEMENT.

An Ilfracome Hotel Company (limited), has been incorporated, with a capital of 20,000*l.*, in 2,000 shares of 10*l.* each, for the purpose of erecting a large hotel at Ilfracombe. Mr. M. C. W. Horne, of London and Plymouth, is the architect employed. Ilfracombe, in Devon, is a fashionable watering-place on the south shore of the Bristol Channel, and rapidly rising in popularity. "Many of the most eminent writers of the day (*vide* Kingsley, Trollope, Lewes, and Goss, also *Punch* of October 3rd, 1863), concur," says the prospectus, "in representing it to be 'the loveliest of all English watering-places;'" and it is certainly celebrated for its scenery and its healthfulness. The building is to contain all the usual hotel conveniences for visitors. The site fixed upon is centrally situate, close to the chief promenade of the inhabitants and visitors and to the baths and beaches. The railway is now within a few miles of Ilfracombe.——The Bristol College Green Hotel Company have purchased the entire site of the proposed hotel, nearly half an acre in extent, and at present covered by seven houses, for considerably less than 6,000*l.*——The directors of the Bridlington Quay Alexandra Hotel Company, limited, have decided to proceed immediately with the erection of this large hotel on the North Cliffe, at Bridlington Quay, the site of which commands a view of the German Ocean and the cliffs at Flamborough.——A Tunbridge Wells Hotel Company is about to be formed for the purchase of the Royal Sussex Hotel. Mr. Murray, of London, architect, is preparing plans for a first-class hotel, capable of making up a hundred beds, and which will cost between 50,000*l.* and 60,000*l.*; to make room for which the present building will be removed. The new hotel will be an adjunct to the railway terminus, to be built in close proximity to it, in connexion with the railways now being constructed in this district.——For many years there has been but too well-grounded complaint of the rapacity of English hotel-keepers. It is to be hoped this new hotel movement indicates the prospect of some amendment in that respect.

CHURCH-BUILDING NEWS.

Hedenham (*Norfolk*).—The parish church has been re-opened after undergoing a nearly complete restoration. It consists of a chancel, nave, western tower, and south porch, and is well situate on a slight hill, its south side facing the end of the village road. The chancel contains three Early Decorated two-light windows, a three-light east window with net tracery, a series of three sedilia and piscina, with ogee arches and marble columns, and several monuments of the Bedingfield family. This portion of the church was restored last year, at the expense of the rector, the Rev. Robert M. Marshall, and an oak pulpit on a stone base given by Mr. J. L. Bedingfield: the contract was taken by Mr. Spaul, of Norwich. The carving, of which a good deal occurs in the pulpit, stall-ends, and reredos, represents foliage, slightly conventionalized. The nave is spanned by a high-pitched open timber roof of the fifteenth century, the principals being stiffened by cornice-braces only. The chancel arch, which was very unsightly, and made up of brick and rubble-work plastered over, has this year been replaced by one of Ancaster stone, with foliage carved on the capitals and round the outer arch-moulding on each side: at the same time the nave has been re-seated with open oak benches, the gangways and porch paved with Maw's tiles, an iron and brass lectern placed near the pulpit, the tower arch revealed by the removal of a western gallery, and a large coat of the royal arms, an oak screen (9 feet high) placed across it, a ringers' floor introduced, and the porch and nave roofs repaired, the latter being covered with new lead. The contract for the seats and porch was taken by Messrs. Morriss & Sons, of Ditchingham; and that for the rest, with the exception of the tiles, by Mr. Spaul. The architect was Mr. Edward J. Tarver, of London. The expenses were defrayed by private subscription, including 70*l.* from the feoffees of the parish.

Langham.—The parish church of Langham has been re-opened, after being entirely restored. The tower, which was in a dangerous state, has been made good, with new stone windows in place of brick, stone quoins, rubble facing, &c. The roof of the nave has been thrown open and retiled, and a new open roof, covered with lead, has been put on the south aisle, a new roof fixed in chancel, divided into panels with mouldings and carved oak bosses. All the stone windows have been restored and reglazed, the whole church reseated, over ninety additional sittings being obtained. The seating of the chancel has been formed out of the old oak seating, with carved poppy-heads. The floor is paved with terro-metallic tiles, and heated on Mitchell's principle. There are also two new porches. The works (which were under the direction of Mr. H. W. Hayward, of Colchester, the architect employed by the committee) have been done by Mr. Hawkins, of Monks Eleigh, Suffolk, and Mr. Bremer, of Colchester, mason, who also did the glazing.

Kingsthorpe (*North Hants*).—The parish church of Kingsthorpe has been re-opened for Divine service, after a restoration, which commenced in March last. During the progress of the work a large number of interesting features have been discovered, from which it is said to be quite evident that the present church is not the original one, evidence remaining of the existence of a Saxon church. Before the present restoration, the interior of the church was much disfigured by its modern fittings and high-backed pews: the tower arch and west arch of nave on each side were blocked up with a gallery; the arcades and clerestory walls out of perpendicular; the west arch on north side depressed and sunk; a respond and pier capital crushed and broken, no doubt occasioned by settlement of the tower soon after it was built; the internal mason's work covered with plaster and whitewash; and the heads of the two three-light windows in the south chapel destroyed and oak lintels substituted. The whole of the internal fittings and roofs, except in the chancel, have been removed, and the south aisle walls, porch, clerestory, chancel arch and east gable rebuilt, and a new west window fixed in the north aisle. The west arch and part of adjoining arch in north arcade, part of west arch in south arcade and the four Norman columns renewed, and the cap of west respond and column in north arcade restored. The two old two-light windows have been re-fixed east of the porch, and two new windows west of the same. Part of the south doorway has been renewed, and a new head put on the east window in north chapel. The old parapets have been made good and fixed, and the strings, plinths, and external mason's work repaired and pointed. The old square-head window has been refixed at the east end of the south side of the clerestory, and the new windows made to assimilate with it. Three small windows of the original church (found over the arcades) have not been altered. The whole of the roofs, except in the chancel, are of new Baltic fir, wrought, moulded, varnished, and covered with lead. The floors are of deal, and the passages paved with rubbed Kingsthorpe limestone. The adults' seats are wholly formed of wainscot, with moulded ends and rails, but without doors. The children's seats are of stained deal. The chancel arch has been rebuilt in its original position, between the east piers of nave. The six small shafts sustaining the inner order or arch are of red Mansfield stone, and the voussoirs of the outer order of Ketton stone and red Broughton alternately. The carving was done by Mr. S. Poole, of Westminster. The new organ, built by Bevington & Son, of London, forms the enclosure of the vestry on part of its south and west sides. Throughout the restoration the old architectural features have been brought out, but no attempt has been made to re-design or alter anything. Additional sittings will be obtained, and the cost of the restoration will be about 2,100*l.* The restoration is mainly due to the liberality of the Thornton family. Mr. Slater, of London, was the architect, and Mr. Thompson, clerk of the works. Mr. R. Cosford, of Northampton, was the builder employed.

Ellington (*Hunts*).—The church here has been re-opened after undergoing repair. The chancel has been rebuilt, in the Early Decorated style, from the design of Mr. Scott, architect to the impropriators, the Master and Fellows of St. Peter's College. The nave has been partially re-seated, the pulpit lowered, and improved, by Mr. John Ladds, of London, architect, who designed the altar cloth, corona, and other church furniture. The churchyard has been enlarged, and enclosed by a new open arcaded brick wall, also designed by Mr. J. Ladds. The whole of the building and joiner's works have been carried out by Mr. John Bird, of Huntingdon, builder. The wood-carving to stalls and altar-table is by Mr. Blackman; the altar cloth by Messrs. Jones & Willis; the corona and lights by Messrs. Johnston Brothers; and the tiles in nave by Messrs. Maw & Co.; those in chancel by Mr. Godwin.

Stoke Mandeville (*Bucks*).—St. Mary's church is about to be rebuilt upon a new site. The existing building is so far from the people, and the approach, through swampy meadows, is often so bad, that in winter it is difficult to induce the parishioners to attend church. Under sanction of the bishop a new site has been obtained for the new church. The old chancel is to remain to serve as a chapel for burials in the old churchyard. The main features of the ancient church and as much of its material as possible are to be preserved in the new edifice. The designs have been approved by the Bishop of Oxford; and the work is to proceed under the direction of the architect, Mr. J. M. Taylor, of Manchester.

Barnwell.—The church of Barnwell as been re-opened. The edifice has been restored, relics of the past being preserved. The seats are composed of open benches in varnished pine, and placed by Mr. Eaton, of Titchmarch. A new window has been put up in the chancel: the subjects forming the same are "The Seven Acts of Mercy," "The Crucifixion," "The Resurrection," and "The Good Samaritan." A chancel organ on the Scudamore principle has been erected by Mr. H. Willis, of London. The total cost of the restoration was 400*l.*

Reading.—Greyfriars' church has been restored, and will be consecrated on the 2nd of December, by the Bishop of Oxford. Mr. Woodman was the architect employed.

Lee.—The ceremony of consecrating the new church of Holy Trinity, erected at Lee by Mr. Lewis Glenton, of Blackheath, at a cost of 10,000*l.*, has been performed by the Bishop of London. The church is built of Kentish rag stone, in the Gothic style of architecture, from a design by Mr. S. Barber, of London. It contains a stone pulpit, coloured glass windows emblematical of the most marked events in the life of our Saviour, and is internally decorated.

Swanbourne (*Bucks*).—The restoration and re-opening of the parish church here have taken place. In the same diocese forty-seven parish churches have been restored, eleven re-built, and seven new ones built, within the last ten years, in Archdeacon Bickersteth's archdeaconry alone which comprises 200 parishes. The Church of Swanbourne must have been in a ruinous condition. Sir Thomas Fremantle, the lord of the manor, undertook the greater part of the responsibility of the cost of restoration. As impropriator of the soil, he promised to defray the entire expense of building a new chancel, and contributed largely towards the repairs of the body of the church. Plans were prepared by Mr. Wilkinson, of Oxford, architect; and the building was entrusted to Mr. Groves, of Milton, under whom the work has been brought to completion. It was originally intended only to repair the chancel; but, on examination, it was found to be out of the upright, and in such a dilapidated condition that the only course left to be pursued was to pull it down, and build a new one as near as possible to the model of the original. It was considered to be of a much earlier date than the body of the church. The cost of the new chancel was 446*l.* The cost of the nave and aisle has been about 1,100*l.*, of which nearly 500*l.* have been raised by voluntary subscription; 360*l.* from the parish rate; and 75*l.* from the Diocesan Church Building Society. The porch and other portions of the church still remain in an unfinished state. The edifice as it now stands consists of a nave, with clerestory windows; a north aisle, chancel, south porch, and a west tower. The tower now opens into the nave by a pointed arch. The aisle is divided from the nave by three pointed arches resting on octagonal pillars. A small vestry is partitioned off from the aisle. The roof is of open timber, boarded between the rafters, and is supported on plain stone corbels: it is entirely new. The seats in the body of the church are of deal, varnished; in the chancel, of pitched pine; and the pulpit, which rests on a stone base, is of oak. The walls are tempered a warm colour, and a Gurney's patent stove stands in the centre of the church. The nave, aisle, and chancel are paved with common Staffordshire tile, and the sacrarium with Minton's. The mullioned stone framework of the windows in the body of the church has been preserved; but the framework of the west window, which was of wood, has been replaced by stone. A new pointed arch opens into the chancel. Here everything is new, but the old form has been adhered to. It is lighted by a three-light east window, with slender circular shafts, and three or

other two-light ones. In the south wall of hancel is a double piscina, and in the north an ambrey. A painting was discovered on pper end of the wall of the north aisle. The er portion of it, however, has been covered by the plasterer. It originally represented ortures of the souls in purgatory, with its s rising high around them. On the piece remains uncovered is to be seen, though ly disfigured, a woman trying to escape from re: her hands are held out imploringly to- s an angel, who feels inclined to release her; t at her back an evil spirit endeavours to her. Latin sentences are placed at the foot h figure, expressing the words supposed to ed by them. Over all is the figure of Christ, ed coat, with a lamb beside him. He appa- looks down in pity upon the poor souls in tory, and seems anxious and willing to assist

ngton.—The consecration of All Saints' h, at Langton, has taken place. Langton is llet in the parish of Speldhurst, and some- remote both from the parish church and the ls of ease in the district. The architect of urch was Mr. Scott, who has adopted the English style of architecture. The material dstone, from a quarry in the neighbourhood. esent the church consists only of a nave and l, and affords accommodation for 165 per- the intention being, we believe, when an ement is rendered necessary, to add aisles north and south sides; so that when the of the architect has been completed the will be cruciform. The interior also is as finished, the benches being absent. The and font, which are special gifts, are of the desk and lectern of oak. The work en executed by Mr. H. Constable, of Pens-

enhampton (Wilts).—We are requested by eflowski to state that all the carving in the hurch erected in this village was done by cept the font and pulpit, which were given Earp long before Mr. Geflowski was com- ed to execute all the other carving.

SENTING AND ROMAN CATHOLIC CHURCH-BUILDING NEWS.

lford.—The Baptist chapel in Hallfield- as been opened. The new buildings com- chapel, with side and end galleries, contain- ated accommodation for 1,000 persons; a room, 60 feet by 30 feet; a lecture-room, by 25 feet; minister's vestry, deacons' and ladies' vestry, class-room for eighty two class-rooms for adults, a library-room, tea-room, and sundry other apartments nveniences. The front of the chapel is Manningham-lane, and is set back 10 om the street boundary. The schools are in the rear of the chapel, having an end e next Hallfield-street; and distinct street es are provided to the lecture-room and boys and girls to the large upper school- The design has been based upon Mediæval es, and the details are all of Gothic form. of the buildings and furnishings is about To this has to be added excepted items, the architects' commission, the clerk of salary, and the purchase of the land, in all about 7,000*l.* The architects were Paull & Ayliffe, of Manchester; the con- or the masons' and carpenters' works, Mr. worth; for the plumbers', glaziers', and works, Mr. J. Keighley; for the slaters' r. J. Tattersall; and for the plasterers' r. T. Hargreaves, all of Bradford.

.—The new Augustinian church for the Catholics, when completed, will be one of est in the city. The style selected is rench. The chief peculiarities are the ight of the aisles, and their continuation e chancel, thereby leaving space for chapels, as in the Continental churches. hal dimensions are, length, 200 feet; exclusive of transept, 86 feet; interior 5 feet. It is intended to erect a monas- onnexion with the church. The cost of will be over 30,000*l.* About 9,000*l.* n already expended on the purchase of n the building. The works are being by a clerk of works, under the direction . Pugin & Ashlin, architects.——At rn, city Dublin, a new Roman Catholic about to be erected. The building will Early Geometric style, and will accom- out 1,500 persons. A tower and spire at the south aisle, and will rise to the height of 160 feet, forming a prominent feature of the building seen from the sea. The west gable will be pierced by a circular wheel window, under which will be two canopied doorways. There will be a colossal figure of the patron saint, St. Patrick, supported on an Aberdeen granite column rising from between these doorways. At the extremity of the aisle will stand the baptistery, forming a western transept. In the interior, a new feature has been introduced in the clerestory, which will be formed by an arcade of detached shafts and arches. The chancel will be separated from the nave by an arch supported on marble columns, and will be lighted by seven lofty two-light windows, in which will be represented, in stained glass, the figures of our Lord and the twelve Apostles. The cost, including spire, will be about 7,000*l.* The designs are by Messrs. Pugin & Ashlin, of Dublin.

STAINED GLASS.

Stoke Church (Devonport).—A memorial window has been placed at the east end of the north aisle of this church, by Miss St. Aubyn, to the memory of her father, the late Lord of the Manor of Stoke Damerel. The subjects illustrated in the tracery or upper portion of the window are the *Agnus Dei*, the Crucifixion, and the Ascension, of our Lord. In the three lower compartments or large openings, are illustrations of the following subjects, viz., Moses viewing the promised land; the children of Israel bearing the Ark over Jordan; the Archangel St. Michael disputing with Satan as to the body of Moses. The general back-ground surrounding the subjects is Mosaic, with canopies over the subjects. There is a memorial inscription at the bottom. The window has been designed and executed by Messrs. Lavers & Barraud, of London, under the supervision of Mr. J. P. St. Aubyn, of London, architect.

Dunmow Church.—A meeting of the subscribers to the window intended to be erected in this church in memory of the Rev. H. L. Majendie, twenty-eight years vicar of Great Dunmow, was recently held; Sir Brydges P. Henniker, Bart., in the chair; when it was announced that 35*l.* had been already received. The Rev. E. L. Horne was appointed treasurer, and a committee was chosen for the purpose of collecting further subscriptions, and carrying out the proposed object.

British Church (Riga).—The large east window of this church, consisting of five upright compartments with elaborate tracery, has just been filled with stained glass, by the same artists, in memory of Nicolas Hill, of Riga. The Crucifixion of our Lord occupies the chief portions of the upright compartments. A great variety of figures are introduced. Each division is kept entire in itself by the necessary architectural detail. In the tracery are angels bearing scrolls, with texts; and in the base are the monograms and emblems of Christ. Underneath these emblems are ornamental and emblematical devices consisting of the vine and wheat, in allusion to the communion altar, behind and above which the window is placed.

SCHOOL-BUILDING NEWS.

Soulbury (Bucks).—The new endowed schoolrooms here have been opened. The building has been erected in the Early English style, from designs provided by Mr. R. Durley, of Aylesbury. It is principally of red brick, pointed in blue mortar, relieved by black bricks in simple patterns, and coloured bricks in the arches and bands; with windows, doorways, buttresses, strings, cornice, &c., of Bath stone. The roofs are covered with blue and brown ornamental Stafford tiles and ridge crest, and finished with carved barge-boards and finials. The square tower erected over the entrance lobby is surmounted by an octagonal bell-turret of wood, covered with Welsh green slates, the ornamental terminal of which rises to the height of 40 feet. The plan consists of school-room, 40 feet by 18 feet; class-room, 18 feet by 18 feet; cloak-room and lobby. The school-room is lighted by two two-light windows with trefoil heads at each end; the class-room by one three-light window. The roofs are open-timbered, stained and varnished. A moulded string-course passes round the rooms at the height of 4 feet from the floor, below which the walls are rendered in cement and painted; the remainder of the walls being of coloured bricks in patterns. Ventilating fire-lump stoves and moulded chimneypieces occupy the fireplaces. Covered playgrounds and offices are attached. The cost of the building was about 700*l.*

Theddingworth (Northamptonshire).—A new school and teacher's residence have just been completed in this village, in connexion with the Congregational Church. The materials used are pressed bricks for the facing, white stone for the dressings, and the arch quoins and panellings of blue bricks. The chimneys are formed of bricks, and capped with the oversailing courses customary in the neighbourhood. These buildings have been erected at the expense of Mr. Harris, of Theddingworth, and from the designs of Mr. H. H. Vale, of Liverpool.

Oldbury.—The chief stone of the new buildings for the Oldbury National Schools has been laid by Lord Lyttelton. The edifice (of which Mr. Holmes is the architect) will comprise a school-room, 72 feet long by 32 feet wide, for boys, with a class-room, 18 feet by 16 feet; a school-room, 50 feet long by 18 feet wide, for girls, with a class-room, 18 feet by 14 feet; and an infants' school, 42 feet long by 22 feet wide, with a class-room, 21 feet 9 inches by 16 feet. The style will be an adaptation of Early English Gothic. The ends of the boys' school and infants' school facing John-street, are to be carried up as gables, and a large wheel window and two three-light windows inserted in the former, and a lofty lancet-pointed three-light window in the latter. The flank of the boys' school is also to be broken up by a gable, with a rose window and two three-light windows. The side of the girls' school will have two smaller gables, with a three-light window in each. The entrance to the boys' school will be surmounted by a lofty bell turret. The walls will be built of red bricks, with blue brick facings for the plinths, and blue bricks worked in in strings, arches, and labels. The wheel windows, and the heads and mullions of the other principal windows, will be worked in Bath stone. The roofs will be high-pitched, covered with red and blue tiles in patterns, surmounted by an ornamental ridge and crest; and the main timbers, visible from the inside, will be wrought, stained, and varnished.

Manningham (Yorkshire).—The foundation-stone of new schools, in connexion with the Wesleyan Chapel at Manningham, has been laid. The buildings will consist of a mixed school, 50 feet by 45 feet, and 21 feet high to the square (with open-timbered roof, stained and varnished), having separate entrances for the boys and girls, and a direct internal communication with the chapel. There will be seven additional new class-rooms, and a large band-room. The schools are in the Elizabethan style of architecture, of ornate character. The chapel, erected in 1858, is already too limited in its capacity for the neighbourhood, and the present school-rooms, &c., are about to be merged into, so as to form a part of, the chapel, which is to be remodelled and beautified, and have the addition of two winged staircases. The architects are Messrs. Milnes & France, of this town. The cost of the schools will be about 1,800*l.*, exclusive of the land; and the alteration of the chapel, &c., will be about 1,700*l.*, making a total of 3,500*l.* The contractors for the works are,—Masons and bricklayers, R. Crabtree & Co.; joiner, T. Taylor; slaters, W. Hill & Son; plasterer, S. Laycock; plumber and glazier, J. Scholefield.

NEWS FROM SCOTLAND AND IRELAND.

Edinburgh.—The new church which has been built at Newington, for the United Presbyterians, has been opened for public worship. The church is situate at the junction of the Grange-road with Causewayside, and has an entrance from each of these thoroughfares. The front is towards Causewayside, and consists of a high pointed gable with a buttressed tower at the south angle. In the centre of the gable is a slightly projecting portico, which forms the principal of the two entrances to the church; and above this is a large circular-traceried window filled with stained glass. The tower, which rises to the height of 100 feet, contains a moulded arched doorway on its south side, and two large triplet windows on the south and east sides respectively, the lights of which are separated by shafts with carved bases and capitals, the upper portions being filled with tracery. A mansard roof, surmounted by an enriched iron railing and vane, terminates the tower. The west gable, from motives of economy, is not to be completed in the meantime; but, when finished according to the designs of the architect, it will be surmounted by an ornamented octagonal turret 30 feet in height. In the north and south sides of the church are two tiers of doublet windows, ornamented with shafts and tracery, and in the west gable is a large triplet window filled with stained glass. The church is entered from the

front through a vestibule of unusual dimensions, on either side of which the gallery staircases are situate. Galleries are placed round three sides of the building, and these are supported on bronzed iron pillars, which are carried up and develop into arches, on which the principal roof rests. These pillars have foliated capitals wrought in carton pierre, and bronzed. The ceiling of the central portion of the church, which is 42 feet above the floor, is flat, but is broken up by a series of flat arches, which are supported by ornamental corbels. The roofs of the side gallery are considerably lower, and contain a number of bright metal ventilators. The pulpit, which is of an ornate character, is situate in the west end of the church, and is flanked by a Gothic screen. The entire carpenter work of the interior has been executed in yellow pine, stained and varnished. Sitting accommodation has been provided for a thousand persons; and at the north side of the building a hall, seated for 250 persons, and intended to be used for congregational purposes, has been erected, together with a vestry and library-room. The church is lighted from the ceiling by two sunlights, each having sixty-three burners, and round the sides by twenty brackets, each having three jets, which form a trefoil leaf. The lobby is lighted by a large Gothic lantern, having stained-glass panes bearing appropriate texts of Scripture. The lighting of the church has been executed by Messrs. Robertson & Cairns. The architect was Mr. R. Paterson, and the mason and carpenter work were executed by Mr. R. Hutcheson and Mr. A. Forbes respectively. The entire cost of the building will be about 6,000*l.*

The new church for the congregation raised by the Rev. James Gall—one of the missionaries of the Free Church—which has been erected in South Back of Canongate, has been formally opened for public worship. The building is situate in an obscure quarter of the city, and is the first completed specimen, says the *Scotsman*, of innovations which are being introduced by the architect, Mr. Pilkington. The interior is of a triapsal form, with an abrupt nave, so that the outline much resembles an equal-limbed cross, measuring 77 feet each way. The southern apse contains the platform pulpit, which is brought well forward; and from its front the pews are arranged in arcs of circles, which sweep from one side of the church to the other, the inner angles of the east and west apses being reduced to suit this arrangement. In the side apses and nave galleries are placed, those in the former being supported at the ends nearest the pulpit on spirally-foliated pillars of stone, and corbels of the same character. The roof is an open stained-wood one, with hammer-beams at the intersections of the cross. The walls are lined with wood, which is broken up into irregular-sized panels by dented straps of the same material. From the arrangement of the numerous and many shaped windows, the place is lighted in every part. Externally the appearance of the church is much more peculiar than the interior, though its somewhat redundant roof and squat walls are rather prejudicial to it. The front is composed of a centre gable, the windows in the lower portion of which are divided by buttressed piers, while that in the upper portion has its lights separated by shafts with carved capitals. On either side, filling the angles formed by the limbs of the cross, are the entrances to the building, which are formed of trefoil arches with buttressed sides and carved imposts, terminating in gablets. From either entrance a staircase leading to the galleries takes its rise, and is carried up under a separate roof; that at the north-west corner forming a junction with a tower which is placed at a short distance from the front. This tower terminates rather abruptly in a belfry composed of bold tracery, but it is intended ultimately to surmount it by a spire. To balance this tower the roof of the staircase on the opposite side is carried up and terminates in a square roof. The walls are composed of rough stone. The archivolts and tympanums of nearly all the windows are decorated with carved foliated designs, which have a tendency to relieve the massiveness of the walls. The church can accommodate about 1,100 sitters; and the cost will be about 3,000*l.*

Dumfries.—The promoters of the Scottish Free Church Territorial Mission in Dumfries some time ago resolved to erect a church in connexion therewith, and for that purpose purchased a site at Shakspeare-street. Plans have been prepared by Mr. Barbour, architect, estimates advertised for, and the building will be commenced immediately. The building will consist of a front of 63 feet in length to Shakspeare-street, formed of two twin gables in the Gothic style, with three buttresses, terminating with pinnacles. Above the entrance-door is a wheel window, 13 feet in diameter, divided into twelve compartments. A belfry rises from the gable on four trefoil pillars, and is surmounted by a spire terminating in a vane. The height of the belfry above the gable is 30 feet, the total height from the ground to the top of the spire being 75 feet. The other gable will form the north end of the church. In this gable there is a window in the Early English style, 22 feet in height and 13 feet wide. The front will be built of coursed and ganged work, the material being red freestone, and the dressing of polished freestone. The dimensions of the church internally are 58 feet by 38 feet. It will be seated for 450. Beneath the south end of the church there will be a school-room, 37 feet 8 inches by 29 feet 6 inches. The expense of the building when finished may be about 1,200*l.*

Glasgow.—Another stained-glass window has just been fitted in the south-west angle of the nave of the cathedral, thus completing the filling of the windows on that side of the nave. It is the gift of Sir Michael Shaw Stewart, bart., M.P. for Renfrewshire, and was manufactured at the royal manufactory, Munich, from designs by Mr. George Fortner, designer of the windows of Cologne Cathedral, and well known as a painter of Scriptural and religious subjects. The subjects of the window have been taken from the Book of Daniel. That in the left light represents Daniel interpreting the dream of Nebuchadnezzar, and bears the motto—"There is a God in Heaven that revealeth secrets." The centre shows Daniel expounding the writing on the wall to Belshazzar. The king is horror-struck, and the queen is seen standing behind him, looking at the prophet with an expression of awe on her countenance. The third compartment of the window represents Daniel, who has just been taken out of the den of lions, standing by the side of King Darius. An improvement has been made in the tracery at the top of this window, by introducing purple with the blue, which, combined with the yellow golden hues, has a better effect than the traceries of the other windows. There has just arrived a window for the crypt, by Messrs. Clayton & Bell. Six of the clerestory windows have been commissioned, and are now being manufactured according to designs.

Paisley.—The foundation stone of the new Grammar School, which is in course of erection in Oakshaw-street, has been laid. Mr. Brown, while filling the office of provost in 1859, being impressed with the importance of having the three town schools united in one academy, had a plan prepared by Mr. J. J. Lamb, architect, for the erection of an addition to the old Grammar School, in Churchhill, concentrating the different departments. The estimated amount necessary to accomplish the alterations was about 1,000*l.* Mr. Brown headed the subscription, and his appeal was so promptly responded to, that in a few days about 2,000*l.* were subscribed. Subsequently the original intention was changed to a proposal for the erection of an entirely new edifice for the three schools, the result being the purchase of ground on the south side of Oakshaw-street, extending from the old Grammar School and the commencement of the building now in progress of erection for the new academy, from plans designed by Mr. Lamb. The entire expense for the undertaking is expected to reach about 3,000*l.*, of which only about 600*l.* remain to be furnished. The building is now in such a forward state that the general arrangements can be understood, and its architectural character comprehended. The main entrance is in the centre of the northern or Oakshaw-street elevation, and after passing the vestibule up a flight of steps a central hall is reached, opening to the right into the room for classical education, 45 feet long by 21 feet wide, and on the left into the room for the junior English branches, of a similar size. In direct communication with this last room is a class-room for the senior English branches; and immediately to the south is the commercial-room, 33 feet long and 22 feet wide. There is also a good-sized room for teaching the modern languages, ladies' classes, &c., with a ladies' retiring-room attached. The several rooms have lofty ceilings, namely, 17 feet. The building is one story in height, and the style of architecture is Gothic, bold and massive in character. Effect is given to the front by the broken lines of the building, gables being projected out with corbelled oriel windows overhanging the line of wall, and the roof will be broken up in its long lines by dormer windows thrown up into the slopes. The following are the tradesmen with whom contracts have been gone into:—Mr. Wm. Bowes, mason; Messrs. J. Bryce & Son, joiners; Mr. C. Wallace, jun., slater; Mr. [illegible] Jeffrey, plumber; Mr. A. Mitchell, plasterer; Mr. T. Reid, smith. The resident inspector of works is Mr. M. Macfarlane.

Inverness.—The new Free Mission Chapel has been opened. The edifice stands on the west side of the river, and forms a prominent object from the Chain Bridge. It is in the Early English style. The entrance is in the centre of the gable fronting the street, with a lobby inside, and there is also a side entrance for the minister. The church is chiefly lighted from the roof. In the gable to the street, which is of dressed freestone, there is a three-light lancet window over the door, and a single-light one on each side, the whole being terminated by a bell-turret. In the west gable there is a wheel window, with cusped tracery filled with stained glass in the centre, and a single lancet on each side. The length of the interior is 60 feet, the breadth 40 feet, and the height 30 feet; and the building will contain about 400 sittings on the ground floor. There are no galleries. A platform is substituted in place of the pulpit. The walls are tinted, and all the woodwork varnished. The seats are moveable, and in the form of open benches. The church is lighted at night by three gaseliers suspended from the ceiling, and a few lights on the walls. The architect was Mr. James Matthews; and the contractors for mason's work, Messrs. Cumming & Ellis; for carpenter's work, the late Mr. A. Nobbs; slater's work, Mr. J. Russell; plasterer's work, Mr. A. M'Intosh; plumber and gasfitter's work, Mr. W. Mackay. The cost of the building, exclusive of the site, will be about 950*l.*

Manorhamilton (Connaught, co. Leitrim, Ireland).—The Right Hon. John Wynne is about to erect a glebe house at Ballaghamechan, near Manorhamilton. The works are to commence early in the spring, from plans made by the diocesan architect, Mr. J. F. Fuller.

ALL SAINTS' CHURCH, WINDSOR.

The twenty-third birth-day of the Prin[cess] Royal, on Saturday last, was celebrated at W[indsor], at her Majesty's desire, by the laying of [the] foundation stone of a new church, which [is] intended to afford accommodation to about [1,000] persons, and in which the whole of the seats [are] to be free and unappropriated. The Prin[cess] herself laid the stone. The total cost of the [church] will be about 4,000*l.* It will form a chapel[-of-]ease to the parish church, and will be dedicated to All Saints. It is situate in Frances-road, [on] the Lammas lands, and will be constructed in [the] Gothic style, of red and black bricks and dress[ings] of Bath stone. The nave will be about 82 feet [in] length, the chancel about 35 feet, and the [whole] will be 23 feet 6 inches. The total height will be 55 feet. Mr. Blomfield is the architect, [and] whom the works will be carried out by Mr. [Piper] of Windsor.

Some progress has been made with the erection of the outer walls have already risen to the height of about 5 feet. On the occasion, the whole of the area of the church was covered with a temporary awning; and, for the special accommodation of the Crown Princess of Prussia and other members of the Royal Family, the committee erected at the chancel end of the church a platform, covered, but open at the sides, for the erection, together with a private entrance for the accommodation of the royal visitors, was decorated with flowers, armorial devices, and other ornaments. The Castle and Etonian lodges of freemasons, with members of other lodges in the county, to the number of about 200, wearing the insignia of their several ranks and degrees of the mystic fraternity, took part in the ceremony.

HOUSES FOR THE POOR IN THE CITY.

COURT OF COMMON COUNCIL.

At a recent meeting, the first in the mayoralty, Deputy Fry, chairman of the Improvement Committee, called attention to a report of them on the reference to them relative to the Bridgebury Estate Surplus Fund, and the erection of improved lodging-houses for the labouring poor, and recommending the appropriation for the purpose of a portion of the ground in Victoria-road, and also the erection of dwellings thereon, the estimated cost of 20,000*l.* Alderman Wilson and Alderman Besley spoke strongly in favour of the adoption of the report on the ground of the necessity towards the poor, as did also Mr. [illegible]. On the other hand, Mr. Scamell expressed

ars that it was the better class of mechanics who ere now sought to be benefited rather than the bouring poor, who stood much more in need of mpathy with regard to domestic accommodaon. The report was agreed to.

AMBRIDGE ARCHITECTURAL SOCIETY.

We have received a letter from the secretary of his society in answer to "Fair Play;" but as it iterates the mention of his own works, and mits the omission of those of others (for the ason they were not thought of or not known), nd so leaves the matter just where it was, we nnot give space for more than the conclusion it:—

"I speak in the name of the committee; for though of urse I, as secretary, wrote the first draught of the re-rt, it was twice revised by the committee, and once by e president (the Rev. Dr. Corrie, Master of Jesus Col-ge), so that I must decline being held solely responsible r it.

The coolness with which your correspondent says he ould have '*desired*' the proposed course of lectures be on Classical architecture," is somewhat amusing. A cturer is generally allowed the privilege of choosing his wn subject; and in this case Gothic was chosen not only cause the first rule of the society says that the object all be to promote *ecclesiastical architecture*, but also cause, in spite of this, not long ago a course was given Classic work, which I fear 'Fair Play' did not at-nd."

WEDGWOOD MEMORIAL INSTITUTE COMPETITION.

The following is the award of the judges ap-inted to report upon the competition designs for the treatment and decoration of the façade the Wedgwood Institute, Burslem, in all or any nd of ceramic ware, coloured bricks, mosaics, d terra cotta, as structural features of an archi-ctural composition, with a view of creating a stematic interest in ceramic architecture, both nong artists and manufacturers."†

To the Committee of the Wedgwood Memorial Institute, Burslem.

ntlemen,—By your permission, and in order to save e, we have proceeded to examine the designs for the amic façade of the Wedgwood Memorial, in the inevi-le, but much-regretted absence from England on blic duties, of our colleague, Mr. Robinson. We serve, that although numerous copies of the particulars re applied for, only seventeen competitors have ulti-tely appeared. We are, however, by no means dis-raged at this fact. The form of architectural art, for ich the prizes were offered, in many respects presents f as a novel one to our generation; and it is more to interest of its successful cultivation hereafter that it uld at the outset be recognized as one which possesses le-ities which can only be mastered by mature study s satisfactory, that out of the designs sent in, there uld be contributions well deserving of the prizes which as our duty to allot.

ve assign the first prize to the design inscribed—

'What's done we partly may confute,
But know not what's resisted.'

e author of this design, more than any of the other petitors, appears to us to have comprehended that it was asked for was not simply a façade in some ognized form of architecture with ceramic ornamenta-superadded, but a study of architecture, which, while forming to acknowledged principles, should make the ous forms of pottery the basis, not only of its decora-, but of its constructive features.

his design presents a graceful and evenly-balanced tation, in a rather eclectic style, viz., quasi-Venetian, some Gothic elements added. The material is red k, which admits of terra-cotta capitals to the pilas-; and the accessories exhibit a good acquaintance h the various resources of ceramic art, as evinced by ckey elevation, and by the two sheets of large sized one of full-sized details which accompany the eleva-. These display some very graceful forms, well cal-ted for pottery.

e venture to suggest that the elevation would be im-ded if the windows of the ground-story were com-t into an arcaded treatment by the introduction on side of a blank panel which might be filled with a mic picture, where the circumstances will prohibits the pierc-n of any openings for light. In the design as sent in, space appears as part of the ordinary wall.

e assign the second prize to the composition bearing motto 'Sub Spe,' which is a masculine design, show-well-laid-out constructional treatment, though not isfactory a grasp of ceramic art as the one to which have assigned the first prize. The style of this eleva-, is also eclectic, but approaches more nearly to Italian ic than the first one. The author deserves credit for ay in which he has broken the uniformity of the e by projecting two quasi-wings, with a very good ght window in the ground floor of each, and two tiful single windows above: the cornice and attic are good. The portion of the design which is least suc-fully treated is the arcading for mosaic paintings in pper story of the centre. In particular, the figure edgwood, in the middle panel, as drawn, stands out dark spot from the whole composition.

assign the third prize to the author of the design ded 'Self Help,' which is also masculine in charac-nd in a style resembling 'Sub Spe,' though a little decidedly Gothic. It lacks the well-balanced treat-of centre and quasi-wings which the design marked Spe' gives, and its ornamentation is more spotty roken up. The introduction of subjects in the win-spandrels, incised in stone and filled up with lead or composition, however commendable in itself, is rather out of place in a competition intended to show the various resources of ceramic art; and the way in which the panels are cut off by a horizontal line just below the apex of the arch is very unartistic.

In assigning the fourth prize, we had a difficulty, as the author of the design, which was otherwise clearly entitled to it, had not complied with the condition which prescribed 3-8ths of an inch to a foot as the scale of the elevation generally. But as it stood out in marked superiority above the remaining designs, and as details to a large scale were copiously supplied, we judged it most equitable not to deprive the author of a reward which we might otherwise have declined to allot at all. It bears the motto 'Art est celare artem, non sine labore.' It is designed in a style founded on early French Gothic, and evinces considerable industry and careful study of Gothic detail; but it is hardly successful in its application of the principles of Gothic to ceramic material. It altogether wants repose, although its author has evidently taken great pains to make it really an example of ceramic architecture. More study has indeed been expended upon its elaboration than has been bestowed by the authors of either 'Sub Spe' or 'Self Help' in working out their views.

We avail ourselves of the permission to make additional honourable mentions, by giving credit to 'Heartsease" for a general idea of symmetry and consequent repose, which produces a not unpleasant effect, although his design is deficient in specially ceramic treatment, while the combination of cornice and window in the upper floor is decidedly inconvenient; and to 'In hope I bide,' for the industry with which the author deals with coloured materials, although his *ensemble* fails in general elegance and proportion. Some of his mosaics are prettily designed, but the ornament is generally rather facile than excellent. The cornice, plinth, and string-course of 'Monitor' are also prettily conceived: the remainder of the design is not so worthy of commendation.

A. J. B. BERESFORD HOPE.
M. DIGBY WYATT.

London, November 17th, 1863."

THE FIRST EXHIBITION OF PICTURES BY BRITISH ARTISTS.

In the opening address at the Society of Arts, already mentioned, Mr. Hawes said,—

You are no doubt aware that the first exhibition of pictures by British artists took place in the Society's house in 1760, and that from the assistance the Society afforded to artists at that time, sprung the annual exhibitions by the Royal Academy, which commenced in 1768.

I have before me three letters from Frank Hayman, Chairman of the Committee of English Artists, and subsequently a Royal Academician, to the then secretary of the Society, which I will read:—

"February 26th, 1760.

SIR,—The artists of this city, having resolved to raise a sum for purposes of charity by the annual exhibition of their works, entreat the Society to allow them the use of their room from the 21st of April to the 3rd of May. This favour they consider as very important. The publick concurrence of the Society will give to a new practice that countenance which novelty must always need, and the Arts will gain a dignity from the protection of those whom the world has already learned to respect.—I am, sir, your most humble servant,

F. HAYMAN, Chairman of the Committee.

To the Secretary of the Society for the Encouragement of Arts, &c."

"St. Martin's lane, 13th May, 1760.

SIR,—You are requested by the artists whose works appeared in the late exhibition, to return their sincerest thanks to the Society for the use of their room and the honour of their patronage.

Whatever improvement the arts of elegance shall receive from the honourable emulation which publick notice may excite, will be justly ascribed to those by whose example the publick has been influenced.—I am, sir, your very humble servant,

F. HAYMAN, Chairman of the Committee.

To Dr. Templeman, Secretary to the Society for Promoting Arts, &c."

"St. Martin's-lane, 9th December, 1760.

SIR,—The favour conferred last year on the artists by the Society has encouraged them to solicit the use of their room for a second exhibition.

This request may be now granted with less inconvenience to the Society, as the exhibition will be deferred to the beginning of June, a month in which the meetings of the Society are more rare than in the winter, the artists being desirous that the pictures drawn for the prize should be removed, lest any man should a second time suffer the disgrace of having lost that which he never sought.

The exhibition of last year was crowded and incommoded by the intrusion of great numbers, whose stations and education made them no proper judges of statuary or painting, and who were made idle and tumultuous by the opportunity of a show. It is now, therefore, intended that the catalogues shall be sold for a shilling each, and none allowed to enter without a catalogue, which may serve as a ticket of admission.

These regulations, which have been very deliberately formed, will be doubtless thought expedient and useful, and the artists flatter themselves that the improvement of national taste which will be promoted by comparing the works of the different performers, is not unworthy the care of the Society.—I am, sir, your most humble servant,

F. HAYMAN, Chairman of the Committee.

To Dr. Templeman, Secretary to the Society for the Encouragement of Arts, Manufactures, &c."

In the Society's house, also, was held the first exhibition of new inventions, about a century ago, and the models exhibited were illustrated by lectures and by *viva voce* explanations.

THE BUILDERS' BENEVOLENT INSTITUTION.

A GENERAL meeting of the friends and subscribers to the above institution was held at the London Tavern, Bishopsgate-street, on the 26th instant, for the purpose of electing three pensioners, two males and one female, from a list of nine candidates, as recipients of the above charity. Mr. Alderman Jas. C. Lawrence occupied the chair. The male's pension is 24*l.*, and the female's 20*l.* per annum.

The Chairman, in opening the proceedings, said that they were then met in the sixteenth anniversary of the institution, and the twenty-second election for the purpose of placing three pensioners on the funds. He was sure, in expressing his regret that they were only enabled to elect so few out of so many candidates, that he was also expressing the regret of the friends and subscribers by whom he was surrounded. They, however, earnestly hoped that, as the principles and beneficial results of the institution became known, they would obtain a great accession to the number of subscribers, so that they might ultimately have sufficient funds at their disposal to meet the exigencies of so many candidates, the most of whom, if not all, were deserving of the benefits of the institution.

The poll was then declared open, and, at its close, William Standfast (builder and carpenter), and William Goodwin (plumber and glazier), both of whom had been in business many years, but became reduced through losses and frequent illness, were announced as the successful candidates. The highest female on the list was the widow of a bricklayer.

FALL OF A HOUSE IN ISLINGTON.

ON Thursday morning last, a few minutes before twelve o'clock, the Three Wheatsheaves public-house, in process of erection by Mr. Chapman, builder, under the direction of the brewer's architect, Mr. Williams, fell in with a terrible crash, burying a number of men in the ruins, and killing, we regret to say, two, if not more.

The building adjoins the entrance to the Agricultural Hall, Upper-street, Islington, and was being hurried on, in order that a portion might be ready by December 7th, the opening day of the Smithfield Cattle Show. It was partly roofed in; for the works were continued during the night, as well as the day, and, probably in consequence of the wet weather, the lower part had not sufficiently set to support the weight above.

ARCHITECTURAL ILLUSTRATION.

NOT a little have I been gratified by Professor Donaldson's able and interesting, and, I may add, instructive opening address; but, when speaking of illustrated publications, he omitted to make mention of what has been done of late years by wood-engraving applied to architectural delineation, and which has certainly helped in no small degree, if not exactly to popularize, the study of architecture, to lead to and facilitate the acquisition of a taste for it. No more than proper is it that there should be costly elephantine folios provided for those who can afford not only to purchase them, but find house-room or shelf-room for them afterwards. But when a single volume is brought out in the lump at the advertised price of forty guineas, as was Murphy's "Arabian Antiquities," it is unnecessary to remark that such price operates as a prohibition to all but the wealthy, among whom architectural students are not to be reckoned. Even such price is quite modest and moderate in comparison with the almost fabulous cost of some works. In one of Quaritch's catalogues I have met with a French work which was stated to have been originally published at the price of 1,400*l.* sterling!—a price not for the million most assuredly, but altogether exclusively for millionaires. However, what I have just been saying is to be regarded as a digression and *hors-d'œuvre*. Returning from my divergent *excursus*, I give it at the risk of being contradicted, as my opinion that if not only a taste for, but some intelligence of, architecture is to be diffused—as surely very desirable—among the general public, it must be by providing for the many a moderate-sized and moderate-priced class of publications,—books that may be housed on the shelves of a parlour bookcase; and, what is not least of all to be considered, can be held in the hand without fatigue; therefore, may so far be called *manuals*. A beginning has at last been made in that direc-

nis is not what "Fair Play" says.
e are indebted to the editor of the *Staffordshire iser* for an early copy.

tion. Parker's "Glossary," and Fergusson's "Handbook," have shown what can be accomplished on, so to say, a miniature scale; and they have both done much to initiate the profane, the outsiders, into the Eleusinian mysteries of architectural study. Yet what has been done by them might be improved upon, for the "Glossary" gives only details and separate features, and the "Handbook" only general views, more pictorial than architectural,—certainly quite insufficient for more than very partial, inadequate, and therefore rather tantalizing information.

Views of buildings are decidedly more popular than elevations, and have at least this advantage that they convey an idea of their locality and immediate surroundings, which, though a matter of no small importance, is completely kept out of sight when nothing more than an insulated elevation, quite apart from any other objects, is shown. Without having what the Germans call a "situations plan," a very erroneous idea may be formed of the actual position and locality of an edifice from its own ground-plan and elevations alone. Take, for instance, our cathedrals: some of them are quite hedged in and almost choked up by adjoining buildings; and however unfavourable that circumstance may be, it is what ought to be fairly shown.

Of one species of illustration there is more frequently than not a sad dearth, namely, of *letter-press* description. Sometimes there is not even a single line of explanatory text, however requisite it may be. It is little less than nonsense to say that the designs speak for themselves: without an interpreter they do not speak perfectly intelligibly to every one. From drawings, even architects can understand only just as much as they happen to know, which may perhaps be comparatively almost nothing; for it is only piecemeal that a building, or design for one, can be explained. A picture is whole; is, so to say, a self-contained subject: quite different is it with a production of art architectural, which, supposing it to be worthy of being so fully exposed for admiration, must be exhibited in a series of separate drawings, from which the total has to be spelt.

AN ART LOVER.

WORNUM'S WALPOLE'S ANECDOTES.

SIR,—I am sorry to have to trouble you again about such a mere trifle. I have only just seen your number of the 7th instant, in which Mr. Cunningham claims to have furnished me with the substance of my note on the birth of Grinling Gibbons, and complains that I did not acknowledge the obligation. He is quite mistaken in what he says. I never saw anything about Grinling Gibbons in the *Illustrated London News*, a paper I very seldom see; and I have forgotten nothing.

The facts are these: Many years ago—almost twenty—I read in the *Daily News* a paragraph stating that the sculptor in question was a Dutchman. I immediately wrote to the editor of that paper, and asked him to oblige me with the *authority* for the statement. I received in reply a short *anonymous* note, giving me the information I required, and I believe I thanked the editor for his courtesy. If he had signed the note, I should certainly have referred to him. The insinuation, therefore, with which Mr. Cunningham closes this Walpole "old Elderberry" matter is altogether without justification.

National Gallery. R. N. WORNUM.

THE EXHIBITION BUILDING.

SIR,—It will be in recollection that on the debate last session as to the purchase of this building for the nation, the Chancellor of the Exchequer suggested as a reason for the purchase, that an indefinite time might be taken by the contractors for its removal; whereupon the contractors wrote a letter to the *Times*, stating that they should proceed to take down the building on the then next Monday morning. Every one admired the fairness and public spirit of the contractors.

Having been away from Town from that time to the present, I feel considerably surprised and disappointed to find that nothing in the way of removing the building has yet been effected beyond taking the glass out of the domes.

I do not suppose that men of the respectability and position of the contractors would do otherwise than as they held out to the public: nevertheless, there the building stands.

I would beg to remind them that the removal of so large a structure will necessarily be attended with inconvenience to the immediate neighbourhood; but that inconvenience will be very much aggravated if it be deferred till the London season, when everybody will be flocking to the Horticultural Gardens and to the South Kensington Museum. Besides, it is of great importance that the site should be cleared by next session, in order that we may decide how to utilize it.

I trust that this notice of the matter in your columns may elicit a satisfactory explanation from the contractors.

S. K.

ARCHITECTS' ACTIONS.

Gosling v. *Steers and Others.*—This was an action in the Court of Exchequer, before Mr. Baron Martin, brought by an architect against four maiden ladies carrying on business as ironmongers in Oxford-street, to recover the sum of 49*l.* as commission for preparing plans for building a house. The defendants pleaded never indebted.

Mr. Huddlestone and Mr. Griffiths appeared for the plaintiff, and Mr. H. T. Cole for the defendants.

It appeared that the ladies were desirous of building a house at Red-hill, and called upon the plaintiff to consult him upon the subject. He accordingly drew up plans and specifications, which were approved by the defendants. The usual notice having been given, several tenders from builders were sent in for erecting the building, the lowest being 997*l.* Upon being informed of the amount of the lowest tender, the defendants had refused to have anything more to do with the matter.

The defence was, that the ladies had distinctly and repeatedly impressed upon the plaintiff that, if the execution of the plans amounted to more than 600*l.*, the latter would be perfectly useless to them; and he had replied that if the tenders exceeded that sum he should not charge them anything, as the plans were only drawn out upon approval.

Witnesses having been called on both sides,

The jury retired, and on returning were discharged without agreeing to a verdict. The evidence leads us to think that the architect has not been well treated.

"RATEABLE VALUE."

IN the Court of Queen's Bench, Westminster, on November 11, the case of the London and North-Western Railway Company *v.* The Parish of Cannock, Staffordshire, raised one of the numerous questions arising as to the rating of railways, and a question of constant recurrence and of some importance. The Cannock line is worked at a local loss, it is alleged, and only with reference to the general interests of the company and the traffic on their main line. As they cannot no net profits in the parish, they contended that they were only rateable at the *minimum* rate of 40*s.* an acre as arable land; whereas the parish officers insisted on rating them at the amount of 325*l.* a year, as the net annual rateable value of the part of the line in the parish. The question was whether this rate was good and valid.

The Lord Chief Justice was of opinion that in every case, every part of a line was in fact "a feeder" to all the rest of the line, as it brought traffic on it to every other part.

Mr. Justice Blackburn remarked that if the Cannock line were really worked at a loss, it would not be worked at all.

Mr. Justice Wightman put the case of a man taking a piece of land from year to year, not at all for the purpose of profit, but because it was convenient to his occupation of contiguous land. Would he not be rateable for it? and, if so, would not the rent be paid for it be the rateable value?

The Lord Chief Justice said there might be a beneficial occupation irrespective of profit, and not to be ascertained either by profit or by the rent; but that only showed that those modes could not be resorted to of estimating the annual value, and that other modes must be resorted to. All that the Court could say was, that they thought that the Cannock line must be of some annual value to the company, and that must be ascertained in the best way it could be; but they could not decide that there was no rateable annual value.

Judgment for the parish.

Miscellanea.

CROYDON SURVEYORSHIP.—Mr. B. Latham, C.E., of Ely, has been appointed engineer and surveyor to the Croydon Local Board of Health.

INSTITUTION OF CIVIL ENGINEERS.—On the 10th instant, Mr. Hawkshaw, president, in the chair, the paper read was "Description of Lighthouses lately erected in the Red Sea," by Mr. W. Parkes. On the 17th inst., Mr. J. R. McClean, vice-president, in the chair, the paper read was on the "Duty of the Cornish Pumping Engines," by Mr. W. Morshead, junior.

THE ENGLISH CHURCH AT BADEN-BADEN.—An effort is being made to place the English church at this much-frequented Continental town on a better footing. Services have been held in the summer in the Hospital Church, which is also used by the Roman Catholics and German Protestants. In the winter, the dining-room of the Hôtel d'Angleterre is the only available place. It is proposed, says *Galignani*, to build a suitable church, at a cost of 2,000*l.* The site is granted by the town. Nearly 1,000*l.* have been subscribed, and a loan of 500*l.* is offered by the Society for the Propagation of the Gospel. The movement has received the sanction and encouragement of the Bishop of London.

NEW WATER-WORKS.—It is intended to apply to Parliament, in the next Session, for a bill to authorise the incorporation of a company for the construction of Water-works from Marham, in Norfolk, to the town of Wisbech, for sanitary and other purposes in the borough.——A Parliamentary notice has been issued by the Yarm Water Company, who wish to take powers to supply with water Haughton, Haughton-le-Skerne, Dinsdale, Morton Palms, Sadberge, Middleton-St.-George, Long Newton, Elton, Egglescliffe, Preston, East Hartburn, Coopen Bewley, and Billingham, in the county of Durham; and Stainton, Acklam, Linthorpe, Marton, Ormesby, Normanby, Eston, Lackenby, Lazenby, Wilton, Coatham, West Coatham, East Coatham, and Kirkleatham, all in the North Riding of Yorkshire. The proposed extension of powers is likely, it is said, to encounter opposition, both from the towns and local railway and other companies.——A new reservoir is to be constructed at Tonbridge.

THE IRISH MEMORIAL TO THE LATE PRINCE CONSORT.—A meeting of the Prince Albert Memorial Committee was recently held, at which it was announced that Mr. Foley, R.A., had undertaken, at the request of that body, the design and execution of the memorial in Dublin.

GLASGOW ARCHITECTURAL SOCIETY.—The first meeting in the new rooms of this society, 188, Bath-street, was held on the 16th instant, Mr. Wm. Clarke, president, in the chair; when a paper was read by Mr. Thomas McGuffie, on "Inspectors: their Qualifications, Duties, and Responsibilities;" which was followed by a discussion.

SOCIAL SCIENCE ASSOCIATION.—At a meeting of this Association, held on Thursday, the Hon. W. Cowper, M.P., in the chair, it was resolved, on the motion of Mr. G. W. Hastings, seconded by Mr. Godwin, F.R.S., that the next congress of the Association should be held in the city of York. Mr. Cowan, Mr. Gregson, M.P., Mr. Tite, M.P., the Rev. R. Burgess, and others, took part in the discussion. A deputation from York had previously represented the views of the city.

NAVAL ARCHITECTURE. — Everything is becoming unsettled in this science, it appears. We lately noticed a proposed return to something like the Indian canoe shape for ships, and now we observe a tendency to adopt the enormous Malay or other Eastern outriggers, as a great deal of scientific speculation is going on about the possible speed which may be attained by ships with immensely long iron cross spars, allowing a vast spread of canvas, which can be folded in a trice from the deck with a very small steam-engine working the necessary apparatus. It is hoped to get a consecutive twenty miles an hour out of sailing vessels this way, and commence a new era in nautical matters.

WHAT IS A PAVED ROAD?—Farringdon-road and the side streets near the Metropolitan Railway Terminus, which form part of the Clerkenwell improvements, are much complained of, the roads in wet weather being almost impassable from the quantity of mud and the number of holes; and this state of things arises from the differences as to what constitutes a "paved" road. The corporation of the city of London, who are the improvement commissioners, have several times called upon the Vestry of Clerkenwell and the Holborn Board of Works to take to the roads in question, but this they refuse to do until, in the words of the Act, they are well and sufficiently "paved," contending that a "macadamized" road not a "paved" road.—*City Press.*

THE HAYMARKET THEATRE. — Mrs. Charles Mathews astonished many who had known her only in violent farce, by the power she exhibited as Medea, in "The Golden Fleece;" and this astonishment has been increased by this lady's performance of the Countess of Windermere, in the new comedy, "Silken Fetters," altered from "Scribe." This may truly be called her first real season in London, and she will be better appreciated henceforth. The initial difficulty in the plot for an English audience has been got over well as it could be, and the piece interests. Mr. Mathews has an amusing part, Caleb Codicil, a well-intentioned Marplot, and plays it *more* to perfection. Mr. W. Farren, in a difficult portion, has the opportunity to exhibit more feeling and power of pathos than is usually afforded him, and takes very good advantage of it.

PRESENTATION FROM WORKMEN.—Last week the inhabitants of Chaddesley Corbet gave a dinner to the men employed by Mr. Lovatt, the contractor, on the restoration of the parish church, and the men made it an opportunity to testify their respect to one of the churchwardens, Mr. James Bate, a gentleman who has been very instrumental in the work. Unknown to him they had set themselves to work, and manufactured a stone flower-vase, and chose this occasion for its presentation to Mr. Bate, at his own house, together with an address, of which the following is a copy:—"Dear Sir,—We, the undersigned masons of Chaddesley Corbet, for the courteous manner in which you have acted towards us as our employer, also for the favours you have granted to him and us when in your power, and for the high respect we have for you, beg to present you with the accompanying vase, and sincerely wish that you may long live to see a flourish within it." The stone was taken out of the quarry at the "Farm-fold," and the vase designed by H. Charlton, foreman, and executed by the undersigned—Joseph Gay, W. Harris, W. Baldwin, Frank Hayes, H. Chalton, and J. Broad.

BOLTON IMPROVEMENTS.—Application is to be made to Parliament in the forthcoming session, for power to extend the waterworks, and acquire additional sources of supply, make reservoirs and aqueducts, &c.; and also to form a public park, and to erect a townhall, with approaches, &c.

THE MAHOGANY TRADE.—Mahogany is down in England as well as in the United States, so that it will not pay to cut it. Our cuttings in this colony for the next year will not be more than one-third of the usual quantity, and the same may be said in regard to logwood; so the chances for trade for the year 1864 in this colony are very slim.—*Honduras Paper.*

NEW ZEALAND INDUSTRIAL EXHIBITION.—It is stated that the proposed Industrial Exhibition for New Zealand, to be held in 1865, is receiving the general support of the colony, and there is a probability of it being a great success. It is intended to be held in Dunedin, in January, 1865, and the Government of the province have come forward liberally towards the cost of the building. Great inducements will be held out to English machinists and manufacturers to contribute.

THE COTTAGES AT SANDRINGHAM.—An outcry is properly being made at the present time with reference to the awful state of the cottage houses in Norfolk. The cottages on the newly-acquired estate of the Prince of Wales, at Sandringham, are in a very bad condition, and utterly inadequate to the wants of the families. It is gratifying to be able to state, that his Royal Highness has evinced a disposition to remedy this state of things. Orders have been given for immediate repairs to be made, and it is expected that this will speedily inaugurate a better state of things for his cottagers.

NEW LIGHTHOUSE AT ARRANMORE, IN IRELAND. During many years past, the north-west coast of Donegal has been the scene of lamentable losses both of life and property. This has been caused, to a great extent, by the lighthouse on the Island of Arranmore being abandoned. A new lighthouse has just been completed there, at an expense of close upon 10,000*l.* The structure is of granite. Messrs. W. Crowe & Sons, of Dublin, were the contractors. The lamp about to be erected is the first that has been constructed by an Irish establishment, Messrs. Edmonson & Co., of Dublin. The new light is to be a flash-revolving one of the first class.

MUSEUM OF OLD CLOTHES IN THE HARTLEY INSTITUTE, SOUTHAMPTON.—One room in the Hartley Institute, at Southampton, is set apart for the preservation of the wardrobe and furniture of the mother of Mr. Hartley, the founder of the Institute, in accordance with the eccentric will of that gentleman. In this room may be seen bonnets, dresses, shoes, tapestry, fans, drawers, china, chairs, &c., of a wealthy merchant's wife of the last century. The bonnets are of the Sarey Gamp style, the shoes of satin, with small wooden heels, and displaying the neatness and elaborate workmanship which were lavished by the sons of St. Crispin on such feet coverings. The fans are large and clumsy, and one has the Lord's Prayer printed on it.

THE PROPOSED CAVALRY BARRACKS IN CHELSEA.—A deputation from the Chelsea vestry has waited upon Earl de Grey & Ripon, the Secretary of State for War, to express their opposition to the proposal on the part of the Government to erect cavalry barracks at Quail's Field, on the west side of Sloane-street, south of the Brompton-road. Among the deputation were Viscount Chelsea and Mr. Tite, M.P. The deputation urged that the parish of Chelsea had already an undue proportion of this class of buildings, and that the result would be that the whole character of the neighbourhood must greatly suffer. They stated that "the vestry think a more desirable locality for the proposed barracks would be found on the Surrey side of the Chelsea Suspension Bridge. This site would combine in a remarkable degree all the desiderata of such a building, viz., close proximity to the Queen's Palace, to a railway communicating with all parts of the kingdom, and to a fine park and unfrequented roads for horse exercise." Earl de Grey in his reply said that, on the whole, the site in question was the best that could be found. He would, however, give the objections raised his best consideration. In reply to a suggestion from the Rev. R. Burgess that a suitable barrack might be erected on the opposite side of the river, his lordship said the fact that the barrack would in that case be separated from the Royal Palaces, the Houses of Parliament, and other public buildings, was a fatal military objection to any scheme of that kind.

THE PORTSMOUTH SURVEYORSHIP. — The borough council, as the local Board, under the newly adopted local Government Act, have elected Mr. Angell as their surveyor.

THE VOTIVE CHURCH, VIENNA.—We hear that the Vice-King of Egypt has made the Votiv-Kirche in Vienna a present of twenty-three blocks of Oriental alabaster, taken from the alabaster quarries in Upper Egypt, towards the erection of an altar. The Sheikh of Eden, Joseph Karam, has contributed twenty-two cedars for the same purpose.

A PROMENADE PIER FOR EASTBOURNE.—Application is to be made to the Board of Trade by the promoters of the Eastbourne Pier Company (limited), to make a provisional order for powers to construct a promenade pier and landing-place, approaches, &c. The pier will commence at a point on the Esplanade opposite Devonshire-place, and extend seaward in a south-easterly direction 1,000 feet or thereabouts.

A NEW BRIDGE OVER THE THAMES.—Notices have been issued, that it is intended in the next session of Parliament to apply for an Act for a new bridge to cross the Thames between the Chelsea Railway Bridge and Fulham. It will be constructed for the transit of carriages, as well as foot-passengers, and will form a communication between Wandsworth and Fulham, from the York-road, on the Surrey side, to Britannia-road, in the Fulham-road, on the Middlesex side. It is intended to form several new roads in conjunction with the bridge.

METROPOLITAN ASSOCIATION OF MEDICAL OFFICERS OF HEALTH.—At a meeting of the members of this society, held on Saturday evening, Dr. Thompson in the chair, discussions were raised upon the subject of Dr. Sylvester's method of restoring the apparently drowned, the prevalence of typhus fever in the metropolis, the new American system of gymnastics, and the effect of artificial respiration. Reports were brought up recommending increased hospital accommodation, and a better supply of water in certain localities; and a resolution was passed expressing an opinion that the existing Nuisance Removal Act was defective.

THE ACADEMY OF THE FINE ARTS, PARIS.—The Académie des Beaux Arts, on Saturday last, proceeded to the election of a foreign corresponding member, in the room of the late Mr. Cockerell. The candidates presented by the committee were Mr. Donaldson, architect, of London; M. Geefs, statuary, of Brussels; Mr. John Pye, engraver, of London; M. Verdi, composer, of Busetto; and M. Stuler, architect, of Berlin. The Academy added the names of M. Gallait, painter, of Brussels; M. Navez, another painter, of the same city; and Baron Marochetti, sculptor, of London. Mr. Donaldson received 18 out of 35 votes, and thus obtained the absolute majority. M. Verdi and M. Navez had 5 votes each; M. Gallait, 4; and Messrs. Geefs, Pye, and Marochetti, 1 each.

TENDERS.

For the erection of villa, for Mr. J. C. Abbott, at Moseley. Mr. F. D. Johnson, architect, Birmingham. Quantities supplied by Mr. John DAVIS:—

Branson & Murray	£1,070 0 0

TO SURVEYORS, ARCHITECTS, AND BUILDERS

A YOUNG MAN, respectably connected, wishes for PERMANENT EMPLOYMENT, in London. He is a good outdoor surveyor and draughtsman, possesses a general knowledge of office work, having been, since the expiration of his articles, engaged four years in the office of a builder.—Address, W. J. care of Mr. Parnell, Stationer, 21, Upper King-street, Bloomsbury, W.C.

TO BUILDERS, CIVIL AND MECHANICAL ENGINEERS.

A THOROUGHLY practical Man, with moderate means at his command, wishes for EMPLOYMENT in a respectable firm, where there might be a chance of purchasing the business, or part, hereafter. He has had eighteen years' experience in the profession, in Government and other works. Can produce good testimonials and references. All communications confidential.—Address, A. Z. Post-office, Stretton, near Rugby.

TO BUILDERS, CONTRACTORS, AND OTHERS.

AS PRIME COST, LEDGER, or GENERAL CLERK.—WANTED, a RE-ENGAGEMENT as above, by a Young Man of thorough business habits. Is a tolerable draughtsman and measurer. Good references. Salary moderate.—Address, A. B. Watson's Library, 1, Omega-terrace, Alpha-road, N.W.

TO ARCHITECTS.

AN efficient CLERK of WORKS, who has just completed the Restoration of a fine old Church under an eminent London architect, desires a RE-ENGAGEMENT.—Address, CHAS. BOND, Post-office, Fordham, Soham, Cambridgeshire.

TO CIVIL ENGINEERS AND SURVEYORS.

AN expert, accurate Surveyor and Leveller desires EMPLOYMENT. He is a neat draughtsman, and has had much experience in the use of the theodolite in making large scale plans of towns for sanitary purposes. Good testimonials, and reference to present employer.—Address, B. H. Office of "The Builder."

AN ARCHITECT'S JUNIOR ASSISTANT desires a RE-ENGAGEMENT. Has had the advantage of several years' practical experience, in addition to the usual routine of office duties. Aged 22. Moderate salary.—Address, J. W. G. 27, King-square, E.C.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 20, Savile row, London, and at the Museum of Practical Geology, Jermyn street, W.
This stone (which is a perfect colite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for sea walls, docks, and for the masonry and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

ABERDEEN POLISHED GRANITE WORKS. Awarded Prize Medal in 1851, Silver Medal in 1855, and Two Prize Medals in 1862.

PATENT INDURATING SOLUTIONS,
For the Preservation of Stone, Cement, &c.;
PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, &c.
FIRE-PROOF VARNISH,
For Internal Wood Work, Roofs, and Church Work generally. This Varnish renders Wood Uninflammable, and Preserves it from Decay.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.
39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.
PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied as readily to soft stone after it is carved that obstruction exists no longer. The Fluo-Silicic stone permanently arrests the decay of all stone.—For further information apply to the Manager of the Company, Mr DUDLEY, Architect, as above.

CHEAP, LIGHT, AND DURABLE ROOFING.
CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.
1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small. 6th. Under slate, metal, or tiles, it is an effectual protection for
INODOROUS FELT, for damp walls and for ceilings, under carpets and floorcloths. Price ONE PENNY per Square Foot.
CROGGON and CO'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.
Samples, testimonials, and full instructions, on application to
CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been using Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whilst we hold to the use of "Hubbuck's Pure Zinc Paint," of the number Two or Three qualities, a workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS. Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT"
THOMAS HUBBUCK & SON,

INTERNATIONAL EXHIBITION, 1862.
CLASS 35, NO. 6849.
The only Medal "for Stone Ware" has been awarded to
DOULTON & WATTS, LAMBETH POTTERY,
LONDON.
In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.
Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

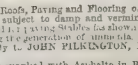
TERRA-COTTA CHIMNEY-TOPS, FIRE-CLAY FLUE-PIPES, RIDGE AND PAVING TILES, &c.

J. TYLOR & SONS' PATENT
REGULATOR WATER-CLOSETS.

Valve.

Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the ball of water, perfect flushing is insured. Any number can be worked by one supply pipe. No intern valves, cranks, or wires required. The Closets can be fixed in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick lane, Newgate-street, London.



TYE & ANDREWS' NEW PATENT SINK TRAP is universally admitted to be the only perfect Trap for Sinks in Domestic Dwellings, as fixed at the principal Institutions. Among others, Wellington Barracks Royal College of Surgeons, &c. &c. Prospectuses on application to the Patentees, TYE & ANDREW, Brixton-road.
SUPPLIED BY ALL LEAD MERCHANTS AND IRONMONGERS

MINTON, HOLLINS, & CO. Stoke-upon-Trent, beg to inform architects, the gentry, and others, that, in consequence of the increasing demand for their Encaustic and Mosaic Pavements, and with the view of facilitating the execution of orders, they have opened an additional show-room, at their Establishment, No. 39, Great Ormond-street, London, where experienced draughtsmen will be constantly in attendance, to afford all information required.
DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, Stoke-upon-Trent.
MINTON & CO. take the present opportunity of stating that they have always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION.
MAGNUS'S ENAMELLED SLATE
obtained the Medal of the Society of Arts, the Prize Medal at the Great Exhibition, 1851. Two First-class Medals at the Paris Exhibition, and Two Prize Medals at the International Exhibition of 1862
Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pumice Slate Works 39 and 40, Upper Belgrave-place, Pimlico, S.W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.
IMPERISHABLE TESSELATED
PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern Book, designed by M. Digby Wyatt, esq., together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, vestibule, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.
May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.
London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES,
PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No. 21, Wharf, Micklefield-street North, City-road Basin, N. Sndly, that the trade term, "TERRO METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Jurors," page 281, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

POLONCEAU and SEYSSEL ASPHALTE.
ESTABLISHED  1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used in paving Stables (as shown above), the absence of joints preventing the generation of ammonia. CURREY, 4, Lancaster-place, Strand, W.C.; or at the Offices of the Society, 18, New Bridge-street, Blackfriars.

EDWARD CHATFIELD, Managing Director.

EXTENSIVE MANUFACTURING

PREMISES, with STEAM POWER.—TO BE LET, one of the finest BUSINESS PREMISES in the City; containing large yard, with drying shed, joinering shop, extensive Workshops, fitted up with circular saws, mortise and tenoning machines for making doors, &c.; three vertical saw frames for cutting deal planks, &c. 26 inches deep; two powerful steam engines, with hot water tank; a well of good water, self acting benches, together with every convenience for a large trade: public and private offices, fitted with fire-proof safes, &c. For further particulars apply at the City Timber Yard, 20, Long-lane, City.

MID-KENT LINE. — Eligible Freehold

BUILDING LAND TO BE LET, on LEASE for 99 years, direct from Freeholders, in a well-situated and healthy part of Kent, commanding beautiful scenery, about ten minutes' walk from the Oxford Bridge Station, Mid-Kent Railway. Railway journey, 2 minutes. Land may be seen, and particulars obtained, by applying on the spot to FREDERICK SELBY, Ravensbourne Park, Lewisham, S.E.

BRICKEARTH, at Southall, near the Grand Junction Canal, and the Great Western Railway. TO BE LET, from Twenty to Fifty Acres of excellent BRICKEARTH, of good depth.—For plans and particulars apply to Mr. RICHARD TRUMPER, 23, Lincoln's-inn-fields, W.C.

WANTED to RENT, PREMISES, containing an area consisting of about 30,000 feet. The building must be of substantial character, fitted for steam power. A good light indispensable, especially in the upper stairs. A space within the circle of about a mile from St. Bride's Church, Fleet street, would be preferred.—Address, with full particulars, to Messrs. JENNINGS & SON, Solicitors, 18, Bennet-court, Doctors' Commons, E.C.

TO ARCHITECTS, BUILDERS, RAILWAY CONTRACTORS, AUCTIONEERS, &c.—SPECIFICATIONS, CONTRACTS, ACCOUNTS, and every other description of DOCUMENTS, correctly and expeditiously COPIED, at 1d per folio of seventy two words, by FRY & SON, Law Stationers, Printers, and Lithographers, 13 & 14, South-square, Gray's-inn, W.C. Plans and drawings copied, enlarged, or reduced, on reasonable terms.

GROUND in BASINGHALL-STREET, now occupied by Houses and Warehouses, known as Nos 20 and 21, Basinghall-street, TO BE LET by TENDER, for Building purposes. A plan of the ground and form of Tender may be obtained at the Office of Messrs. SAWARD & SON, Law Stationers, Frederick's-hill, Cannon-street; or of Messrs. HOLLINGSWORTH, TYERMAN, & GREEN, No 34, Gresham-street, London; where TENDERS, under seal, are to be delivered on or before the 1st DECEMBER next. The Owner does not bind himself to accept the highest or any Tender.

A FREEHOLD MANSION TO BE SOLD or LET for the Hunting Season. The furniture, new and elegant, may be had at a valuation. There are four reception-rooms, two being 50 feet in length, 11 best bed-rooms, stabling for eight horses and four carriages, suitable servants' offices, extensive ornamental grounds, with pinery and greenhouses, in all 28 acres, gravelly soil, near to the Sunningdale Station on the South Western Railway, within half a mile of Windsor Great Park, and 2 miles from the Waterloo station. Apply to J. MAY, Esq., Solicitor, 67, Russell-square, Brighton.

TO BUILDERS & OTHERS.—WANTED, within a mile of Charing Cross, PREMISES or a CARCASE, about 70 feet by 15 feet, and not less than 35 feet high from basement.—Address, by letter, JOHN GEDGE & SON, Patent Office, Wellington-street, Strand.

VAUXHALL GARDENS ESTATE.

Several very Valuable SITES on the above Freehold Estate TO BE LET for Building purposes.—Apply to Messrs. DRIVER & CO Surveyors, Land Agents, and Auctioneers, 4, Whitehall, S.W.

KEYNSHAM BLUE LIAS LIME and CEMENT WORKS, Somerset.—TO BE SOLD, by PRIVATE CONTRACT by order of the Liquidator, the newly erected FREEHOLD WORKS, occupying a site of 7 acres, 2 roods, and 26 perches, or thereabouts. The existing kilns and works are capable of producing 7 to 8 tons of lime, and 120 tons of cement weekly, both products being approved of by large contractors and eminent architects, the cement being used in many of the Government fortifications now in progress. The premises are very substantial and the machinery is of the best description, which can be applied to water power, but with steam-power as auxiliary. Coals are supplied to the works at a very low price, and the Great Western Railway Station is within a short distance.—For further particulars, apply to Messrs. NICHOLLS & SONS, Solicitors, 47A, Moorgate-street; to F. MAYNARD, Esq. Liquidator, 19, Bread-street, Cheapside; and to Messrs. FULLER & HORSEY, 13, Billiter-street, London.

FREEHOLD MILLS, with good Water-power, Keynsham, Somerset, well adapted for Corn Mills, Oil Mills, or Paper Mills, TO BE SOLD.—Apply to Messrs. FULLER & HORSEY, Billiter street, London, E.C.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brick fields of

J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two-fold.

1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 14 per cent of the total make, which in itself more than compensates the cost.

2nd The bricks are so much improved in colour and consistence as to give them a considerable additional value in the market over common stocks.

Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster.

HOLLOW BRICK FIRE-PROOF FLOORS.

BUNNETT'S PATENT.

THIS PATENT FOR SALE, OR LICENSES GRANTED.

Apply to Mr. J. BUNNETT, ENGINEER, DEPTFORD.

BURHAM BRICK, LIME, and CEMENT COMPANY, BURHAM WHARF, BELVIDERE-ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE, GAULT BRICKS, TILES, POTTERY, DRAIN-PIPES, GREY STONE LIME, PORTLAND and other CEMENTS, and BUILDING MATERIALS of all descriptions. Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.

SPRING GROVE BRICKFIELDS,

HOUNSLOW, W. MIDDLESEX.—Mrs. ANN ELIZABETH BURCHETT begs to thank her numerous friends for their patronage received during the last twenty six years, and having DISSOLVED PARTNERSHIP with her son, Mr JAMES BURCHETT, begs again OPENED the above BRICKFIELDS in her own name, where by strict attention to all orders she trusts to receive the same encouragement it hitherto so liberally bestowed upon her. Office—Caswell Cottage, Hounslow-road, Hounslow, W.

December 4th, 1863. A. G. HARRIS, Sec.

BY ORDER of the SECRETARY of STATE for INDIA in COUNCIL.

Notice is hereby given, that TWENTY-FIVE APPOINTMENTS in the UPPER CLASS of the ELECTRIC TELEGRAPH DEPARTMENT in India will, in the year 1864, be open to PUBLIC COMPETITION. A Competitive Examination will, accordingly, be held in this office in the month of MAY next. Full printed particulars of the conditions on which candidates will be admitted to the Examination, and also respecting the nature of the Appointments to be competed for, may be obtained at this Office, on application, either personally or by letter, addressed to the "Under Secretary of State for India," India Office, London, S.W.

1 November 20th, 1863.

ARCHITECTURAL UNION COMPANY (LIMITED).

—In consequence of a sufficient number of Shareholders not being present at the meeting of this Company, advertised to be held on Wednesday, the 2nd instant, notice is hereby given, in conformity with the 39th Section of the Articles of Association, that the said MEETING stands ADJOURNED till WEDNESDAY, the 9th day of DECEMBER at THREE o'clock, p.m. at the premises of the Company, 9, Conduit-street, Hanover-street, when the attendance of the Shareholders is most particularly required, to receive the Directors' Report and Audited Balance-sheet, and to transact the business required to be transacted at the ordinary General Meetings of the Company.

JAMES EDMESTON, Hon Sec

NOTICE.—LONDON and WESTMINSTER BANK, LAMBETH BRANCH, 34, Mount Street—GEORGE TOZER, Local Manager.—The Lords and Westminster Bank having received notice from the Vestry of the Parish of Lambeth, that the Metropolitan Board of Works have directed that Mount Street, Lambeth, should hereafter be called Westminster Bridge Road, and numbered accordingly, hereby give notice, that from and after this date the business of the Lambeth Branch will be carried on at the same premises, but bearing the altered number and name of 91, WESTMINSTER BRIDGE ROAD, S. and all communications connected with that Branch are requested to be so addressed.—By Order of the Board,

WM. EWINGS, General Manager.

1 November 11th, 1863.

MODELLING.—A NEW MODELLING CLASS will be FORMED at the LONDON MECHANICS' INSTITUTION, 29, SOUTHAMPTON BUILDINGS, CHANCERY LANE, under the direction of Mr H HALE, on TUESDAYS and SATURDAYS, at EIGHT p.m. commencing 12th DECEMBER, 1863. Terms per quarter, members of the Institution, 5s. Non members, 8s. Entrance fee to non members, 1s.

TO BUILDERS.—There is no Town in the United Kingdom making more rapid progress in its Trade, Manufactures, and Population than Dundee, on the Estuary of the Tay, north-east coast of Scotland. The manufacture of Jute as a substitute for Cotton has taken fast root in Dundee, and is advancing at a rapid rate, and wealth is being rapidly accumulated. The Farms of Balgay and Logie, now used for Agricultural purposes, are to a large extent within the Municipal Boundaries. Logie lies between the ancient town of Dundee and Lochee, a great manufacturing place, which has arisen within a mile and a half of the High Street, and is now part of the town. All the logie Farm must be Built upon for the Working Classes, and for Manufactories as the trade advances. Building ys to be disposed of for Villas. There are not at present any speculative Builders in Dundee: each man builds his own house for himself. The Proprietors of Balgay and Logie are about to DEAL with Men of Capital and Enterprise, for GIVING OFF in perpetuity large BLOCKS for Annual Rents, along a proposed leading street to pass from Dundee to Lochee.—Application may be made to Mr. SCOTT, Architect, 4, Reform-street, Dundee; or to Mr. C. KERR, Castle-street, Dundee.

SWINEY LECTURES on GEOLOGY, IN CONNEXION WITH THE BRITISH MUSEUM.—A Course of Twelve Lectures on CHEMICAL GEOLOGY will be delivered by Dr PERCY, F.R.S. at the Royal School of Mines, Museum of Practical Geology, Jermyn street, on THURSDAY and SATURDAY in each week, commencing on the 10th instant, at TWELVE o'clock.—Admission gratis.

TRENHAM REEKS, Registrar.

SOCIETY of ARTS.—CANTOR LECTURES.—The following COURSES of LECTURES will be delivered during the session:—

"On the Operation of the existing Laws of Maritime Warfare on International Commerce," by G. W. Hastings, esq.; "On Fine Art applied to Industry," by W. Burges, esq.; "Chemistry applied to the Arts," by Dr. F. Crace Calvert, F.R.S. Mr. Hastings's course, consisting of four lectures, will commence before Christmas, the first, "On the Law of Blockade," will be delivered on MONDAY evening next, the 7th of DECEMBER, at EIGHT o'clock.

These Lectures are free to Members of the Society of Arts, each of whom has also the privilege of admitting two friends to every course. The Wednesday Evening Meetings will be held as usual.—By order of the Council,

P. LE NEVE FOSTER, Secretary.

December 3rd, 1863.

NOTICE to CREDITORS.—In the matter of the Trust Deed or Assignment for the benefit of creditors, executed by GEORGE WHEELER, of West Cowes, in the Isle of Wight, and of Hayes, near Portsmouth, builder and contractor:—Notice is hereby given, that all persons who have any claims or demands against the estate of the above-named GEORGE WHEELER, and have not as yet sent in particulars of their claims or demands, and adjusted and proved the same, are hereby peremptorily required on or before the 21st day of DECEMBER 1863, to send to Mr GEORGE F. MURDOCH, of No 7, Grist street, Portsmouth, Accountant, a full and correct statement of such claims or demands in order that the same may be examined and adjusted, and when so examined and adjusted, to verify and prove the same. And notice is also given, that all persons who have sent in claims, but have not adjusted and proved the same are hereby peremptorily required, on or before the said 21st day of DECEMBER, 1863, to adjust and prove the same, and to send such proof to Mr. GEORGE F. MURDOCH, as above. And notice is further given, that as soon after the said 21st day of DECEMBER, 1863, as the arrangements necessary for the purpose will admit, the trustee will proceed to a third and final dividend, and distribute the assets remaining in their hands amongst the creditors and persons entitled thereto, having regard to the claims and rights of which on the said 21 t day of DECEMBER, 1863, shall have been proved, and that the said trustees will not be liable for the assets so distributed, or any part thereof, to any person whose debt or claim shall not be proved and sent in on or before that day.—Dated the 24th day of November, 1863.

MARSHALL & SON, Hanover-street, Portsea, Solicitors to the Trustees.

ECCLESIASTICAL EMBROIDERY and TAPESTRY for Church Decoration, and VESTMENTS designed and prepared for Ladies' own working, by

RODOLPHIE HELBRONER,

265, REGENT STREET, near the Polytechnic

Gold and silver fabrics, fringes, thread and silk velvets, silks, cloth, linen, and every other requirement for CHURCH NEEDLEWORK.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 79—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for the still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the unexpired term extensive ware-rooms, in the rear of the premises themselves, of all descriptions of hot water, bath, lavatory, and fancy work.

72 74, Bishopsgate street Within, November, 1863.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing they may be introduced more generally in all new Buildings.—For Prices, apply to the Manager, Mr. TYLER, 12, Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

COMPETITIONS.

TO ARCHITECTS.—The Committee for the Erection of a Memorial, in Radnorshire, to the late Sir George Cornewal Lewis, Baronet, have decided that the best form of Memorial will be an Eleanor Cross; but, in the absence of information as to the probable cost, they have determined to invite Architects to send in ARCHITECTURAL DRAWINGS from which the work may be executed with an ESTIMATE of the ELEANOR CROSS, to be erected on the Castle Hill, near Radnor, or on Penglodick, to be erected either on the point of Radnor Forest called Whitnble, Old Radnor Hill, or the Castle Hill; the total cost of erection not to exceed £1000. A space must be appropriated for an Inscription. Perspective drawings will not be submitted for competition. The Drawings and estimate may be sent, or brought to the 20th JANUARY, 1864, to the Honorary Secretary, Mr. R. W. BANKS, Ridgebourne, Kington, Herefordshire who will give any information on, as may be required as to the material for building obtainable in the locality. The drawings of unsuccessful competitors will be returned

BOROUGH of CONGLETON, in the County of Chester.—NEW TOWN HALL.—EXTENSION of TIME.—Notice is hereby given, that the TIME for receiving the plans and designs for the New Town Hall of the Borough, is EXTENDED from the 1st of JANUARY to the 18th of JANUARY, 1864.—By order,

CHRIS MOORHOUSE, Town Clerk.

Town Clerk's Office, Congleton, December 1, 1863.

CONTRACTS.

LONDON DISTRICT.—To BUILDERS and OTHERS.—WAR DEPARTMENT TRIENNIAL CONTRACTS FOR WORKS AND REPAIRS.—The Commissioners Royal Engineer Depot, Lucy's ground, Chatham, hereby give notice that sealed TENDERS will be received at the Wyndham, Pall Mall, Lot box, S.W. on or before 17th DECEMBER, 1863, for WORKS and REPAIRS at the undermentioned Stations from 1st January, 1864, to 31st March, 1867, viz:—

Windsor Cavalry and Infantry Barracks, and Builders' Fort.

Schedules and Printed Forms of Tender, prescribed by Act, and all necessary information may be obtained on application at the Royal Engineer Office, 11, James street, Buckingham Gate, London, S.W. from 9th to 15th December, 1863, inclusive, from 11 A.M. to 3 P.M.

The Secretary of State reserves to himself the right of accepting the whole or any of the Tenders

Royal Engineer Office, London District, 11, James-street, Buckingham Gate, S.W. 27th November, 1863.

METROPOLITAN BOARD of WORKS.

THAMES EMBANKMENT, MIDDLESEX SIDE.—To BUILDERS, CONTRACTORS, and OTHERS.—EXTENSION of TIME for RECEIVING TENDERS.—The Metropolitan Board of Works, hereby give notice, that they have EXTENDED the PERIOD for receiving TENDERS for the above Works from THURSDAY, the 26th day of NOVEMBER instant, until THURSDAY, the 17th day of DECEMBER next. The WORKS to be CONTRACTED for are the CONSTRUCTION, COMPLETING, and MAINTAINING in REPAIR for Twelve calendar months, the following WORKS, that is to say, the Embankment Wall, 1,200 feet in length, or thereabouts, with certain Landing-places, Steamboat-pier, Sewers, Subway, Storm outfalls, and other works in connexion therewith, situate in and adjacent to the foreshore of the River Thames, on the Middlesex side, between Waterloo Bridge and the eastern end of the Temple gardens. Parties desiring to submit Tenders may, on and after SATURDAY, the 28th NOVEMBER instant, upon payment of 10s. 10s. obtain plans, sections, specifications, forms of Tender, and other particulars on application to Mr. J. W. BAZALGETTE, Engineer of the Board, at the Office, Spring-gardens, between the hours of NINE a.m. and FOUR p.m. or on Saturdays between the hours of NINE a.m. and TWO p.m. until THURSDAY, the 17th day of DECEMBER next. The Tenders are to be addressed to the Clerk of the Board, and must be delivered at this Office before one o'clock on the last mentioned day, and no Tender will be received after that hour. No Tenders will be opened in the meeting of the Board, to be held on FRIDAY, the 18th DECEMBER and the parties Tendering must be in attendance at the Board at TWELVE o'clock on that day. The Board do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two or more approved sureties for the due and satisfactory performance of the works.

JOHN POLLARD, Clerk of the Board.

Spring gardens, S.W. November 24, 1863.

CITY of LONDON FREEHOLD LAND TO BE SOLD by TENDER to PUBLIC COMPANIES, BANKERS, HOTEL BUILDERS, CAPITALISTS, and OTHERS.—TO BE SOLD by TENDER, a FREEHOLD PLOT of LAND, with the Buildings thereon, containing about 4 360 square feet, situate in Leadenhall street, directly opposite the new and handsome range now erecting on the site of the late East-India House. On part of the Premises the business of a Tavern is being carried on, and the purchaser will be required to take the Business and License in the usual way.—Printed forms of Tender, which are to be delivered at the Office of Messrs DRIVER & SONS, 20, Bedford-square, City, and are to be delivered at their Office as aforesaid, by TWO o'clock in the afternoon of the 8th day of DECEMBER, 1863.

TORQUAY HOTEL COMPANY (Limited).

TO BUILDERS.—The Directors of the Torquay Hotel Company (Limited) are willing to receive TENDERS for an HOTEL to be erected at "The Cove," Torquay, from the Designs of Mr. ALFRED N. CLIFTON, 17, St. Helen's place, Bishopsgate street, London. Copies of the quantities may be obtained of Messrs WILLIAMS & SHEFFIELD, 12, Bishopsgate-street, Without, London, W.C. upon depositing with them the sum of five guineas, which will be returned after the delivery of the Tenders. The Directors do not bind themselves to accept the lowest tender. The Tenders will require the latter whose tender is accepted to give the names of two sureties, to be bound jointly with the latter, in the sum of three thousand pounds, for the due execution of the works.—By order of the Board,

A. N. CLIFTON, Architect of the Company.

17, St. Helen's place, Bishopsgate street, London,

7th October, 1863.

For remainder of Contracts see next Page.

CONTRACTS.

TO SEWER CONTRACTORS.—The Vestry of the Parish of Bethnal Green will meet at the Town Hall, Church-row, Bethnal-green road, on WEDNESDAY, the 3rd day of DECEMBER next, at ELEVEN o'clock in the forenoon precisely, to receive TENDERS and CONTRACT for the CONSTRUCTION of a certain BRICK SEWER, and LAYING DOWN IRON and GLAZED STONEWARE PIPE SEWERS, with the work thereout connected, according to plans and specification, which may be seen at the Office of the Surveyor, Town Hall, aforesaid, where further particulars may be obtained. Tenders on the Vestry's printed forms, sealed, and endorsed "Sewers," must be delivered to the Surveyor by or before TWELVE o'clock on WEDNESDAY, the 9th of DECEMBER next. The Vestry reserve to themselves the right to accept any or no tender to be taken.

ROBERT VOSS, Vestry Clerk.

Vestry Offices, the Town Hall, Church-row, Bethnal-green road, November 25, 1863.

EXCAVATORS and RUBBISH CARTERS are invited to TENDER for the REMOVAL of Spoil and RUBBISH, from Golden-lane, St. Luke's. — Address Tenders, to BUILDER 82, Wood-street, Cheapside

ST. BARTHOLOMEW'S CHURCH. SCAMMONDEN BRIDGE-ROAD.—Plans and Specifications for REBUILDING the above CHURCH may be inspected at my Office, in Queen street, Huddersfield, on and after the 9th inst.

E. WYNDHAM TARN, Architect

10, Guildford street, Russell square, W.C. Nov. 3.

PETERBOROUGH UNION. To ARCHITECTS and BUILDERS.—The Guardians of the Peterborough Union hereby give Notice, that they intend to build a PAUPER and SICK HOUSE, with Kitchen, and other requisite Buildings, to accommodate 250 persons. Plans, Elevations, and Specifications, of the proposed Building, with the estimated cost, must be sent (free of expense) on or before FRIDAY, the 1st of JANUARY next, addressed to me, the undersigned, and endorsed, "Pauper-house Plans," after which no Plan will be received. The Guardians do not pledge themselves to accept any of the designs given, or pay the expenses of their preparation, and those not accepted will be returned.—By the Board,

S. C. W. BUCKLE, Clerk to the Guardians.

Peterborough, 23rd November, 1863.

MIDLAND RAILWAY.—The Directors are prepared to receive TENDERS for the ERECTION of STABLES for FIFTY HORSES (LOOSE BOXES), at the Lawley street Station, in Birmingham. Plans and Specifications of the same may be inspected, and Forms of Tender obtained, at the Company's Engineer's Office, Victoria Station, Pimlico, S.W. Tenders must be delivered on or before the 14th instant.

(Signed) W. E. J. BINSON, Secretary.

TO CONTRACTORS and IRON-FOUNDERS.—The Directors of the Ludlow Race Course (Limited) are prepared to receive TENDERS for the CONSTRUCTION of an IRON LANDING and PROMENADE PIER at Ludlow, in the County of Salop. Plans and Specifications for the same may be seen at the Office of the Company, 2, Parliament-street, Westminster, S.W., on the 8th day of DECEMBER next, and two following days, and at the Office of the Company in Ludlow on the 2nd and 3rd days of December next, at which Offices Tenders must be delivered on or before WEDNESDAY, the 9th of DECEMBER next, addressed to the Chairman of Directors, Ludlow Race Course Limited, Ludlow, and endorsed "Tender for Pier and Landing Stage." The Directors do not bind themselves to accept the lowest or any Tender.

Ludlow, November 20, 1863. C. N. BROWN, Secretary.

LONDON, CHATHAM, and DOVER RAILWAY.—The Directors of the London, Chatham, and Dover Railway are prepared to receive TENDERS for the ERECTION of a BRICK and CAST-IRON GIRDER BRIDGE over the Railway in the parish of River, near Dover. A copy of the drawing, specification, and Form of Tender may be seen, and Specification obtained, at the Office of the Company's Engineer, Victoria Station, Pimlico, S.W. Tenders must be delivered on or before the 14th instant.

(Signed) W. E. J. BINSON, Secretary.

TO CONTRACTORS and IRON-FOUNDERS.—The Directors of the Ludlow Race Course (Limited) are prepared to receive TENDERS for the CONSTRUCTION of an IRON LANDING and PROMENADE PIER at Ludlow, in the County of Salop. Plans and Specifications for the same may be seen at the Office of the Company, 2, Parliament-street, Westminster, S.W., on the 8th day of DECEMBER next, and two following days, and at the Office of the Company in Ludlow on the 2nd and 3rd days of December next, at which Offices Tenders must be delivered on or before WEDNESDAY, the 9th of DECEMBER next, addressed to the Chairman of Directors, Ludlow Race Course Limited, Ludlow, and endorsed "Tender for Pier and Landing Stage." The Directors do not undertake the responsibility of furnishing the particulars of the work about to be taken, the Directors not binding themselves to accept the lowest or any tender.

Ludlow, November 20, 1863.

CITY of GLOUCESTER.—GLOUCESTER WATER WORKS.—ROBINS WOOD HILL RESERVOIRS.—The Gloucester Board of Health are prepared to receive TENDERS for the REPAIRATION of the RESERVOIRS at ROBINS WOOD HILL, about two miles from Gloucester, including the Hearth-stone and Puddling of a portion of the Banks, and the construction of certain Manholes and Culverts, and the execution of other works connected with such Reservoirs.—Plans, Specifications, and Quantities may be seen at the Office of Mr. MANSERGH, C.E., Engineer to the Local Board, Corn Exchange, Gloucester, for the purpose of giving estimates as to the probable Tenders, and at the Reservoirs, at Robins Wood Hill, on MONDAY, DECEMBER 7th, at ELEVEN o'clock a.m. Forms of Tender, and a schedule of prices may be had on application to the Engineer as aforesaid (to whom all the Estimates are required to be sent in proper form). Tenders, with the names of two sureties, to be sent to Mr. K. H. FRYER, Clerk to the Local Board, Gloucester, under cover, endorsed "Tender for Works at Robin's Wood Hill," on or before the 10th of DECEMBER. The Board do not pledge themselves to accept the lowest or any tender.

November 27th, 1863.

TO ENGINEERS.—The Docks and Camber Committee of the Town Council of the Borough of Portsmouth are prepared to receive TENDERS for providing and fixing a SIX-HORSE AUXILIARY ENGINE for pumping out the leakage of the Dock. Plans and Specifications may be seen at my Office, Guildhall Chambers, Portsmouth, at which place Tenders are to be delivered on or before the 14th DECEMBER next.

JOHN HOWARD, Town Clerk.

Portsmouth, November 20, 1863.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862

ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PAINTED LINES made from Jute, which are both weak and rotten. The STRENGTH and DURABILITY of Flax, consequently cannot give so much trouble and annoyance to the consumer.

They can be had of most of all Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

NAILS and IRONMONGERY from BIRMINGHAM direct,

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES,

Portable, Foundry, Forge, Wharf, Quarry, Warehouse, and other descriptions of Cranes; also Steam Winches and Cranes (on the Derrick principle). Water Companies and others can also be supplied with our Improved Sluice Valves.—For further particulars apply to BOWER & CAMERON, Makers, Stringfield Iron Works, M'Neil street, Glasgow.

WANTED, CONTRACTORS' RAILS.—About Thirty Tons required: 36 lb. to the yard preferred.—A Price, stating proposed Locations, to PICTOR & SONS, Stone Merchants and Quarry-men, Box, near Chippenham.

SMOKY CHIMNEYS.

S. DEACON

Respectfully invites the attention of Architects, Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success in most vexing chimneys where other caps have been tried in vain.

The advantages attending this Cap are—it can be adjusted by a child by the machine when the chimney is heated, the smoke being able to pass through the Cap without the liability of inflammable soot, and ceases up current, and the impediment to draught is taken away.

Prospectus forwarded on receipt of Postage stamp, by

S. DEACON,

59, ALMA STREET, HOXTON, N.

MANUFACTORY:
HEMSWORTH STREET, SAINT JOHN'S ROAD, HOXTON, N.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

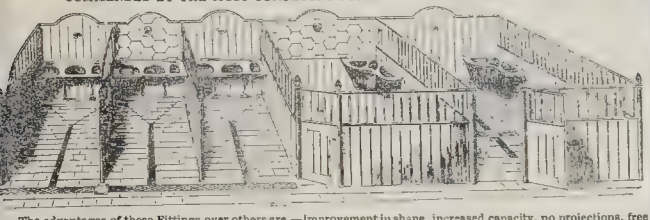
THE PRIZE MEDALS

(LONDON, 1851. PARIS, 1855. LONDON, 1862)

Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.



For progressive and general improvements in

STABLE FITTINGS AND HARNESS BRACKETS.

PATENTEES AND ORIGINAL INVENTORS OF

THE IMPROVED SYSTEM OF STABLE AND HARNESS FITTINGS,

COMMENDED BY THE MOST COMPETENT JUDGES IN THE UNITED KINGDOM.

The advantages of these Fittings over others are,—Improvement in shape, increased capacity, no projections, free ventilation, preventing foulness in the rack, facility in fixing, safety from accident, durability in construction, and cleanliness in use.

STALL-FITTINGS TO ANY WIDTH OF IRON ENAMELLED, OR GALVANIZED IRON.

COTTAM & CO. exhibit for inspection at their Iron Works, 2, Winsley-street, W. an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.

ILLUSTRATED CATALOGUES FREE, on application to

COTTAM & CO., No. 2, WINSLEY-STREET, OXFORD-STREET, W.

COTTAM & CO.'s ONLY ADDRESS IN LONDON IS 2, WINSLEY-STREET, W.

MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under directions of London Architects, noted for adopting only what is the best of its kind. Particulars of these, as well as of

MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE,

will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

BROWN & GREEN'S

PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept 6, 1862.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862. AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is the entire new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top bars a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A very perfect unity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of side by side; and the ROASTER is constantly replenished with fresh air."

INVENTORS AND MANUFACTURERS,

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR

DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.
Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.
Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this assistant is thoroughly attended to, and at no extra cost.
This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,

Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any ordered or circular work, waggon headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made, it has been used under the direction of Owen Jones, Esq., for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.
DESIGNS MADE FOR ANY WORKS.
LITHOGRAPHED DESIGNS OF CEILING FLOWERS, &c. SENT FREE ON APPLICATION.

FIRST-CLASS MEDAL,
EXPOSITION UNIVERSELLE,
1855.

PRIZE MEDAL—Class X. (c)

CARTON PIERRE AND PAPIER MACHE WORKS, 49, RATHBONE PLACE, LONDON, W.

(Established in 1780.)

The Builder.

VOL. XXI.—No. 1087.

"Going Along." More of Venice.

ORE? Ay, much more if we had but our own will to consult. Venice is a place to talk of for ever, and would be a place to live in, too, if Italy had but its own again, and the Venetians, relieved from thraldom and made easy in their minds, would set themselves to cleanse the canals and pass such laws as would prevent the autumnal foulness and consequent evil smells and sickness. Art and science are under a dead weight here. Take that off and they will spring up rejuvenescent to emulate their own achievements in earlier times. Glorious sons had Venice in those days; equally glorious descendants may she have again, if fair play be given her. Her best children, ill developed, now run away from her as fast as opportunities occur, and settle where they may use their abilities with something like freedom, and obtain a proper reward for their labours.

The exhibition of modern works open at the *Accademia di Belle Arti* afforded an illustration of this. The works of the students showed good academic drilling, considerable power,—so far: but the after-results of such drilling were wanting in the rooms below, where were collected the works sent by the elder men for exhibition. These, for the most part, were weak and feeble; and for such as had merit it was complained there were no buyers. The works for sale were 139 in number, including a few busts, vases, models, and copies. Two or three landscapes by Luigi Querena, Giuseppe Holzer, and Professor F. Moja, and half a dozen *genre* pictures by Guglielmo Stella, Cesare dell' Acqua, and Giulio Carlini, were all that called for praise. Some remarkably fine copies by Prodocomi of the illuminations in the Grimani breviary, however, placed in another part of the structure, should not pass unnoticed.

Seen in connexion with the fine works, especially of the Venetian school, to be found in the building and open to the public every day, these modern efforts seemed puny indeed. The Venetians claim to have had an academy as far back as 1670; but the academy on its present footing, and the present collections there, do not date farther back than 1807. In connexion with the original building, we get the name of Palladio, and with the later arrangement that of Cicognara, whose large work on Venice all our readers ought to know. The collections are several in number; the Pinacoteca dell' Accademia, the Pinacoteca Contarini, and the Pinacoteca Renier; and these being kept distinct, order and sequence in the arrangement of the pictures are sacrificed. The chief glory of the collections is the Assumption, signed *Ticianus*, a grand and wonderful work. Speaking of this picture, Mrs. Jameson once said to us the effect of it on her was "like music;" but this was not full praise. Never can music give the precise expression and evoke the same amount of feeling this picture is capable of doing. Browning sings:—

> "There is a vision in the heart of each,
> Of justice, mercy, wisdom, tenderness
> To wrong and pain, and knowledge of their cure;
> And these embodied in a woman's form,
> That best transmits them pure as first received
> From God above her to mankind below"

This picture gives expression to the dream of many.

Of the same great master there are the earliest work, the Visitation of Elizabeth, and his last when he was an old, old man, the Deposition of Christ, finished by the elder Palma. These are very interesting as matters of history, but as it seems to us, only in that point of view. Lovers of Tintoretto may revel here: and amongst many fine canvasses by Paulo Veronese is his large work, the Supper in the House of Levi, more than 40 feet long and about 20 feet in height, one of the grand series of Scriptural banqueting scenes painted by him, and now scattered over Europe. There are several large pictures by Vittore Carpaccio, full of small figures, illustrating the life of St. Ursula, that deserve notice. In one, a prince of England (?) who has asked her in marriage of her father, il re Mauro, is kneeling, dressed in red damask; his face and hands are admirably painted. Some exquisite Madonnas by Gian Bellini; a picture by Antonello da Messina, who learned from Van Eyck the secret of the use of oil colours, and *from* whom, according to a story we do *not* believe, Gian Bellini stole it; two curious costume pictures by Gentile Bellini and works by Martin da Udine, Paolo di Credi, Giorgione, Bonifacio, Vicentino, and others, are amongst the riches and curiosities of the collection. In one room is preserved the good right-hand of Canova, his chisel being suspended from the wall above it, and in every apartment there is something that will detain the real lover of art.

On the same side of the canal with the Academy, stands the church of Santa Maria della Salute, built as if to form a picture, with the Dogana and its gilded globe, borne by Atlas, and the church of S. Giorgio Maggiore, for Venice to look at, and all artists to paint. The church of Santa Maria, a bold octagon, designed by B. Longhena, was built by direction of the Senate, in thankfulness that the plague had ceased;—"*Unde Origo, unde Salus*, 1631." It stands like the rest of Venice, on thousands of piles, driven in to form a bottom for it. A marble group at the high altar represents Venice praying to be relieved from the pest, which an angel is chasing away; St. Mark and St. Lorenzo take part. The octagon nave, round which an aisle continues, has a marble pavement; and there are some fine paintings in the church by Titian and other masters. Here lie the remains of the architect Sansovino. The exterior of S. Giorgio Maggiore, nearly opposite to the Ducal Palace, one of Palladio's most celebrated churches, cannot be called handsome. The interior, though the upper part is bare and poor, is much finer. The proportions are admirable, and the manner in which the ancient forms are adapted to modern wants, is skilful in the highest degree. Pictures by Tintoretto and others, and bronzes by Girolomo Campagna, call for admiration. The wood-carvings behind the high altar, by Alberto de Brule, 1598, though much praised, are simply good upholstery work.

The finest Gothic church in Venice, excepting the Frari, is that dedicated to SS. Giovanni e Paolo, ascribed to one of the Pisani, and which is now being restored under the architect, Signor Biondetti, with marble and terra cotta. There are some very bad settlements in the north transept, and the columns are driven over at the top. The chapels at the east end also need and are having attention. There are some curious bronze reliefs by Moza, of Bologna, fixed against the wall of a chapel at the east end. These illustrate the life of St. Dominic. The monument of the Doge Andrea Vendramini, 1478, is a remarkably beautiful specimen of *quattro-cento* enrichment. The figures are not so fine, though some of them are good. The church contains a wonderful assemblage of monuments of both the Pointed and the Renaissance period, including numerous statues. And as to the pictures there, we need only mention St. Peter Martyr, by Titian, and a fine Madonna and Saints, by Gian Bellini, to show that it is a shrine for all art-loving pilgrims. The Chapel of the Rosary has some wood-carving, coarse, but in parts powerful, by Brustolo. Everywhere in Italy, by the way, the artist's name is prominent on his work. In this chapel, too, there is a series of groups in relief illustrating the life of the Virgin, signed Aloysius Fagliapietra, or by his son Charles (with the exception of three), and of great beauty. The exceptions are much less good, and of these only we were sorry to find an artist making careful drawings for one of our compatriots,—a man of Manchester. What could have regulated the selection?

The Civil Hospital, near this church, is part of a richly adorned fifteenth century building, by Martino Lombardo, a member of a family of architects belonging to Venice. One of them, Sante Lombardo, designed the Scuola di San Rocco, with its fine staircase, of which we have already talked. He also built the beautiful Vendramini Palace, and others. The façade of the hospital has a spotty effect, from the variety of material used, coloured marbles and so forth being differently affected by time. The upper part shows considerable invention. Below, there is a curious imitation in marble of piers and arches in perspective, with lions and figures under them,—a horribly poor conceit.

Venice is a wonderful place for the study of domestic architecture. Some other cities have each a dozen or a couple of dozen of good specimens; but here the whole of the watery road is lined with them,—Byzantine, Gothic, and of the Renaissance,—mostly in a neglected state, many of them miserably out of repair, but all sufficiently perfect to show their peculiarities and their beauties. One noticeable and disappointing fact is the constant repetition made in the earlier Venetian buildings of a morsel of the well-known arcade of the Doge's palace. This occurs over and over again, a little varied in one or two instances, but for the most part simple repetition. Our own "Venetian Gothic" men, we must observe, find it very difficult to put together a façade without it. The balconies, the angle windows, little bits here and there in every direction, offer themselves for admiration, but are all now so well known as to need no introduction. Touching the Ducal Palace, by the way, we would relieve some of our general readers from a prevalent belief that they are bound to admire every stone of it. The top story has little about it to call for admiration; it must surely have been the work of a later hand, and as to the Strawberry Hill parapet that crowns it, visitors may be held excused if they say it is a very trumpery affair, quite unworthy of the greater part of the two lower stories of the building, the beauty and nobleness of which will be evident to all who have learnt to see.

And now, first taking another long look at the glorious *ensemble* here, turn the gondola up one of the narrow cuts that open out on the other side of the city, and pay a visit to the island of Murano.

At a very early date, the manufacture of glass it will be remembered, was specially cultivated by the Government of Venice. It was an art it

regarded as the apple of its eye ("*qual pupilla degli occhi suoi*"); and the products were purchased in all parts of the world, and brought in large revenues. In the thirteenth century the number of glass houses in Venice was so great that the city was constantly exposed to the danger of fires; and in 1291 a decree was passed ordering their demolition. Murano was chosen for their new site: in a short time the island was covered with glass-houses, and here the manufacture was carried on for long years. The glass-makers were invested with great privileges, and to some extent ennobled. Their glass jewelry, coloured beads, enamelled vases, and filagree ornaments, were sought for by all Europe for some hundreds of years. In the eighteenth century, however, the trade took a new course, the glass of other countries came into fashion, and when the Venetian Republic fell, Murano lost its place, and has not regained it. Sadly desolate is it now, and its churches strikingly exhibit the decay. The cathedral, or Church of San Donato,—a well-known and very interesting building, dating probably from the eleventh century,—is in a miserable state; so bad, indeed, that the interior has been filled with scaffolding, and men have been set to work to repair it. Originally it must have been richly ornamented within and without. The eastern apse, arcaded externally, has lost its facing of stone and marble. The bare brickwork remains exposed, with small pieces of early carved stonework, birds and grapes, and interlacings here and there. The apse within is covered with mosaics, presenting on a gold ground a long figure of the Virgin, of Byzantine type, with blue dress, all cut into and spoilt. Behind the altar there is a carved representation of the patron, with the inscription, "*Corpus Sancti Donati Epi. Muriani protectoris.*" The mosaic pavements in the church are most interesting. The patterns include the conventional two peacocks, eating out of a vase, and it is dated 1140. This work is second only to that in St. Mark's, and, in some respects, is perhaps superior to it. It has been miserably damaged; but time has not paled it so much as it has some of our modern mosaic pavements not twenty years old.

The church of S. Pietro, not far from the cathedral, is the picture of desolation. There are some clever wood-carvings in the sacristy, by Pietro Murano, in a very bad condition, and evidently little cared for, as a nail is driven into one of the figures to hang a towel on!

The Island of Torcello is farther off: the journey to it from Venice occupies the gondoliers nearly two hours. Passing up a little inlet of the island, through gardens of vines and shining pomegranates, the parent Basilica of Venice is soon found, a building more time-bleached, solitary, and deserted than that of Murano, or than any we can elsewhere remember. Pause awhile to view its singularly beautiful arcade at the west end, then enter the building again to experience a strange and absorbing sense of solitude. There is plenty to admire, nevertheless. Anything more exquisite than the series of capitals to the internal arcade of this building, it is almost impossible to conceive. But all other feelings at Torcello sink into one of melancholy at the sight of its noble mosaic at the west end. This invaluable example of early work, a "Last Judgment," is now literally bulging and crumbling from its wall—not from any inherent decay, but from the criminal apathy of the Austrian Government. It appears, that some four years since a mosaicist was commanded to restore the work—a process which he understood, as restorers are wont, to be best accomplished by ripping off the old mosaic by wholesale, and substituting his modern antique in its place. The result was, as may be guessed, impending ruin of perhaps the whole. But the Government, discovering that the process was taking a felonious form, since the ancient work, sound as well as time-worn, was being purloined, stopped the business, and, we believe, incarcerated the artist. From that day to this the mosaic has remained untouched. There stands the mosaicist's scaffold, and some of his tools, just as he left them. Unfortunately, too, the mosaic itself is as he left it—that is, bulging, tattered, falling, and threatening destruction. The absence of further care in the matter by those in authority is ascribed to the absorption of the Government money in gigantic military expenses. Thus the Government takes care that Venice shall be overrun with what the Venetians call the real mosquitoes of the place, and declines to spend a few pounds for the conservation of one of its most interesting monuments.

Poor Venice! Beautiful Venice!!

ARCHITECTURE AND THE ROYAL ACADEMY.*

The questions belonging to architecture, raised during the proceedings of the Commission on the Royal Academy, but some of them so strangely left unnoticed in the Report, concern too nearly the interests of the public, as well as tastes of the profession, to be dismissed by us in a single article. The Commission attribute that "bad taste and utter want of system" in public buildings, of which, as we have said, they recognize that there has been "*well-founded* complaint," to the dependance "too much on the rapid succession of the several politicians who have filled the office of First Commissioner of Public Works, and on the conflicting votes, which according to their recommendations, have been passed by the House of Commons." And they think that the Royal Academy, constituted as they propose,—namely, of fifty professional and ten non-professional Academicians, and fifty Associates, members jointly with the Academicians of the general assembly, the whole presided over by the best man of the Academicians, *professional*, it would appear, and of whichsoever branch of art,—would form "a valuable permanent council of advice and reference in all matters relating to the fine arts, public monuments and buildings," whilst that the successive advisers of the crown, instead of feeling jealousy, would welcome the advice with pleasure as relieving them from embarrassment. We may infer that the new constitution would admit of about eight architect-academicians. There are now three: but there is an architect associate; and at the date of the list which is given as "Appendix No. 4," the late Mr. Cockerell additionally was an "honorary retired Academician."

But though, on the actual management of public works, the Commission express an opinion which has our complete adhesion, we are not satisfied with their utter neglect, in their Report, of the question of the recruitment of the talent upon the existence of which, in the profession, the growth and future maintenance of an art-element in the works would depend, no less than upon the happy selection of a small number of the body of judges, qualified in their special pursuit, and competent to explain their views to the painters, sculptors, and amateurs who would form the majority. Taking the general *status* of education and talent in the profession as not likely to fall below the present standard, it must not be forgotten, that many of the defects of the *system*, or "want of system," before mentioned, are observable in ill-digested plans, and in the extravagance resulting from changes of intention, and pulling down and rebuilding, rather than immediately, in matters of art of which painters and sculptors could be cognizant. The errors are the means of wasting large sums that might otherwise be spent on art; and, under a proper system, not a street should be formed, or bridge built, or building erected, without the recognition of art as a requisite in the work. But we are inclined to think that our own profession,—could the public be suffused with a sense of the importance of the art-element in all buildings, and could the profession when so favoured, acquire the appreciation and capability for sculpture, or sculpture and painting,—would offer, or representatives of it, advice that would tend more to the amelioration of the art which is displayed in buildings, than would the advice to be furnished by a body in which much of what is architecture would be assumed to have no place, and in which the art-architectural, however viewed, would be in a position extremely contrasting with its actual importance. This is not saying that the profession should lose *prestige* that it has through connexion with the Academy, or not gladly see itself represented more largely there, and instruction in the drawing and modelling of the figure communicated to architectural students.

It may be interesting here to collect from the different lists, the statistics of the representation of architecture in the Academy since the foundation in 1768. Since that time, or to some period in the first half of this year, there have been in all, 156 Academicians, or painters, sculptors, architects, and engravers. We find by a simple calculation, that there were 74 associates who did not reach the honours of the higher grade. Out of the 156 Academicians, the names of seventeen are those of professional architects. The names, with the dates of election, are Thomas Sandby, William Chambers, John Gwynn, William Tyler, and George Dance, who were of the original nomination by George III.; James Wyatt (associate 1770), 1785; John Yenn (associate 1774), 1791; John Soane (associate 1795), 1802; Sir Robert Smirke (associate 1808), 1811; Jeffrey Wyatville (associate 1822, as Jeffrey Wyatt), 1824; William Wilkins (associate 1823), 1826; Charles Robert Cockerell (associate 1829), 1836; John Peter Deering (associate, as J. P. Gandy, 1826), 1838; Philip Hardwick (associate 1839), 1841; Charles Barry (associate 1840), 1842; Sydney Smirke (associate 1847), 1859; and George Gilbert Scott (associate 1855), 1860. The names of architects amongst the seventy-four associates are Edward Stevens, elected associate, 1770; J. Bonomi, 1789; Joshua Gandy, 1803; and Edward M. Barry, 1861. Chambers, Soane, Wyatville, and Charles Barry, who were knighted, seem to have received the dignity each at some date subsequent to their election as Academicians. An architect has not filled the presidency except once, and then only exceptionally for a single year. In 1805, James Wyatt was elected to the office in place of Benjamin West; but West was re-elected in 1806. The five names of presidents, excluding Wyatt, since the foundation, all are those of painters; and the four secretaries' names belong to the same branch of art. The keeper, as well as the librarian, has always been either a painter, or an artist in some walk of sculpture. The treasurer, however, having the care of the apartments or building, has always been an architect. The names are Sir William Chambers, 1769; John Yenn, 1796; Sir Robert Smirke, 1820; Philip Hardwick, 1850; and Sydney Smirke, 1861. The professors of architecture have been Thomas Sandby, 1768; George Dance, 1798; Sir John Soane, 1806; William Wilkins, 1837; C. R. Cockerell, 1839; and Sydney Smirke, 1860: but others may have lectured; at least Mr. Scott has. The professorship of perspective has never been filled by an architect; which is perhaps the reason that painters exhibit so much inability in that requisite of their art. It is, however, right to say that the number of lectures or lessons in the perspective course, has always greatly exceeded the number six, as in each of the other courses, painting, sculpture, architecture, and anatomy. The course of the present teacher of perspective is forty lessons. That is thirty-nine more than many architects have received, who have become accomplished draughtsmen; the reason of the great success of the architects, with less apparent study, being probably to be discovered in the fact that with them, the drawing of objects as they appear, is acquired and practised along with and by the aid of geometrical drawing, or the method of representing objects as they are.

The recommendations of the Commission would go to effect a considerable improvement upon this position of architecture in the Academy. An architect might be elected president, as in the case of most of the foreign academies. Certainly we can have no hope for the beneficial influence of the Academy over public works, or for the progress of sculpture and the correction of the present defects of our "public statues," or for the production of works of the first class in painting, till architecture is understood and appreciated by painters and sculptors, and placed on no inferior rank to their arts.

The machinery for the education of architects, is comprised in the lectures,—which are six on architecture annually, though subject to interruption on changes of the professor,—the opportunity presented of using the library on one day and three evenings in the week, and that of making one or two drawings from measurements of buildings, and other drawings "exemplifying the principles of scinography," and designs to prescribed subjects, in competition for medals. With

* See page 804, *ante*.

this however is included the opportunity of gaining the "travelling studentship," or occasionally a scholarship to the amount of 25*l.* for one year, but renewable by the council for a second year. The Appendix (No. 13), giving "Extracts from the Laws relating to the Schools, &c.," is not clear without Sir Charles Eastlake's evidence: but the gold medals are offered once in two years; whilst silver medals are offered every year. The gold medal to architects, with the Discourses of Reynolds, and other books, is offered "for the best-finished design in architecture" to a determined subject, shown in plans, an elevation, a section, and a perspective view. The scholarship may be offered added to the offer of the medal; but is not tenable together with the travelling studentship. The travelling student is eligible in each class, painting, sculpture, and architecture in rotation, from among those who have obtained gold medals. The allowance is 100*l.* annually during two years, and 60*l.* for the journey and return. But according to the same Section, 5, relating to "Travelling Studentships," of the Laws, "a travelling studentship for one year, with an allowance of 100*l.*," further, is to "be annually offered to all students in architecture, except during the term allotted to the gold medal student in architecture," candidates being "allowed a limited time to produce, in the Academy, an original design" to a prescribed subject. This annual travelling studentship for architects,—additional to the other for two years, which is taken in turn between the three classes,—comes into effect this year; and it is a concession to the claims of our art, for which we would award the Academy great praise. The silver medals to architects are offered for the best accurately-figured drawings from given subjects, the measurements being made by the students, for the best perspective drawing in outline, and for the best drawing exemplifying the principles of sciography.

There is considerable difference of opinion amongst the painters, on numerous points of the question of the utility of foreign travel. Several of them express reasonable doubt whether lengthy sojourn in Rome is desirable as a feature in the training for their branch of art. But they would speak unhesitatingly as to the advantage to architects, of such a residence as the five years in Rome, of the students who have gained the prize of the French Academy; and they appear to be backed by the sculptors. The list of nations maintaining pensioned students in Rome, given in a letter by Mr. Gibson, referred to by Sir Charles Eastlake, as quoted by Earl Stanhope, in 1860, in the House of Lords, was originally put forward as inducement to the English Government,—spending, in the words of the writer of the letter, "large sums to erect public monuments,"—to follow example, and contribute something "towards the training of their students," so as "in the course of time to have public monuments that would be an honour to the nation." But there is error in the following otherwise very noteworthy passage in the examination of Sir Charles Eastlake. The chairman is questioner.

"518. I have spoken hitherto of sculpture and of painting, but Mr Gibson has also intimated his opinion that the same system of studentships at Rome would be highly advantageous as regards architecture, and that study at Rome would tend to elevate and refine the style and taste to be exhibited in public buildings: are you of the same opinion?—I have not a doubt of it. I think that the system adopted by the French Government with regard to architects sent to Rome is most judicious. They are always required to restore some antique building, the practice has been going on so long that French students in architecture who now go to Rome are almost at a loss to find a building which has not been restored. The collections of drawings, which must by this time be accumulated in Paris, of that description, must be extremely valuable."

The system referred to by Sir Charles, as he would on consideration see, is, or was, not quite so judicious as he has represented it. We say "*was*;" for, we shall have an opportunity of stating that the system has already received some modification. Notification to the effect has appeared in the *Moniteur*, since the publication of our last article.

The value of the drawings in Paris may be great, as we know is that of many of them that have been published; and Rome may demand more of the architect-student's attention, than any other place. But to give it exclusive attention during such a number of years as five, seems to be to prepare the architect to be narrow-minded and the reverse of artist. Mr. Tite scarcely thinks that great value is attached by architectural students to the travelling studentship,—that is the mere money,—though the gold metal is "very anxiously sought after." He speaks of Northern Italy as affording "infinitely more objects for study" than Rome, and of the desirableness of visiting Greece and Asia Minor. Mr. Scott of course referred to the importance of France for Gothic architecture. Mr. Ruskin being asked as to the system of the French Academy, or one allowing of visits to Venice or Lombardy, said of the two systems, "I should prefer the latter; if a man goes to travel, he ought to travel, and not be plagued with schools." If we might revert to the question of the painter's education, it would be interesting to quote the words of Mr. Herbert, who thinks that generally, much harm accrues to a student from going to Italy, and who would abolish the travelling studentships altogether, unless the students went to Egypt or Algeria, or to countries where art is not found, and where the mind would be directed to nature. Several of our best artists have derived little or nothing from residence in Italy. Mr. Maclise has never resided there for any lengthened period. Sir Edwin Landseer has never been in Italy, though he considers there is advantage, to a student in painting, to be derived from a sojourn in Rome.

We are certainly not inclined to set a low value on travel, as contributing to the education of the architect, or upon a residence of some duration in a foreign capital where many fine works may be seen. On the contrary, we have ere now said, that there is no substitute, not even photographic representation, for seeing examples themselves. Moreover, if the mind keep from being narrowed, there is even value in knowing one thing or class of works thoroughly. But, the error is very great into which some of our architectural students now fall, of studying only what is within easy reach, or attending to the models of only one style, as in the French or the Italian Gothic; and thence, reasoning and acting as though such models comprised the whole capitalized wealth of architecture. The error would be the same, of keeping for five years to the exclusive study of even such works and relics as there are in Rome; and it is not surprising that the French system has not produced results that might have been expected from some of the most promising students sent there. If any place at all deserve from the English student a lengthened residence, that place would be Paris, where work is actually going on. It is necessary to see models themselves, that have contributed to the development of new art in the modern works; but the student must be kept thinking, comparing, and reasoning, as well as drawing and measuring buildings. He will never be an architect without the drawing; and he will never draw or design works of *art*, unless he attain the skill and possess the faculty in youth: but he will be only a draughtsman, not an architect, unless he seek early to understand the different working of many artist-minds. The architects who have done most for the embellishment of Paris, are men who have derived their qualifications from the emulation amongst students, kept up by the system, defective though it may have been, of the École des Beaux Arts, and from the practice of the *ateliers*, added to the effects of the atmosphere of art, as we may call it, which the French capital presents in buildings and decorations, in general tone of society, and in books and publications which are far more numerous, more prominently exposed, and more cheaply attainable than with us. In contrast with the atmosphere figuratively referred to, we in London have the depression of art-energy and art-appreciation, the combined effect from the actual atmosphere that we pollute. Those French students who have been to Rome, have always retained the *prestige* from having gained the "*grand prix*:" many of them have been after their return, chosen as members of the Conseil Général des Bâtiments Civils, or to conduct researches in various countries; or they have published illustrated works of value, results of their investigations; but they have not contributed very much to the art-work which there really is in new Paris. Such work, or most of it, has been produced by men whose names have hardly got to this side the Channel.

Whilst, on this matter, the evidence of some of the witnesses tended to erroneous conclusions, it is to be regretted that more stress was not laid upon the French *atelier* system, as it is called, or that which is developed into the practice of the co-operation of the pupil in the production of his master's works. The most important evidence received by the Commission, referred to the operation of the system in painting of the class suited to the decoration of public buildings. But, beyond the interest which such evidence must have for us from the connexion with architecture of a branch of painting which may be even called a branch of architecture, the evidence, with that on the other side, or stating the difficulties in the introduction of the system in this country, is highly suggestive in the question of the education and early career of our architects. Mr. Edward Armitage gave to the Commission, in his evidence, and in a letter to Lord Elcho (which appears in Appendix, No. 27), a particular account of the manner of his assistance and that of three other pupils of Delaroche, in the production of the great picture in the Hemicycle of the École des Beaux Arts; and the general subject was treated in the evidence of several others. Mr. Armitage indeed said that there was "not a sufficient demand for historical art in England" to create such schools as those of the great French artists, "that the public eye is not yet sufficiently educated to detect" the "weakness in drawing," of portrait-painters and landscape-painters; that, for the assistance in high class work, as mural decoration, to be serviceable," the pupils ""must have been educated by the man who employs them," &c.; and that the "present pupils could not do it." And he subsequently said that in England "nobody knows what drawing is," two hours a day being considered sufficient for learning it; whilst the students in France attend four to five hours a day in the *ateliers* of their masters, and two hours in the École des Beaux Arts. He thinks, however, in his letter, that the experiment of assistants in great mural works would be "worth trying;" though he says the assistance should be given gratuitously, as in his own case. It is discouraging to read that portion of Mr. Dyce's evidence which refers to this subject. When M. Dyce undertook his frescoes in the Houses of Parliament he "expected to have been able to make use of pupils;" but," he says,—

"after a trial I was obliged to give it up. I tried three or four young men, but I found that they could give me no assistance

417*a*. Were they Academy students?—I did not take them from the Academy. I do not know whether they had been Academy students; but I found that I could not avail myself of the services."

He seems to come to the reason in answering the following question, thus:—

"4180. Still it was by that very system of employing pupils under a master, that most of the great works in Italy were completed?—Yes; but there were no exhibitions then. A young man, as soon as he is able to put anything before the public, rushes to the exhibition with it, and it seems the notion of his assisting anybody else is quite hopeless."

Mr. Maclise had previously expressed approval of "that system by which an artist organises a school," but said "it is difficult to obtain" assistance such as would be required for production of a "fresco" like that "in the House of Lords." Mr. Maclise continued, answering question 1480,—

"Young men now-a-days achieve a little success by painting a picture, and they will not do such work. I have often had my eye upon young men of the Academy and elsewhere, with a view to such employment, but I never could get effectual assistance."

He "would employ young" men if he could: his labours would be greatly lightened.

Mr. Watts having made the valuable suggestion that the walls of public schools, as Eton, should be decorated by Academy students, — it might be after Flaxman's designs, — gives his opinion of the advantage of working in the manner described by Mr. Armitage; though he, Mr. Watts, had "never studied in any school." As to sending students to Italy, Mr. Watts considered it was not absolutely necessary, considering the works of art that there are in England; though it was obvious that "the mind must be enlarged" by travel; but he said the present system of sending a student for three years, and leaving him to do much as he pleases, was "productive of no great result," &c.; and a branch academy at Rome would be an improvement. He said:—

"As far as I know, no travelling student has ever turned out to be a distinguished artist, except in the case of Mr. Hook, who only remained in Italy a small portion of his time."

Mr. Watts forgets Mr. Kennedy, who should long ago have been an Academician.

Obstacles to the introduction of the *atelier* system are referred to in the examination of Sir Coutts Lindsay, Bart., who, after allusion to one of the rare instances in England,—mentioning that Sir Charles Eastlake was a pupil of Haydon,—specifies the employment of artists on easel pictures, and the fact that fresco-painting has been misunderstood by artists, and so has not extended the taste for it which he recognizes as capable of development amongst the public. This witness, Mr. Layard, and Mr. Watts, express much the same views as to the existence, in this country, of a taste for mural decoration and historical painting, wanting only that some action should be taken by the Royal Academy, which, Mr. Layard says,

"the fact is," "ought to be an *atelier* on a very large scale; it should be an *atelier* undertaken by a body of men instead of one man." Mr. Layard thinks the church in Margaret-street defective, from the appearance of different minds having been at work. Mr. Watts looks upon "architecture as one of the most important branches of art," and he adds,—

"I lament that the three branches should be called three branches; they were not considered as three branches formerly, but were combined in one, and were practised by one and the same man."

This, of course, may be opposed to the views of Mr. Fergusson, to whose evidence we have alluded, and shall revert. But we quote the next question and answer in the examination of Mr. Watts:—

3163. "The architect builds, while the painter decorates the work of the architect in many cases; in fact, the most monumental painting is that painting which decorates the work raised by architects?—Yes, and the noblest. It would be highly desirable to stimulate as much as possible the taste for that in England, and I think that if a number of buildings were decorated a taste would grow up. *What we have not known we do not care about, but we should care about it if we had it set before us.* It seems to me that it would be highly important, whether it were done by the Royal Academy, or by any other public institution, to decorate the public buildings of England as much as possible. *It is the only way of making the fine arts general.*"

And afterwards:—

"3180. (*Lord Elcho*) Do you think that the taste for those mural decorations is increasing in this country?—Not so much as would be desirable, but that is mainly because they are not enough seen. They are only executed where the public at large do not see them, and I think also they are much too expensive. I should at first employ students upon them, and scatter them abroad as much as possible."

We are not yet through the evidence.

BRITISH PAINTERS.—NEW MATERIALS FOR THEIR LIVES.

Richard Wilson, R.A. (1713-1782).

There is a quarto "Life," so called, of Richard Wilson, the father of our English school of landscape painting. The author, a Mr. Wright, was "a dead hand" at a Life, entirely ignorant of the wants of biography, and incapable of saying clearly and succinctly the little he had to say. Allan Cunningham has told in twenty pages concisely and clearly all that was readily at hand, or the traditions of studios had preserved, to illustrate and relieve a bare narrative of facts. To what Wright and Cunningham have told us, I shall now add a few scattered memoranda respecting Wilson, and a catalogue (*the first of the kind*, and sadly needed) of Wilson's works, with the little information of any moment that is known about them.

Barry, *the great Adelphi* painter, has given us a portrait of Wilson in words, a portrait overlooked by Wilson's biographers. How fine is the reference to Snowdon:—

"I remember meeting Mr. Wilson, one day, looking over a collection of pictures at Prestage's Auction Rooms: on his pointing out with much enthusiasm some excellence in the middle distance of a picture, to which he wished to direct my attention, 'Yes, yes—very true; I heartily agree with you,' said I. 'Surely there is no man now living who is able to paint a landscape of so much excellence!' Though this was said almost laughingly, yet I saw his countenance lower, like a tempest gathering on his own Snowdon; and, seizing him by the elbow, 'My dear Wilson,' said I, 'don't be angry. I only wanted to show you the use, or, rather, the abuse to which your remark might be converted, after you had left the room, by such men as *Blackwood*, or the *Doctors Chauncy* or *Bragge*, had anything in their possession been the subject of your remark.'"[a]

The Mr. Prestage alluded to was an auctioneer of note—a kind of Christie in his day. His "Great Room" was at "the end of Savile-row, next Conduit-street, Hanover-square." I have several of his sale catalogues. Three before me while I write are those of Dr. Bragge and Mr. De Pesters, of Hanover-square. Chauncy was a skilled collector.

At p. 200 of Cunningham's "Life of Wilson" (second edition), is the following note relating to Wilson's famous picture of Ceyx and Alcyone, said to have been painted *for* a pot of beer and the remains of a Stilton cheese.

"From an eminent member of the Royal Academy I have received the following version of this story, to which I could add three others. I have retained in the text the most popular one:—

'In the anecdote of Wilson's painting the Ceyx and Alcyone, there is a slight mistake. The castle and rock of the picture were painted *from* and not *for* a pot of porter and a Stilton cheese. From what I have repeatedly heard Farington say, it was not so much the low prices which Wilson got for his pictures, as the general want of employment which he had to complain of. For such pictures as those of his which Farington had, and Constable has, he used to receive from ten to fifteen guineas, which, according to the value of money then, is quite equal to the prices received by almost any of us now. I won't name the exceptions—I can only say that I am not one.'"

The "eminent member" of the Royal Academy was Sir Augustus Callcott, the landscape painter and R.A. The new version of the story is contained in a letter to Sir Francis Chantrey.

Beechey, we are told (Cunningham's Lives, i. 209), was the steady friend of Wilson: listen, then, to an overlooked account of Wilson, given by Holcroft, the dramatist, direct from the lips of Beechey:—

"Wilson," Beechey says, "was indolent, and, in his latter time, used to make several attempts at each touch, before his hand reached the precise place. In this manner a picture would remain several days on the easel with but little apparent progress. If B[eechey] be accurate, the colours on Wilson's palette did not exceed four, and his common menstruum was linseed oil, instead of other oils eight or ten times as dear. He had much comic humour, would turn from his easel to the window, make whimsical remarks on the passengers, pause to recollect himself, and begin painting again. He was addicted to liquor, by which his nose became enlarged, and so irritable, that the handkerchief was frequently applied to it, and kept in his bosom for that purpose. Glad of every opportunity to escape from labour to his favourite indulgence, he would say to any acquaintance who happened to call, 'Come, let us go and take a drop of something. I have painted enough for one day.' *Farington* and *Hodges* were his pupils; and, many of the pictures that pass for *Wilson's* were painted by them, but retouched by himself. Thus the same picture became multiplied. He would even buy copies made from his pictures, work upon them, and sell them as his own. To a certain degree they were such, but the practice was dishonest; for an unskilful eye could not detect the inferior parts. Acts like these are the ruin of honest and well-earned fame. *Wilson*, however, was a man of uncommon genius, of which he has left sufficient and undoubted proofs. He and *Sir Joshua* had conceived some ill-founded prejudices against each other. Under their influence, *Sir Joshua* once said, at the Academy, *Gainsborough* was the best English landscape painter. *Wilson*, happening to be unperceived at his elbow, replied, 'You mean the best English portrait painter.' If it was not *Opie*, I forget who gave me this anecdote."—*Holcroft's Memoirs* vol. iii., p. 23.

The Gainsborough story is told in Northcote's "Life of Reynolds," ii. 237, second edition.

No. 41 of the Art Treasures Exhibition at Manchester in 1857 (British School) was a most exquisite little landscape, by Wilson, full of Cuyp-like sunshine and perfect in point of condition. The to be envied proprietor of the picture, Mr. Entwisle, the banker, Manchester, has the following memorandum respecting it, in the handwriting of Mr. Winstanley, the well-known auctioneer:—

"The St. Marino view by Wilson was painted for John Hunter, the celebrated anatomist, in whose study it hung for many years. Wilson received twelve guineas for it, and often visited it in his later years.

"At Mr. John Hunter's sale, Mr. Speirs bought it for forty-seven guineas and a half; and he kept it until within these three years, when he sold it to George Townley, Esq., of Bristol, for three hundred and fifty guineas, from whom it was purchased by Mr. Peter Norton, of London, for the same sum. I gave Mr. Norton four hundred guineas for it. The rest you know.

(Signed) "Tho. Winstanley.

"*Manchester, Oct.* 16, 1813."

From John Hunter's twelve guineas to Mr. Entwisle's (I believe) five hundred guineas, is a pretty smart leap in any history of "prices."

Paul Sandby, the well-known landscape painter (whose skill and industry have preserved many buildings now no more), was an admirer of Wilson and a collector of his works. Sandby's sale took place at Christie's, 2nd, 3rd, and 4th of May, 1811, the Catalogue recording "An Invaluable Assemblage of near 70 original Drawings by Wilson." A few tempting lots, real Richard Wilson's, will repay perusal:—

106 (First day). A singular study of rocks: fine effect of sunshine.
97 (Second day). Two original drawings,—View on the Banks of the Dee, in Cheshire; ditto in the Garden at Lerici.
106. A pair. Views of the Brick Kiln in Windsor Park; and View on the River Wye; painted in body colour on panel.
107. A Sutler's Tent near the Serpentine River, Hyde Park, during the Encampment, 1780.
108. A View near Bethgellert.
109. A View of Langolin, Denbighshire.
110. A View of Snowdon from Llanberris Lake.
80 (Third day). A drawing,—The Effect of a Storm. It was from this sketch Mr. Wilson took the idea of painting his celebrated picture of the "Niobe."
81. A ditto,—A Fragment of a Rock. This study appears to have been greatly admired by Mr. Wilson, who introduced it into several of his pictures.

Genuine and fine drawings by Richard Wilson are of rare occurrence, and command high prices.

The last London residences of Richard Wilson were No. 85, Great Titchfield-street, Marylebone; and No. (unknown), Tottenham-street, Rathbone-place. Great Titchfield-street is memorable in the history of English art; for here, only five years after Wilson's death, was born, 18th September, 1787, William Collins, whose sea-shore scenes with shrimpers, "Rustic Civility," and "Happy as a King," have given him an honourable and high position in the British school of art.

A dated list of Wilson's exhibited works will be of use:—

Wilson's Exhibited Works.

1760. A large Landscape with the Story of Niobe.
" A small Landscape, Monument of the Horatii on the Appian Way.
" A small Landscape, the Banks of the River Dee.
1761. The Bridge of Rimini, with the Republic of San Marino.
*** In 18— (?) in the possession of W. Leader, esq.
" Temple of Clitumnus, its companion.
" The Lake of Nemi.
" Its companion.
" Large Landscape with Historical Figures.
" View near Chester.
1762. A View of a Ruin in her Royal Highness the Princess Dowager of Wales's Garden at Kew.
" Its companion.
" A Landscape with Hermits.
" A View of the Thames near Richmond.
" A Ruin at Tivoli.
" A View of Holt Bridge on the River Dee.
1763. A large Landscape with Phaëton's Petition to Apollo.
" A View from Tivoli towards Rome.
1764. A small Landscape with a Ruin.
" Ditto, its companion.
" The Convent on the Island called L'Anconetta, near Venice.
" A Landscape and Figures.
1765. A View from the Villa Madama, three miles from Rome.
*** In 1824 in the possession of the Earl of Egremont.
Edwards says (Anecdotes, 4to., 1808, p. 79) that "The Villa Madama" "was purchased by the late Marquis of Tavistock."
Engraved, 1765, by William Byrn.
" A Summer Storm, with the Story of the Two Lovers (Celadon and Amelia), from Thomson.
*** In 1814 in the possession of William Smith, esq.
" A Landscape and Figures.
1766. North-west View of Snowdon and its Environs.
" Carnarvon Castle.
" Banks of the Tiber.
" A Landscape and Figures.
1767. View from Moor Park towards Cashiobury, Watford, and St. Alban's.
*** Two Views from Moor Park were (1814) in the possession of Lord Dundas.
" Landscape and Figures.
1768. A Storm at Day-break, with the Story of Ceyx and Alcyone.—Ovid Metam.
" A View of the Lake of Nemi from Gensano.
1769. (*The First Royal Academy Exhibition*)
" A Landscape.
" Its companion.

[a] Barry.—Letter to the Dilettanti Society, 4to., 1799, p. 52.

1769. A Landscape.
1770. A Landscape, with Historical Figures.
„ Cicero and his two Friends, Atticus and Quintus, at his Villa at Arpinum. *Vide* Cic. de Leg., lib. 2, p. 74.
*** In 1814, in the possession of William Fitzhugh, esq.
Do. (in 1814) in possession of John Hawkins, esq.
Do. (in 1814) in possession of Sir W. W. Wynn, bart.
Engraved, 1778, by Woollett.
„ A View, three miles from Rome.
„ A ditto, on Hounslow Heath.
1771. A View near Winstay, the Seat of Sir Watkin Williams Wynn, bart.
" A View of Crow Castle, near Llangollen, in Denbighshire.
" A View of Houghton, the Seat of the late Marquis of Tavistock, in Bedfordshire.
1772. A large Landscape and Figures.
„ A small ditto.
1773. A Landscape.
1774. A View from Castello Gondolfo, towards Rome, including the Alban Lake, Monte Cavo, the Campania di Roma, ending with Monte Soracte, and the Sabine Hills.
„ The Cataract of Niagara.
*** Engraved, 1774, by William Byrn.
„ A View of Caderidris Mountains, in North Wales.
„ Oakhampton Castle, in Devonshire, built by Baldwin de Bryone, before the Conquest.
*** In 18— (?) in possession of the Hon. Richard Howard.
1775. The Passage of the Alps at Mount Cenis.
„ A View from Muswell Hill, including Minchenden House, the seat of the Duke of Chandos.
*** Sold to Lord Leigh [? when] for 204*l.* 15s.
„ The Lake of Nemi, or Speculum Dianæ, twelve miles from Rome.
„ A Hermitage at Marino.
1776. A view of Sion House, from Richmond Gardens.
*** In 1814, in the possession of William Leader, esq.
In 1824, in the possession of William Daniell, esq., R.A.
1777. A Landscape, with historical figures.
„ A View from Tivoli towards Rome.
„ A View of the Lake of Nemi, the ancient Speculum Dianæ.
1778. View in Windsor Great Park.
1779. Apollo and the Seasons.
„ A Landscape, with Gipsies.
„ A View in St. James's Park.
„ A Review on Wimbledon Common.
1780. View of Tabley, Cheshire, the seat of Sir John Leicester.
*** Lot 42 of the famous Lord de Tabley sale, by Christie, 7th July, 1827.

I will now give a catalogue, as full as I can make it, of—

WILSON'S PRINCIPAL WORKS.

1. A large Landscape, with the story of Niobe and her Children.—Four pictures exist: 1. That exhibited in 1760, in the first exhibition in the Great Room, Spring Gardens; bought by William Duke of Cumberland (died 1765); since, the Duke of Gloucester's; now (1856), Mr. Wynn Ellis. The burst of light in Mr. Ellis's picture infinitely fine. 2. That presented to the National Gallery by Sir George Beaumont, who bought it of Wilton, the sculptor. 3. Bridgewater Gallery. 4. Collection of H. A. J. Munro, esq., London. Dr. Waagen mentions an example of the "Niobe" at Thirlestain House, "of particular beauty, and various changes in the figures" (iii. 211). Fine engraving by Woollett, 1761. Nollekens Smith assures us (Nollekens, ii. 143) that Wilson received for his "Niobe" 100 guineas.

2. Phaeton.—1. Blundell Weld, esq., Ince, near Liverpool. 2. Earl Cowper, Panshanger. Engraved by Woollett.

3. View of Rome.—Earl of Dartmouth.

4. Mæcenas's Villa at Tivoli.—Six pictures exist:—1. That painted for the Earl of Thanet, purchased by Sir Geo. Beaumont, and presented to the National Gallery. 2. That painted for Mr. Benjamin Booth, of the Adelphi, lately in the possession of the representative of Richard Ford, esq., author of "A Handbook for Spain," and the maternal grandson of Mr. Booth. Sir John Leicester offered 500*l.* for this picture. 3, 4, 5. W. Leader, esq. (1814), J. N[ewington] Hughes, J. Farington, esq. 6. Dulwich Gallery.

5. Lake of Nemi.—Four pictures exist:—1. Sir R. C. Hoare. 2. Richard Ford, esq.

6. Cicero at his Villa.—1. John Hawkins, esq. (1824). 2. Sir W. W. Wynn, bart. (1813). 3. Rev. W. A. Fitz Hugh (1842).

7. View of Anconetta.—J. Heywood Hawkins, esq. (1844).

8. Tomb of the Horatii and Curatii.—In 1824 in the possession of T. Wright, esq., the biographer of Wilson; afterwards in Mr. Bicknell's collection. It is nearly 5 feet in length, and is signed "R. W. Roma, 1754." In 1760 Wilson exhibited "A small Landscape, the Monument of the Horatii on the Appian Way."

9. Temple of Clitumnus, near Rome.—J. Heywood Hawkins, esq.

10. Villa Adriana.—Viscount Palmerston (1813), Robert Vernon, esq. (1841).

11. View in Italy.—Exhibited at the British Institution in 1843 by William Wells, esq., of Redleaf. Most beautiful, though small.

12. Strada Nomentana.—Robert Vernon, esq. (1841).

13. View on the Tiber, with Rome in the distance.—H. A. J. Munro, esq. Grand.

14. Celadon and Amelia.—William Smith, esq. (1813); John Allnutt, esq. (1843). Engraved by Woollett.

15. Landscape, with Meleager and Atalanta.—Sir Thomas Baring, bart.; Samuel Rogers, esq. Engraved by Earlom.*

16. Ceyx and Alcyone.—Engraved by Woollett.

17. Solitude . . . .—In 1814 in possession of J. Todhunter, esq. Engraved, 1778, by Woollett & Ellis.

18. View on the River Dee.—1. Grosvenor Gallery. 2. Sir Thomas Baring, Bart. In 1760, Wilson exhibited "A small Landscape, the Banks of the River Dee."

19. View in Wales, large and good felling timber in the foreground.—Sir W. W. Wynn, Bart.

20. Tabley House, Cheshire.—Was in the Leicester Gallery. Constable speaks of it as "a large solemn, bright, warm, fresh landscape, which still swims in my brain like a delicious dream."

21. Pembroke Castle, South Wales.—In 1849, Sir R. W. Vaughan, Bart. (fine).

22. Snowdon, North Wales.—In 1849, ditto.

23. Landscape (evening effect).—Samuel Rogers esq.

24. Sion House, from Kew Gardens.—W. Leader, esq. (1813); then to W. Daniell, R.A.; next to H. A. J. Munro, esq.

To this enumeration I have to add:—Four small pictures in the Vernon Gallery; one in the Bridgewater Gallery; five at H. A. J. Munro's, esq.; three belonging to the late Richard Ford, esq., author of the "Handbook for Spain." They were painted for Mr. Booth, of the Adelphi. One at Miss Rogers's (the poet's sister); one at W. Fuller Maitland's, esq., Stanstead House; two at Petworth; one at Panshanger; one at the Royal Institution, Edinburgh; one at Keddleston Hall, Derbyshire (Lord Scarsdale's); one at Narford, in Norfolk (Mr. Fountaine's); and one at Wilton House.

Eighty-one pictures of this distinguished painter (many contributed by Farington, his pupil) were exhibited at the British Institution in 1814. A revised and enlarged Wilson Exhibition in 1864 would render a real service to English landscape painting. We are losing breadth of effect and "selection" in mere manipulation of photographic and botanic detail. Hobbema and Peter Nasmyth are masters in mere imitative art—adepts in exquisite minute touches; but Richard Wilson does much more—he (I use another Wilson's† words) places Nature before your eyes and before your imagination. PETER CUNNINGHAM.

* Six small pictures by Wilson were sold at Mr. Rogers's sale at Christie's in 1856: the prices ranged from 130 to 135 guineas.

† Professor Wilson, the poet.

SCIENCE IN SHOPS.

HALF a century ago our forefathers recognized but few of the advantages of division of labour: a tradesman engaged in half a dozen different businesses; but a tendency to elaborate the workings of this department of social science, to divide and sub-divide the occupations by which men obtain livelihoods, is quietly gaining ground. Fifty years ago a country chemist was, generally, also a bookseller, printer, book-binder, owner of a circulating library and fancy repository, a vendor of musical instruments, and, in all probability, a dealer in brushes and perfumes: in other cases, one counter in his shop was devoted to the sale of haberdashery or grocery, or both; the other to that of drugs. Drapers furnished funerals, sold boots, shoes, hats, and were tailors too. Going further back we know that the term grocer, now applied only to dealers in tea, coffee, and spices, was originally synonymous with that of merchant, one who engrossed every kind of merchandise. To this day, in small north-country towns, ironmongers are smiths, plumbers, and glaziers, and sell haberdashery, such as thimbles, needles, and pins; dealers in glass and china are coopers, basket-makers, brush and mat dealers, and vendors of toys and mock jewelry; grocers are wine and spirit merchants, or tobacco manufacturers; cabinet makers are auctioneers, undertakers, paperhangers, and upholsterers; and in villages, there are still more complicated combinations in the traders; but in larger spheres the advantages to be derived from a concentration of attention to one branch of the arts or one department of commerce are becoming generally understood. The building trades scarcely follow this rule, except as to individual labour: in large communities, one contractor undertakes to furnish every kind of material and handicraft required: in small communities the master-man of each craft takes a separate contract, to which his liability is limited.

It is, however, more especially to the application of sanitary science to shop-keeping that we now refer. Every trade may, more or less, be benefited by it,—not, of course, in the amount of business transacted, but in the cost of life and health with which it is attended; and the manner in which it is so affected is, to a great extent, attendant upon the mode in which shops and shop-fittings are planned and constructed. On entering a chemist's shop, it is seldom but that our olfactory nerves are saluted with a combination of strong smells that convincingly account for the pallid countenances of the persons that are employed in it. If fitted up, however, on what might be called scientific principles, there would be no more smell than there is in a duchess's drawing-room. It will be conceded that the aroma of a drug is part of its value: deprive it of its scent and you rob it of much of its taste: it is, therefore, true economy to provide such conditions in its place of deposit that none of its smell shall escape. Place every drug in a receptacle whence none of its properties can escape, and there is no smell left in the chemist's shop. Again, if a range of fixtures were to be devoted exclusively to oils, another to essences, another to poisons, and so on, instead of these various matters being disposed promiscuously, the only regard being paid to the size of the bottles required to hold them, we should hear still less frequently of mistakes in the making up of prescriptions, with their consequent train of miseries. These are plans proposed by those who have given the subject attention, and adopted with the realization of every expectation formed concerning them, in some instances of newly-fitted chemists' shops. The contents of the shops of chemists and druggists have another and still more weighty, because extensive, bearing upon the public health. Chemists can tell of many wonders of the earth and the air and the deep, but nothing more wonderful than the mystical manner in which people are able to persuade themselves that everything that comes out of a physic-bottle does them good. Old ladies with all the tremble of aspen-leaves in their withered hands, women in the heyday of fashionable life, as well as the wigged and brass-buttoned beaux of the last generation and fast men upon town, frequent the chemist's shop for draughts that will steady the shaking hand, re-kindle the faded eye, re-vivify the stiffening gait, or remove the splitting headache. A draught of *eau-de-vie* rendered still more subtle in its effects and pungent in its taste by a combination with sal volatile and the yolk of an egg, if poured out of a physic-bottle instead of a decanter, is assumed to have completely altered its character. The most concentrated stimulant, if taken in the form of a pill, is deemed innocuous. Musk pills, for instance, are swallowed in confident and complacent anticipation of their rejuvenescent properties by patterns of propriety who would shrink from the odium of taking a recognized stimulus. So largely are wines and spirits used in the making up of stimulating draughts, that a chemist takes out a licence as a matter of course. The inquirers into the ramifications of sanitary science have not yet taken into consideration these outside facts.

The adulteration of food as sold in shops, the disastrous effects of what is called the "long hours system," in which fourteen or sixteen, and occasionally eighteen, hours out of the twenty-four are spent in close confinement to business, whether in a sitting or standing posture, have chapters of their own. The importance of a

judicious ventilation of shops enjoys no such prominence on the pages of science: in the planning of shop-fittings this necessity is but too frequently overlooked. In the summer months, it will be argued, every shopkeeper keeps his door open, and thus sufficient ventilation is insured; and in the winter there is enough cold air wafted in every time it is opened to supply the necessary change. But the thousands of shop-assistants will tell a different tale. When they first enter their respective shops in the morning, they are nipped with cold: as the fires or stoves draw up, the temperature becomes more equable; but as the evening wanes, and dozens or scores of gas-burners are lighted, the air is as oppressively heated as it was inclemently cold: they endure, in other words, every day throughout the winter all the alternations of climate they would experience in a diurnal transformation from the Hebrides to Hindostan. The proper heating and ventilation of shops is as imperative as that of work-rooms, and there is no chance of effecting these unless they are constructed on scientific principles. We have been called a nation of shopkeepers, as a term of reproach. Calling art and science to our aid, let us make our shops as handsome as palaces and as healthy as the hills.

QUARTERLY WRITERS ON ENGINEERING.*

Of all the departments of knowledge supposed in this age to be accessible to that mysterious being the general reader, engineering science visibly plays the most prominent part. The daily realizations of Arabian Night dreams by engineering means, and the intimate interweaving of mechanical science with almost all the phases of modern life, naturally create a curiosity in the popular mind as to the causes of these remarkable effects. There is thus a demand for capable popular writing on these subjects,—a demand which appears to exceed the supply. The most audaciously insufficient trash is the result. Just as each ignorant pretender, lacking everything but impudence, now-a-days dubs himself a "C.E.;" just as every boy so unlucky as to scrawl a sketch with the mistiest resemblance to a steam-engine is at once styled "a mechanical genius" by his fond mamma; so does every smatterer, scarcely able to distinguish a pump-bolt from a cow's tail, think himself capable of writing on engineering matters:—

> "As he that makes his mark is understood
> To write his name, and 'tis in law as good;
> So he that cannot write one word of sense,
> Believes he has as legal a pretence
> To scribble what he does not understand,
> As idiots have a title to their land."

It is impossible to take up any of the morning papers without noticing some of the engineering forms of this disease; but the exigencies of daily publications are some excuse: when, however, we see the *Quarterly Review* stoop to blunders, it seems necessary that some notice should be taken of it.

Under the title of "Progress of Engineering," the present number of the *Quarterly*, as we have already mentioned, has favoured the public with a supposed "bird's-eye" view of ancient and modern engineering. The paper claims to be a compound boiled down from all the "Proceedings of the Institute of Civil Engineers;" supplemented by Mr. Smiles's "Lives of the Engineers," and by the late speech of Sir William Armstrong at Newcastle. The editor of the *Review* has placed it at the post of honour, the beginning of the number.

The belief of some editors of popular periodicals that experts cannot take a bird's-eye view of their several professions, may be well founded; and it may be true that the productions of amateurs are often more readable than those of experts; just

> "As little sparkles shine more bright,
> Than glowing coals that give them light."

The *Review*, however, has a quarter of a year's time to compile its lucubrations.

One of the most astounding bits of information vouchsafed to us by the *Quarterly Review* is the following:—"When we first made railroads we allowed a quarter of an inch free space between each bar, and took every precaution for freedom of expansion and contraction, till one man, bolder than the rest, proposed *to butt them one against the other, and join them with fish-plates.* This has now been done, so that the rail from London to Aberdeen is one continuous unbroken bar; *it neither expands nor contracts (!), but submits.*" We should be sorry to see the reviewer travel on a pair of "continuous unbroken bars." If he insisted on the trip, we should recommend him to previously make his will. For the "continuous unbroken bar" in January would be a wriggling serpentine bar in June, diversified in some places by a series of picturesque long-bows of iron. Some occult and mysterious force is here supposed to belong to "fish-plates," by which they acquire the power of temporarily suspending the law of nature of the expansion and contraction of metals by heat, in the same way as it is in human power (p. 310) "to eliminate friction and other resistances which are not inherent" (to bodies). We find (p. 294) that "air is, perhaps, too elastic to be ever practically used as an accumulator." The "perhaps" in this sentence would make the assertion excusable if the reviewer had never,—which we can scarcely think,—seen a common air-gun. We are further informed that Cornish boilers are so economical principally because "the fire-bar area is so great;" that some steam-engines make 1,000 strokes in a minute; that locomotives consume "coals with reckless wastefulness;" and that the "vital heat" of a locomotive "is launched into the air with the waste products of combustion." Such statements are below criticism. When the reviewer writes that "it is no hyperbole to say that already, within the last hundred years, the engineers have doubled the mechanical power, and have thus doubled the productive resources of mankind," engineers would be very much flattered, did they not remember that engineering has done much more. A rolling-mill employing 100 men, will turn out 10,000 tons of iron per annum. The manufacturing power of each man is thus 100 tons of iron per annum. A rolling-mill is thus estimated by M. Michel Chevalier to have multiplied the manufacturing power of one man by thirty. One man can now spin 400 times more thread than in 1769, when Arkwright took out his first patent. Compared with what one man could do at the ancient wind-mill, a modern miller can grind about 150 times as much corn. The new mechanical appliances now used in California for extracting gold have multiplied the productive power of a single gold-digger by 2,500. By means of modern machinery one woman can now make 100 times as much lace as by hand-work. An iron-plated ship, of say 1,400 horse-power, nominal, has, in reality, the power of 42,000 horses of flesh and blood,—a number of horses probably never seen together, or, at least, only once or twice in the world's history.

The reviewer points to Sir William Armstrong as the first inventor of water-power engines. Engines on this principle are described in that venerable work, "Belidor's Architecture Hydraulique;" and it is stated therein, that those engines were built in 1731. The reviewer appears to be unaware, that piston and cylinder engines driven by gunpowder have been used with some success, although the plan failed to dethrone King Steam. We are quietly informed that "the invention of a practical (steam) engine is hardly more than eighty years old," although Watt took his famous condenser patent in 1769, and although Newcomen's engine was in use for seventy years previously to that date. So far from Newcomen's engine being quite "unpractical," there are actually some old specimens yet extant and at work in out-of-the-way parts of the country where fuel is cheap.

The canvas, as a whole, might form an interesting picture, although the separate figures were marred by incorrect drawing. But this picture is not merely badly arranged, but many important figures are entirely left out. We thus find no mention of the application of steam to the farm. Steam ploughing is now effecting the most important changes not merely in the productive power of the farm labourer, but in the productive power of the farm itself. No mention is made of the Bessemer process of making steel, which is said by a good judge, M. Michel Chevalier, to be "*Pour la puissance du genre humain et pour son bien-être d'une autre portée que la découverte des mines d'or de la Californie et de l'Australie.*" We see no mention of the late application of engineering,—the sluice system,—to the working of Californian gold; no mention of the pneumatic despatch, although the plan will be, very likely, applied to underground railways; no mention of the application of engineering to warfare, in the shape of the Whitworth, Armstrong, and other rifled guns; of the new rifles; and of the use and influences of railroads on warfare.

What are the philosophical reflections of the reviewer on the extraordinary steps in material progress that he could not fail to notice? He begins his paper with a definition of man "as a road-making animal;" a definition which, he carefully informs us, "has *not* yet found its way into the books." He might just as well define man as a "shoe-making animal,"—in fact, the latter would appear to be the best "definition." Is it not well known, by the bye, that the only roads in America before its colonization by the white man were the tracks formed by the buffalo herds on their way to the "salt licks?" His paper is really but a piece of patch-work, formed out of his common-place book.

And yet, what a splendid subject for a pen worthy of the theme!—to show that the principal steps in civilization were effected by successive subjugations of mechanical power to labour; from the use of beasts of burden to the employment of slaves by a dominant race; until, at last, slaves are completely, and animals partially, superseded by the powers of nature;—to trace the influence of invention on modern civilization; to point to gunpowder beating down the castle walls, and the costly armour of their lords; the printing-press destroying the monkish thraldom of the Middle Ages; the magnetic needle discovering a new world; the immense extension in the powers of production and locomotion by means of the steam-engine.

Last year's Exhibition, though so faultily arranged, might have been one immense study for a mind really desiring to trace the "Progress of Engineering;" but its teachings have been neglected in the article to which we have thought it necessary to point attention.

* This article was in type before the issue of our last number.

ART WORKMANSHIP AT THE SOCIETY OF ARTS.

In reply to the offer of premiums made by the Society of Arts some time ago seventy works have been submitted, many of them very good, and are now under adjudication. The number of works sent in is thus divided:—

1. *Modelling in Terra Cotta, Plaster, or Wax.*—(*a*) The human figure in bas relief, after Raffaelle's design of the "Three Graces."—23.

(*b*) Ornament in bas relief, after arabesques by Lucas van Leyden, 1528.—8.

2. *Repoussé Work in any Metal.*—(*a*) The human figure as a bas-relief, after Raffaelle's "Three Graces."—3.

(*b*). Ornament, after a Flemish salver in the South Kensington Museum, date about 1670, No. 1153.—1.

3. *Hammered Work, in Iron, Brass, or Copper.*—Ornament, after an iron German arabesque, about 1520, in the South Kensington Museum, No. 2450.—2.

4. *Carving in Ivory.*—The human figure in bas relief, after a terra cotta ascribed to Luca della Robbia, about 1420, in the South Kensington Museum, No. 7610.—4.

5. *Chasing in Metal.*—(*a*) The human figure, after a reduced copy of Gibson's "Psyche."—6.

(*b*) Ornament, after a bronze plaque in the South Kensington Museum, No. 1217.—11.

6. *Enamel Painting on Metal, Copper, or Gold.*—(*b*) Ornament in Grisaille, after a German arabesque, 16th century.—1.

7. *Painting on Porcelain.*—(*a*) The human figure, after Raffaelle's "Boy bearing Doves," in the cartoon of the "Beautiful Gate."—5.

(*b*) Ornament, after arabesques by Lucas Van Leyden, 1528, and coloured according to the taste of the painter.—3.

8. *Inlays in Wood (Marquetry, or Buhl), Ivory, or Metal.*—(*b*) Ornament, after a majolica plate in the South Kensington Museum, 1490, No. 1671.—2.

9. *Engraving on Glass.*—None.

10. *Embroidery.*—Ornament, after a German example in the Green Vaults at Dresden.—1.

At present the works are undistinguished by mottoes or names, so that reference to any of them in words cannot be made. These, however, will be supplied, and a catalogue is in preparation.

A committee has been appointed by the council to arrange the terms of a fresh competition. It held its first meeting on Tuesday last; Mr. W. Hawes (in the chair), Mr. H. Cole, Mr. Redgrave, Mr. M. Nelson, Mr. Godwin, Mr. Crace, Mr. Stevens, Mr. John Webbe, Mr. Le Neve Foster, and others being present, when various preliminaries were agreed on.

The Graphic Society.—The first *conversazione* of the new session, which is the 31st, will be held on Wednesday, the 9th, at University College, as usual.

QUALITIES OF STONE IN THE ISLAND OF PORTLAND.

UNDER the direction of the Inspector-General of Fortifications, Mr. F. A. Abel, F.R.S., some time ago made an examination into the comparative qualities and fitness for building purposes, of samples of stone from different quarries in the Island of Portland. We are glad to be able to lay the results before our readers:—

A collection of twenty-eight specimens, representing the stone obtained from different quarries and beds on the Island of Portland has been submitted—

1. To a careful comparative inspection.
2. To experiments having for their object the attainment of comparative data, regarding
   a. The chemical composition of the stones.
   b. Their strength and power of resisting wear from mechanical causes.
   c. Their porosity, or absorbent power, and consequent susceptibility to the destructive effects, mechanical and chemical, of atmospheric agents.

As regards chemical composition, the differences, indicated by the analysis of the specimens of stone from different quarries, are only of a trifling description, and not calculated to influence in any definite manner the comparative durability of the different varieties of stone.

The properties which it is considered should, apart from the questions of chemical composition and facility of working in the mason's hands, be combined in a building stone, capable of resisting effectually the fullest exposure to atmospheric influences, are—

1. Compactness of structure, or a low degree of porosity.
2. Strength and hardness (to the greatest extent compatible with the working of the stone).
3. Uniformity of structure.

The results of my experiments show that all the superior descriptions of "*Whit-bed*" stone combine strength and compactness in a considerably higher degree than the varieties of "*Base-bed*" stone. Some kinds of the "*Whit-bed*" stone, however (*i.e.* those from the New Maggot and Inmosthay quarries), though ranking with the best as regards strength, exhibit a greater degree of porosity. Again, other "*Whit-bed*" stones (from Old Maggot, Waycroft, and Independent quarries), exhibit but little superiority, in point either of strength or compactness, over the generality of the "*Base-bed*" stones; and are, indeed, inferior to the best "*Base-bed*" variety.

The "*Base-bed*" stones are, undoubtedly, more generally uniform in structure than those of the "*Whit-bed*;" this being mainly due to the comparative freedom of the former from distinct petrifactions. Though such petrifactions were shown, by the results of experiments, to impart, in many instances, great additional strength to the stone, they frequently give rise, by their existence, to cavities, sometimes of considerable size, which not only serve to weaken those particular portions of the stone, but may also, if they exist in proximity to exposed surfaces of a block of stone, promote its partial disintegration by the action of frost.

Greater care is, therefore, unquestionably required in the selection of "*Whit-bed*" stone than need be employed in the case of all the better varieties of "*Base-bed*" stone.

I append to this memorandum, in a tabular form, a statement of the comparative strength and compactness of the different varieties of stone, as represented by the specimens experimented upon, together with a description of the peculiarities noted, on examination of the specimens, many of which have an important bearing upon the results obtained in the experiments instituted with the blocks.*

The results of my experiments lead me to the following conclusions, regarding the comparative merits of the various descriptions of Portland stone in question, for building purposes.

The *Roach* stone from "*War Department*" *Quarry* is an invaluable stone for *external* work, in localities where very considerable strength, and power of resisting mechanical wear are required (*e.g.*, in connexion with those portions of work which may become exposed to the continual abrasive action of water).

The *rough* "*Whit-bed*" stone from *Admiralty Quarry* (as represented by specimens 1 and 2, see table), is also a highly valuable stone for external work, of a similar kind, where great strength is required, and particularly where the numerous irregularities in the above *Roach stone* may be objectionable.

The following varieties are all well calculated for *external* work, and I consider that the order of their relative value is as follows:—

1. Stone from *War Department Quarry, Vern Hill.*
   "*Whit-bed*" stone, *Admiralty Quarry.*
2. "*Whit-bed*" stone, *New Maggot Quarry.*
   "*Base bed*" stone, *Admiralty Quarry.*
   (This may be considered quite equal in quality to Whit-bed stone.)
   "*Whit-bed*" stone, *Inmosthay Quarry.*
   (Particularly adapted from its texture and uniformity for ornamental work.)
3. Whit-bed stone, *Old Maggot Quarry.*
   (*a*) Marked L I.
   (*b*) Marked I T and I E.

For *internal* work, the following rank highest, on account of uniformity and comparative strength:—

"*Base bed* stone, *Old Maggot I T.*
"*Whit-bed*" stone, *Independent Quarry.*
"*Base-bed*" stone, *Waycroft Quarry.*
"*Base-bed*" stone, *New Maggot Quarry.*

The following are inferior to those just named, in texture and uniformity:—

"*Whit-bed*" stone, *Waycroft Quarry.*
"*Base-bed*" stone, *Old Maggot Quarry I E.*
"*Base-bed*" stone, *Inmosthay Quarry.*

The "*Base-bed*" stone from *Old Maggot Quarry* marked L I, and that from *Independent Quarry*, are of low quality, as compared with the remainder; and no reliance can be placed on the durability of the *Roach stone* from *Independent Quarry*, judging from the specimen received.

I may observe, that no definite conclusion can be drawn, from the comparative properties of the specimens of stone from one and the same locality (quarried at different periods of time), regarding the influence exerted by exposure, after quarrying, upon the quality of the stone.

In the instance of the example of *rough* "*Whit-bed*" stones from *Admiralty Quarry*, the specimen quarried last autumn was decidedly the strongest (that quarried three years ago differed altogether in character from the other specimens). The specimens of "*Whit-bed*" stone from the *Admiralty Quarry* were very much alike in strength, there being a slight difference in favour of that quarried three years ago. In the "*Base-bed*" specimens, from the same quarry, the strength was also found to increase somewhat with the age of the stone; but of the specimens from the *War Department Quarry*, the one most recently quarried was considerably stronger than the others. Here again, however, the difference must be ascribed to a difference in structure: the other two specimens (quarried last autumn and three years ago) were in all respects alike.

On the whole, the evidence may be considered as a little in favour of the opinion, that an improvement in the strength of the stone is effected, to some extent, by seasoning.

F. A. ABEL.

Woolwich.

* These experiments consisted, chiefly, of careful determinations:—

1. Of the comparative absorbent power exhibited, under precisely similar conditions, by cubes of the different stones; and

2. Of the weight sustained, up to the point of fracture (*i.e.* the crushing weights), by accurately cut cubes of the stones. These cubes of each variety of stone were crushed, and the conclusions, as to the comparative strength of the stones, were drawn from the mean results thus arrived at. These crushing experiments were carried out with the well-known American mechanical testing machine.—F. A. A.

TABLE

Showing the comparative Orders of Strength and Compactness of Samples of Stone from different Quarries in the Island of Portland.

Description of Stone.	Order of Compactness.	Order of Strength.	Peculiar Features of each Stone.
ROACH.			
War Department, Vern Hill Quarry	One (The compactness of these is about as high again as those next in order.)	One	Light coloured, very hard, and compact, one of the heaviest stones of the series; its weight being very much greater than that of the *Roach* from Independent Quarry. Its strength is not uniform, as it contains numerous shells and cavities.
ROUGH WHIT-BED. *Admiralty Quarry.*			
Quarried recently	Two	Two	Rough, but compact; contains numerous small shells.
Ditto last autumn	Two	One	Containing only few cavities.
Ditto three years ago	Between Six and Seven.	Between Four and Five	Very rough and irregular, containing large shells; differing, therefore, greatly from the other samples from Admiralty Quarry.
War Department Quarry, Vern Hill. (Bed not specified, evidently WHIT-BED.)			
Quarried recently	Three	One	Hard, and very compact; containing, however, some large cavities.
Ditto last autumn	Four	Three	A very hard light coloured stone, containing numerous pin-hole cavities.
Ditto three years ago	Four	Three	Similar to No. 1 from this quarry, though somewhat less compact, apparently free from cavities.
WHIT-BED. *Admiralty Quarry.*			
Quarried recently	Four	Three	All these samples very similar. Light-coloured compact stones, containing a few small shells. Apparently free from cavities.
Ditto last autumn	Four	Three	
Ditto three years ago	Four	Two	
Inmosthay Quarry	Six	One	Fine grain, moderately compact, almost destitute of shells; one of the most uniform of the Whit-bed series.
New Maggot Quarry	Five	Two	Light-coloured, compact, and very uniform.
BASE-BED. *Admiralty Quarry.*			
Quarried recently	Four	Three	Nos. 1 and 3 are similar; light-coloured, compact, and very uniform. No. 2 is somewhat darker, and exhibits patches of closer texture. They exhibit more indications of shells than any other Base-bed stones; and are, in appearance and properties, very similar indeed to Whit-bed stone.
Ditto last autumn		Two	
Ditto three years ago		Two	
WHIT-BED. *Old Maggot Quarry.* marked I T	Between Six and Seven	Four	Nos. 1 and 3 are much rougher in texture than No. 2, which is a little superior to them in compactness, but is somewhat less uniform.
,, L I	Six	Three	
,, I E	Between Six and Seven	Four	
Waycroft Quarry	Seven	Four	Rough in texture and porous.
Independent Quarry	Between Seven and Eight	Four	Fine grained, but porous.
BASE-BED. *Old Maggot Quarry.* marked I T	Seven	Three	I T is uniform, but I E exhibits faint bands of stratification. L I is about the lowest quality of Base-bed stone examined. It is very soft and porous.
,, I E	Seven	Five	
,, L I	Ten	Six	
Waycroft Quarry	Eight	Four	Light-coloured and uniform.
Inmosthay Quarry	Eight	Four	Exhibits considerable want of uniformity.
New Maggot Quarry	Nine	Three	Very uniform; similar to I T Old Maggot Quarry, though more porous.
Independent Quarry	Nine	Six	A rough very porous stone, exhibiting considerable difference of strength in different portions; to be ascribed to the fossil markings observed here and there.
ROACH.			
Independent Quarry	....	....	A very inferior description of stone. Full of large loose petrifactions and cavities of considerable size. The strength of the most compact portion was only about half that of the weakest of the above stones.

Through the kindness of Professor Abel, we are enabled to add the following statement of the weights actually sustained by 2-inch cubes up to crushing:—

War Department Quarry, Vern Hill ..	14795·8	lb.
Inmost-hay Quarry, Whit-bed	14591·8	,,
Admiralty Quarry, Rough Whit bed ..	14387·7	,,
,, ,, Whit bed.....	13979·5	,,
,, ,, Base-bed.....	13775·9	,,
New Maggot Quarry, Whit-bed	12857·1	,,
Old Maggot Quarry, L I Whit-bed	12244·8	,,
Independent Quarry, Whit-bed	11632·6	,,
Old Maggot Quarry, I T Base-bed	12857·1	,,
,, ,, L I Base-bed	8163·2	,,
Waycroft Quarry, Base bed	11836·7	,,

The cubes were crushed between perfectly smooth lead surfaces.

SUBJECTS FOR PREMIUMS, SOCIETY OF ARTS, 1863-64.

STOCK PRIZE.

Under the will of John Stock, funds are bequeathed for the offer of a medal for the encouragement of drawing, sculpture, and architecture.

Shell Cameo.—On the present occasion the Society's medal is offered to female artists, for the best cameo designed and executed on any of the shells ordinarily used for that purpose.

DENTON PRIZES.

Cottages for the Labouring Classes.—Two prizes, of 25*l.* each, are placed in the hands of the council by Mr. J. Bailey Denton, to which are added the Society's medals, to be offered for the most approved designs for cottages, to be built singly or in pairs, at a cost not exceeding 100*l.* each. One prize is to be competed for by members of the Architectural Association, and the other is open to general competition.

Detailed particulars have been issued, and may be had on application to the Secretary.

The plans, drawings, and specifications, must be sent to the Society's house, not later than the 1st January, 1864.

ART WORKMANSHIP AND WOOD CARVING EXHIBITION AND PRIZES.

Prizes are offered by the Society in these subjects, and an exhibition will take place in 1864.

Special lists relative to this competition will be issued.

GENERAL LIST.

The Society's medals will be awarded for communications or discoveries in relation to the following amongst other subjects:—

Goldsmiths' Work.—For the best essay on ancient goldsmiths' work.

Bronzes.—For the best essay on the manufacture and casting of bronzes, and on bronze washes.

Moulds for Metal Casting.—For the production of a material to be used in the formation of moulds for casting bronzes and other molten metals, so as to enable the casts to be produced without seams.

Pigments.—For an account of the various pigments used in the fine arts, with suggestions for the introduction of new and improved substances.

Substitute for Wood Blocks.—For the discovery of a substitute for the blocks used by wood-engravers, so as to supersede the necessity of uniting several pieces of wood.

Photographs on Enamel.—For the best portrait obtained photographically and burnt in in enamel.

Photographs on China.—For the production of a dessert or other service, in china or earthenware, ornamented by means of photography and burnt in from an impression obtained, either directly from the negative, or from a transfer from a metal plate obtained directly from the photograph.

Reproducing Designs for Printing.—For a rapid means of reproducing artistic designs or sketches, for surface printing by machinery, such process to provide for lowering portions of the work to fit it for steam printing.

Green without Arsenic.—For the manufacture of a brilliant green colour, not containing arsenic, copper, or other poisonous materials.

Artificial Stone and Terra Cotta.—For an account of the various artificial stones and terra cottas introduced and employed for purposes of construction, stating their properties, advantages, and imperfections, and their relative cost.

Protecting Iron.—For the invention of an efficient method of protecting iron from the action of air and water, applicable to the various forms in which iron is used as a building material generally, and also to iron ships and armour-plated vessels.

Elastic Tubing.—For an elastic material for tubing suited to the conveyance of gas, and not liable to be affected by alterations in temperature, or to be acted upon by the gas itself.

Colour for Slate.—For the preparation of light colours to be used in enamelling or japanning slate, which will stand the action of the heat from the fire without blistering or discoloration, and be sufficiently hard to resist scratches.

Coating Walls.—For the production of a cheap white enamel-like composition for the interior walls, &c., of houses, applicable to all ordinary surfaces, easily cleansed, and not liable to crumble or chip, and capable of being tinted.

Substitute for Turpentine.—For a new and efficient substitute for turpentine applicable to the manufacture of varnishes, and to purposes for which turpentine is now ordinarily applied.

Rollers for Printing Paper-hangings.—For a composition for feeding rollers for printing paper-hangings by cylinder machinery, similar in consistency and texture to the gelatine rollers used in letter-press printing, but adapted for working in water-colours.

Paperhangings coloured in the Pulp.—For the manufacture of papers from the coloured pulp, bearing upon them designs, either coloured or white, discharged after the manner of calico-printing.

Emigrants' Dwellings.—For the best essay (for the information of emigrants proceeding to new settlements) descriptive of the means of treating existing natural products in any locality, such as earth, shells, chalks and limestones, woods, barks, grasses, &c., and applying them in the construction of dwellings. Diagrams and illustrations of the methods of applying materials should be given.

THE PROJECTED RAILWAY AND OTHER WORKS.

Among the Parliamentary notices is one for the construction of a railway bridge across the Frith of Forth, to facilitate the communication between the Eastern Lowlands of Scotland and the north. The point thought of to construct a bridge at first was Queensferry, where an island divides the strait into two, but the Admiralty object to any structure which would prevent their ships passing to the anchorage above, while the depth of the water is also another reason why the only bridge permissible there should be a suspension-bridge. The span of such a bridge, however, would exceed anything hitherto known. The point fixed upon is four miles above Queensferry, and at which the Edinburgh and Glasgow Railway on the south side, and the Dunfermline railways on the north side of the Frith, run nearest to the respective shores. Locally the point is known, on the south side, as Pardovan, and on the north side as Charleston. This new bridge is proposed to be constructed by an independent company, who will afford running powers and facilities to all the railway companies choosing to make use of it. The bridge, which will be built on about fifty piers, will necessarily be of great length—nearly as long, it is said, as the Victoria Bridge across the St. Lawrence. The cost, however, is not estimated to exceed half a million; whilst the Victoria Bridge, which had to be exported, cost nearly a million and a half. It is anticipated that the work will be completed in less than three years from its commencement.

The total number of notices for all kinds of new undertakings amounts this session to 450, being an increase of 100 on all preceding sessions; and of this number nearly 300 are for new railways, branches, amalgamations, and extensions. Among the railway works is a Victoria Station and Thames Embankment underground railway, running by Westminster Bridge to Blackfriars Bridge. There is also a London Low-level Railway project, with six distinct lines running underground from Victoria-street to Dowgate-hill *viâ* the Thames Embankment; from Westminster to Charing-cross *viâ* Great Scotland-yard; from Great Scotland-yard to the Charing-cross Railway Bridge; from the first-mentioned to the Metropolitan Underground at Farringdon-street; from the one joining the Metropolitan, and running under Ludgate-hill, Printing-house-square, and New Bridge-street, Blackfriars, to St. Bride's and St. Ann's, Blackfriars; lastly, from the first-named line to Cripplegate and the Finsbury extension line of the Metropolitan, *viâ* King William-street, London Bridge, and Fenchurch-street. Moreover, there is a Blackfriars Roadway and Railway project, with an embankment from the Inner Temple, at the termination of the authorized embankment, to Blackfriars Bridge, with roadway above and railway under the roadway, &c. Another project is the Tower subway, under the Thames from Irongate-stairs to Horseydown Old-stairs. The Metropolitan Board of Works are applying for additional powers in reference to the Southern Embankment of the Thames at Stangate, in Lambeth, for the altering, widening, and improvement of the approaches to Palace New-road, and of Stangate, and for other purposes. The City corporation have also advertised their intention of applying to Parliament for an Act to carry out the Holborn Valley improvements.

OPENING OF NEW WING OF RADCLIFFE INFIRMARY, OXFORD.

At a special court of the governors of the Radcliffe Infirmary, the building committee has formally handed over possession of the south wing, which has been erected at a cost of 6,000*l.*

The out-patients will enter the grounds of the infirmary by the ordinary lodge, as now, under the observation of the porter. The outer door leads into a lobby, which will be provided with a drinking fountain. Opening from the lobby are retiring-places for each sex, and a bath-room with a lavatory. The out-patients' hall, at the north-eastern end of the new wing, is 71 feet in length, 25 feet in width, and about 20 feet average height. There are six plate-glass windows to the south, hung on sashes, opening above and below, and reaching to nearly the top of the wall. To the east, west, and north are circular lights, made to open. In the ceiling are fourteen trap-doors, opening and shutting by a simple arrangement. The roof is pierced by ventilators on the north and south sides, and at both ends. The hall is warmed by a large open fire-place, and by hot-water pipes on the low-pressure system. On the north and west sides of the hall are six rooms placed in pairs for the medical staff, and for three physicians and three surgeons.

The clinical professor's room opens into the shop corridor as well as into the hall. It has twice the cubical contents of the other medical rooms.

The accident ward, at the south-western end of the new wing, represents a ward unit on the pavilion principle; to which is added, for convenience, a casualty-room for the first reception of accidents, and for minor surgical casualties. The ward unit comprises the ward itself, with closets, bath-room, nurses' room, scullery, nurses' closet, and other lesser appliances. The ward is 78 feet in length, by 26 feet 6 inches in width, and 18 feet in height. Twenty bed-places are fitted up, giving to each bed 1,860 cubic feet of air. There are six windows on the south, with a similar and opposite set on the north, excepting only the second from the entrance, which is replaced by a fire-place. The sashes are of oak, with plate-glass ¼ inch thick, opening both at the top and bottom. To prevent draughts either through the window-frames or from the cold outer glass, glass frames have been provided resting on the window-sill, 2 feet 4 inches in height, and of the same width as the window, which will in effect make the lower part of the windows double; and, if required, these frames can be raised to any height hereafter. Ventilation does not wholly depend on the windows. In the ceiling, between each truss of the roof, is a hinged trap-door, readily opened and shut: all together affording 72 superficial square feet of air-passage into the roof space.

The roof is pierced north and south, and east and west, by eight opposed open ventilators for the exit of foul and introduction of fresh air. Besides, in the centre of the floor, between the feet of the beds, are six apertures, which can be opened or closed, communicating with a chamber in a cellar east of the ward. This chamber is supplied with fresh air by an aperture, 3 feet by 2 feet, and may be heated by the furnace which heats the out-patients' hall and the shop corridor. The air flue can be disconnected at will. In addition to these sources of air and means for promoting its due circulation, there are in the piers between the windows, air flues with regulating valves, which open through the wall into the outer air. There are two open fireplaces, one on the north side replacing a north window, one at the west between the west windows. In the mantelpiece there is an aperture leading to the ventilating shaft which surrounds the flue. This shaft is constructed of Jennings's patent flue-pipes. The ward is built over an excavated cellar, 9 feet deep. The joists are plastered on the under surface, with pugging between them. The flooring is of 1-inch deal, with ⅜-inch wainscot-oak laid upon it; the latter dowelled and side-nailed. A slight current of air passes between the plastering and the pugging, and also between the pugging and the double floor.

The spaces on the floor under each bed are covered with white glazed Minton's tiles, with a glazed red border. These tiles are bedded in Portland cement, which rests on a bed of concrete laid in between the joists. Any moisture therefore spilt under the bed will lie upon the tiles, and may easily be wiped off the polished surface. Between the bed-places the floor is, as elsewhere, of wainscot, the tiles not projecting beyond the edge of an ordinary bed, that they may not be stepped on by patients leaving their beds.

Two bed-spaces are placed between each window, and every patient is separated from his neighbour by 3 feet on one side, and by 4 feet 2 inches on the other, and has a window at the head of his bed. From foot to foot of the beds on opposite sides are 13 feet 6 inches, allowing 6 feet 6 inches for the length of a bed.

The walls and ceiling are of cement, polished so as to prevent any noisome exhalations from lodging there. The tie-beams are of varnished deal. There are no ornaments or mouldings on which dust can rest.

Besides the north and south windows there are two west windows, one on either side of the fireplace. Every patient in the ward can look, if he will, down the garden in summer, and in winter upon the open fire.

At the south-west angle is a bath-room and a lavatory, also lined with polished cement. At the north-west there is a double closet, separated by a passage, and a urinal, all thoroughly ventilated. The bath-room and the closets are separated from the ward by swing doors, and outside these is a warm-air flue from the hot-air apparatus. There are provisions for water supply on the self-acting process. The nurse's room to the east of the ward looks down the ward, but does not open into it. Beyond the nurse's room is a scullery, with a small room for occasional cooking.

The drains from the new wing are, of course, external to the building; that is, in the case of every closet they are detached from the main walls, and also leave the building at the nearest convenient point. They are made of 4-inch glazed pipes, jointed with Portland cement, and bedded in clay. They unite with a 9-inch drain, similarly laid, and this passes into the city system to the west of the infirmary. Man-holes are provided at two points of the main drain; and at the same points charcoal ventilating shafts will be added, according to a plan recommended by Mr. Rawlinson, engineer to the Health Department of the Privy Council.

A separate morgue, an inspection-room, and a small waiting-room for the friends have been fitted up in a convenient spot near the entrance.

The cost of the works up to the present time is calculated at about 5,350*l.*; to which must be added 720*l.* disbursed by the former committee. The total sum spent, therefore, is about 6,070*l.*, against 6,994*l.* total receipts.

The design for the new buildings was obtained in competition, in the autumn of 1861; Mr. E. G. Bruton being the successful competitor. Mr. W. C. C. Bramwell was subsequently associated with Mr. Bruton in the direction and superintendence of the work, which was done by Mr. Joseph Castle, the contractor.

BETHNAL GREEN.

OUT of evil good often comes; and we hope that this may be the case at Bethnal-green, and that the mischief which has been exposed will be of advantage not only to the poor of this parish, but to those resident in other districts. The shame which has fallen on Bethnal-green in consequence of the bad sanitary conditions which have been allowed to exist there, has moved the authorities of other districts to increased exertion, — at any rate, for the present.

After repudiating the need of sanitary improvement, and treating with doubt and insult those who brought cases of wilful poisoning before the coroner's inquest, the vestry of Bethnal-green saw their mistake, and have begun to consider the best means of removing the nuisances which exist in that parish. After what has passed, we looked doubtfully at the ability of the vestry to deliberate on sanitary matters in a useful way. However it has been resolved that a chief inspector of nuisances should be appointed, at a salary of 80*l.* a year. If a chief inspector be paid only a trifle over 30*s.* a week,—a sum less than the wages of a journeyman stonemason or bricklayer,—the income of the other inspector must be much less than that of the chief; and it becomes a question well worth consideration if it can be expected that men of the right kind can be found to fill, in an effective and independent manner, the duties of this responsible office. In fact, it is no question at all.

In Bethnal-green district there are 760 statute acres: the number of inhabited houses is 14,812; and the population 104,924, consisting for the most part of very poor people, many of whom live in dilapidated, undrained houses, which require the greatest care. It is, therefore, perfectly ridiculous to suppose that even two men of the most able and energetic character could, when so much is to be done, effect any considerable amount of real good. In order to do real good, houses should be inspected time after time. When an order has been made for improvement, watch should be kept that it is thoroughly carried out; and, as regards dilapidation and dirt, care should be taken, after a place has been put in good condition, that it is not allowed to lapse into its original state. But we feel certain that no effectual benefit will be derived from the inspection of parish officers. In connexion with the city of London, which contains many parishes, the sanitary inspection of the whole is under a central authority, who acts in a more independent manner than do the authorities of particular districts. But in the City limits, where places of business, such as banks, warehouses, the houses of tradesmen, &c., do not contain so large an extent of poor population requiring sanitary attention as does Bethnal-green, Dr. Letheby has found it necessary to have the assistance of five general inspectors,—one common lodging inspector; two inspectors of cow-houses and markets; one whose duties seem to have been varied; and another whose duty it is to see that all orders are carried out. By means of this staff, under the general supervision of Dr. Letheby, during the last year, within the City 9,000 inspections of houses were made. Nearly 170 houses were inspected every week. Notwithstanding, there still remains a great deal to be done in the City.

At Bethnal-green, it has also been agreed, that the Public Nuisance Removal Committee be called the Sanitary Committee, and be composed of the whole vestry; that for the purposes of general inspection, the committee shall be divided into sections, and that each ward be under the members representing it. This arrangement, if properly carried out, would be of much advantage. We have seen so many instances, however, of the failure of amateur sanitary inspection, that we have but little faith in it: for a short time there is activity and zeal, which generally soon lapses into indifference. It is, however, very satisfactory to hear, that a loan of 7,000*l.* for drainage purposes, has been negotiated with an insurance company, and that the surveyors are to be instructed to compel owners of property to drain their premises into the main sewer, if no drainage exist into any other sewer. These last-named resolutions are steps in the right direction.

In consequence of the death of another child in Hollybush-gardens, an inquest has been held, and it is most desirable that this plan should be continued in connexion with all deaths which are suspected to result from sanitary neglect. Several residents of Hollybush-place and gardens complained of the foul condition of the air, and especially of the stench which came from Mr. Costello's cow-house. Mr. Brotherton, the surgeon who had attended the deceased and two others of the children who had died from fever, notices that they had recovered from that, and then got a mild dropsy, which, in these instances, terminated in death. In the case especially under notice, the boy, six years of age, had recovered from the scarlet fever, and it was advised by the medical attendant that he should be removed. This was done; but the boy was brought home the next day, and he was soon after stricken with typhoid fever, and died in the course of twenty-four hours. Typhus had been fatal in that house some years before.

When we reported a month or two ago on the state of Hollybush-place, we expressed a strong opinion that, bad as the drainage was, the evil was largely increased by the cow-shed, and this opinion is confirmed by the evidence which was given by Dr. Letheby at the inquest. This gentleman said that, "the house in which the deaths took place was small and rather dirty. There was a strong ammoniacal smell in the various rooms from the adjoining cow-house. He was informed that odour was at times almost unendurable, and that it varied in character. Sometimes it seemed to arise from rancid grains, and sometimes from rotten dung. The rooms were very close and ill ventilated. They could only be ventilated over the shed. The latter was immediately behind the house, and was only separated from it by a shed, a few feet wide. The closet was very clean, and the water abundant, though liable to receive the effluvium from the cow-house, from which it was evident the foul smells had come principally." Dr. Letheby inspected the cow-house, and found that it was cleansed down three times a day, and that the cows were healthy. He then described the deep and uncovered grain and manure pits, from which exhalations escaped. In the houses adjoining the sheds there were the most emphatic complaints at this nuisance, and at times the odours were absolutely insupportable. "Besides which the annoyance from the flies and other insects (telltales), which swarmed, was most distressing. Such a cow-shed, with every care, could hardly fail to be a nuisance to a neighbour, and would require inspection by a proper officer at least once a fortnight. He would add that, as the habits of the animals, as well as the food made use of, were most unnatural, the milk they yielded was most unnatural."

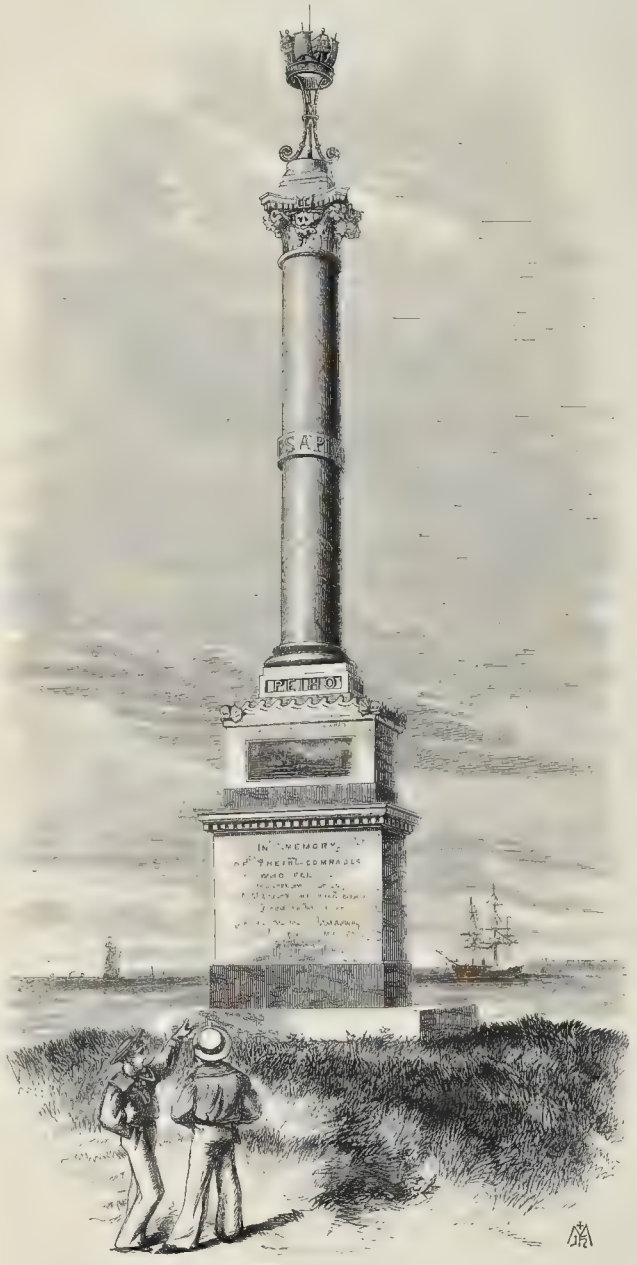
The jury in this case returned the following verdict:—"That the deceased died from typhoid fever, accelerated by bad air and bad drainage; and the jury recommend that the grain-bins and manure-tanks, and water-butts should be covered over; that there should be a numerous staff of sanitary inspectors employed by the parish authorities; and the authorities be requested to communicate with local authorities, and the Secretary of State."

THE WEDGWOOD INSTITUTE COMPETITION.

WE gave the judges' report on the designs sent in our last. The names of the successful competitors have since been declared, and are as follows:—

1st premium, Robert Edgar and John Kipling; 2nd premium, Mr. De Ville; 3rd premium, John Ladds; 4th premium, Edward Power. The following obtained honourable mention:—Samuel Cuthbert Rogers, James Lessels, and Harry Green. Mr. R. Edgar is an architect, late of Stoke; and Mr. J. Kipling is a modeller at Messrs. Pinder, Bourne, & Hope's manufactory, Burslem.

The committee met in the Town Hall last week, and made arrangements for the exhibition of the designs, and for seeking subscriptions, so as to ensure their proceeding with the work with as little delay as possible.



SIR,—Will you allow me, in refereuce to that portion of the judges' report which says, concerning my design, "the combination of cornice and window in the upper floor is decidedly inconvenient,"—to state that the upper floor has no windows; but in the inter-brackets of the cornice there are *panels of blue bricks*, and they must have been taken for *windows*. I would not thus trouble you did I not feel that, had windows occupied the position of the panels, the combination (considering the internal levels) would have been *atrocious*.

THE AUTHOR OF DESIGN MARKED WITH THE HEARTSEASE.

WHY SHOULD THE NEW PALACE OF JUSTICE BE DELAYED?

IT is so far satisfactory to notice that the Lord Chancellor has, on the earnest appeal of several members of the bar, given instruction for the alteration of some parts of the Bankruptcy Court, in Basinghall-street, during the remodelling of that inconvenient, and, for its purpose, most unfit building. We fear, however, that after all, both counsel, clients, judges, and every one concerned, will have but a sorry time of it; and that when a large sum has been expended upon the general alterations, it will be found that the premises are still insufficient for the proper and decorous management of the extensive business of this court. As regards the great building for the new courts of justice, the money for the purpose is ready, there is no difficulty respecting the site, and the design has been determined upon. Sooner or later this work must be carried out. Why, then, when all the circumstances are favourable, delay, and continue, year after year, to spend money on alterations which will for the most part be wasted? When looking into some of the apartments of the Bankruptcy Court not long since, we were disagreeably conscious that in their densely crowded and disorderly condition, the air, particularly on a damp day, is not much purer or better than that to be met with in the hovels of Bethnal-green.

ST. PATRICK'S CATHEDRAL, DUBLIN. — Up to the present time, Mr. L. B. Guinness, the brewer, has expended 110,000*l.* in restoring this cathedral. The total cost of the restoration, which will be wholly defrayed by Mr. Guinness, will probably amount to 150,000*l.*

THE CHESAPEAKE MEMORIAL, CLARENCE ESPLANADE, PORTSMOUTH.

MESSRS. WILLSON & NICHOLL, ARCHITECTS.

THE "CHESAPEAKE" MEMORIAL, PORTSMOUTH.

We have engraved a view of the Memorial column which has been erected on the Clarence Esplanade by Vice-Admiral Sir J. Hope, K.C.B., and the officers and ship's company of the *Chesapeake*. The memorial consists of a column, of a free Romanesque treatment, with plinth and sub-plinth resting on a pedestal, the summit being ornamented with a naval crown of gilt bronze, elevated on a tripod, also of bronze. The height of the monument, from the top of the raised mound to the summit of the crown, is 25 feet. The sculptured capital, the base and band of the column, the sub-plinth, and the die of the pedestal and the step, are of Portland stone. The base of the tripod and the cornice and plinth to the pedestal are of the grey Forest of Dean stone. The shaft of the column is in red Aberdeen granite, polished, and the plinth is of grey granite, also polished. The plinth has on it a representation in bronze of the attack on the Taku forts. The sculptor who executed this portion of the work was Mr. T. Phyffers. The north face of the pedestal bears the following inscription:—

IN MEMORY
OF THEIR COMRADES,
WHO FELL IN BATTLE,
OR DIED FROM DISEASE AND ACCIDENT,
DURING AN EVENTFUL COMMISSION OF FOUR YEARS,
THIS COLUMN WAS RAISED
BY
VICE-ADMIRAL SIR JAMES HOPE, K.C.B.,
THE CAPTAIN, OFFICERS, AND
SHIP'S COMPANY,
OF
H.M.S. "CHESAPEAKE."
1862.

The central band on the column is of Portland stone, with the word "Chesapeake," in ornamental letters, carved thereon; and on the moulded base of Portland stone standing on the plinth, are the words Peiho, Calcutta, Jeddah, and Pekin, raised on each face. The stonework was executed by Mr. G. P. White, of London, from the design and under the superintendence of Messrs. Willson & Nicholl, architects.

THE CLARENCE HOTEL, DOVER.

This edifice, of which we give an illustration, has been undertaken by the directors of the Clarence Hotel Company, in Dover, to accommodate the increased demand which has arisen in that favourite watering-place.

The site purchased by the company is freehold, in the centre of the most fashionable part of the town; and it is anticipated that this establishment will be frequented by the resident visitors, in contradistinction to those who simply pass down on their way to the Continent, to whom the Lord Warden Hotel would give accommodation.

The new station of the London, Chatham, and Dover Railway, in close proximity to the hotel, renders its position still more eligible than it would formerly have been.

The property purchased exceeds one acre in extent, and the grounds have the advantage of possessing well-grown trees, which will be carefully preserved; and it is considered that the association of trees and ornamental grounds with a marine hotel will be an attractive feature in the scheme.

The hotel itself is a fair example of the large structures having similar objects which are now rising up on all hands, and which appear to have taken a firm hold of the sympathies of the investing public in this country, and promise to afford ere long the same comfort in travelling which heretofore has only been found on the Continent and in America.

The Clarence Hotel has been designed with a view to comfort and convenience rather than to grandeur or show. The structure is to be thoroughly substantial, and so arranged that suites of rooms can be converted at pleasure into a private house, and, when not so required, available in the ordinary way as distinct rooms. All the modern necessities of joint-stock hotels are provided in the shape of hydraulic lifts for food, luggage, and passengers, the newest appliances of bells, speaking-tubes, and apparatus for cooking, heating, washing, &c. The corridors and staircases are built of incombustible material. The building will contain about 160 rooms in all, including a coffee-room, 55 feet by 30 feet; a ladies' coffee-room, 45 feet by 22 feet, with a conservatory for it leading to the garden; billiard-room; fourteen private saloons or dining-rooms, and ample domestic offices.

The hydraulic machinery will be worked without cost by an ingenious arrangement in using the head of water supplying the various cisterns from the great tower in which the main cistern is placed.

The corridors and apartments will be warmed by circulating hot-water pipes; and the ventilation of each room is provided for and finally disposed of by means of distinct flues, which are excited by contiguity with the hot flues from the stokery, kitchen apparatus, laundry, &c., so that an effective and constant supply of pure air is always in motion.

The cost of the building, including the cooking and warming apparatus, will be about 50,000*l*. The design is by Mr. Whichcord, architect, under whose supervision it is to be carried out. The first stone is to be laid on the 29th instant.

THE CLARENCE HOTEL, DOVER.—MR. WITHERDEN, ARCHITECT.

WATER FOR LONDON.

Finding the question of the water-supply to e Metropolis again occupying attention, I hand n some details that may interest your readers. Although the supply was calculated at 10,140,500 bic feet per day, or at the rate of 30 gallons per ad per day of the population, yet it was notorious at there were in London 70,000 houses, occupied more than half a million persons, that had no pply whatever.

The 30 gallons per day to each individual were us shown to be practically a fallacy. Yet, were true, certain essentials would still be lacking.

The metropolis wants water, but good water, eet and wholesome, not diluted mud and sewer ffuse; as it is notorious that on all the tributaries the Thames the cottage privies stand over the reams; the hog-styes and dunghills drain into em; the Thames itself, in its course of 160 miles, ceives the refuse outpourings of 223 cities, wns, and villages; to say nothing of the various per-mills, iron-works, gas-works, and other jectionable places that discharge their refuse to the Thames and its tributaries. I also con-der the manner of distributing the water-supply London objectionable. I believe the water com-nies insist upon *leaden* pipes being used, which nst seriously contaminate the water in passing rough them; indeed, in the system of an inter-ittent supply, in some cases the water must and for days in the leaden pipes.

Then there are the cisterns, an indispensable rangement to an intermittent supply. Any rt are highly objectionable, as their situation revents their being frequently examined or eaned, and they are generally receptacles for bbish and filth; and if out of doors, in summer me, you have your water lukewarm out of em, and sometimes a rapid aquatic vegetation curs.

Analyses of water engaged the attention of the eat chemist, Berzelius, during some of the tter years of his life. He found it impossible divest water, once contaminated by human ecreta, of its noxious principles.

The mischief of all impure water is what is in olution: the impurities in suspension can be echanically arrested, and that is all the filtering-eds of the water companies can effect; but they o not do all that can be done by them even in at matter.

The inhabitants of London require a soft, as ell as a pure water; for it was calculated twelve ears ago that 12,000 tons of soap per year were sed, which, at 50*l.* per ton, amounted to 600,000*l.*; hereas, had the water been soft, 3,800 tons ould have sufficed, which, at the rate of 50*l.* er ton, would have only amounted to 190,000*l.*; r, in other words, 100 gallons of London water equired 30 lb. of soap, to make a sufficient ather, and the same result was obtained with 100 allons of softer water with 9½ lb., which is about 00 per cent. in excess.

Since the reports of the Health of Towns Commissions a few years back, many schemes have een put forward with a view to a pure and effi-ient water-supply to the metropolis. Artesian rells, distant lakes, and streams were spoken of s available sources; but of course the water com-panies' influence raised objections against every plan as unfeasable.

Forcible objections must be urged against in-reasing the already too numerous associations of rresponsible companies. One great controlling dministrative authority appears to be the essen-ial principle of true sanitary reform.

In some towns, where the waterworks belong o the Local Board of Health, they wash down he footways, streets, courts, alleys, and even he fronts of the houses where requested to do so. What a boon such an arrangement would be to he narrow alleys and close courts of the metro-polis. I find it is calculated to require one gallon of water to wash one superficial yard of a paved court, alley, footway, or street.

In dry hot weather, it is the practice of some ocal boards of health to flush their street-gullies and sewers, which is a very excellent plan; but it is almost out of the question in the metropolitan district, although very necessary, as a district surveyor informs me 10*s.* per hour is the price charged by the water companies for drawing a fire-plug to let the water run for that purpose.

I am of opinion that the present water-supply of the metropolis is as deficient in quantity (to the sanitary requirements) as in quality. And, with all our advances in engineering and sanitary science, it must be admitted that the water-supply to the metropolis is miserably deficient: in fact, it is a disgrace not only to London, but to England. Why not, by some means, raise the two millions and a half of capital that the eight companies are supposed to represent, and take the monopoly out of their hands.

I consider most of the cities in England, many in Europe and North America, far better supplied than London is with water; and the water companies being irresponsible, their servants consider they have a right to act as they think fit: they tear up roads and footways at most inconvenient times and positions, and they lay in their water-pipes so shallow that a sharp frost stops the supply even in the main pipes, which is a serious oversight, and plainly shows they do not pay sufficient attention to the practical part of their business. I will not assume them to be so penurious as to assert that it is done to save expense to the company, to the serious inconvenience of the consumers at such times, as many can recollect that during the last severe frost no water ran through the pipes for several weeks.

I hand you a few memoranda of the different water-supplies in England, Europe, and North America.

London Water Companies in 1850.

	Supplied in million gallons. per year.	Gallons. per house pr.day	At a cost to company per million gallons. £ s. d.	Degree of impurities per gall. in 1863.
New River	5,373	174	9 17 4	17·75
East London	2,256	143	6 7 7½	21·08
Southwark* ...	1,820	143	5 9 4	18·80
West Middlesex*	1,109	124	16 9 7	14·24
Lambeth*	913	107	15 0 6¾	18·36
Chelsea*.....	1,304	170	19 10 4¾	16·44
Grand Junction*	1,127	220	9 14 6¾	17·48
Kent.....	323	98	17 2 10¾	25·88
Hampstead.....	145	89	22 5 7¾	

The total supply by all the nine companies for street watering, flushing sewers, and fires, was estimated at 16,748 millions of gallons per year at this date, 1850.

There are many other cities and towns in England that are well supplied with water, of which I have no memoranda; but I am convinced that London is very far behind them in the water-supply.

The Roman water-works were splendid, and ought to shame modern Europe:—

Aqueducts.	Length.	Galls. in 24 hours.
Appian, 312 B.C....	10 miles	27,724,181
Old Anio, 273 B.C...	36½ ,, ...	66,813,887
Maician, 146 B.C. ..	57 ,, ...	74,249,917
Pepulan, 127 B.C. ...	14½ ,, ...	6,756,385
Julian, 35 B.C.		18,321,407
Virgin, 22 B.C.	14 ,, ...	38,040,467
Alsietina, 14 A.D. ..	20 ,, ...	5,625,016
Claudia, 49 A.D....	42 ,, ...	95,958,991
New Anio, 90 A.D...	54 ,, ...	71,979,127
Total		376,834,379

Some auxiliary feeders made the total length of aqueduct at the period to exceed 255 miles in length. The Pont du Gard aqueduct, 30 miles in length, was in use four centuries; and, after the lapse of fourteen centuries, so excellent was the construction that it could be restored without considerable outlay.

The Versailles aqueduct is 98 miles, and out of it there are 13 miles of tunnel; the Versailles and Marli aqueduct, is 4,400 feet long and 200 feet high.

Iron pipes are much inferior to masonry for the conveyance of large quantities of water, to say nothing of the danger and inconvenience in case of bursting.

The Croton aqueduct and water supply to New York are a grand piece of engineering, 40½ miles in length; the cross section, 53.34 feet in area, capable of conveying thirty million gallons per day. There are also above 180 miles of pipes, varying from 36 inches to 4 inches in diameter, laid through the city, to distribute the water supply: the receiving reservoir is about 35 acres, and usually holds about 150 million gallons. The distributing reservoir is about 4 acres, and holds about twenty million gallons. Cost of the water-works, 8,575 thousand dollars; cost of the distributing pipes, 1,800 thousand dollars.

The Fairmount waterworks supply the city of Philadelphia through 97 miles of iron pipes. The daily consumption, in 1848, was 4,275,352 gallons: 2,418,016 gallons was the supply to London (see table). Boston has also an aqueduct supply, but of those works I have no information, although my relatives resided there for many years.

There is plenty of water which could be stored to supply London by gravitation. I am decidedly opposed to pumping by steam-power. The ancients supplied Rome by gravitation, and that is the proper way to supply London. Any of your readers that may be interested in this matter will find some valuable information in several Government blue books.

Anti-Monopoly.

* River Thames companies.

SANITARY STATE OF ST. GILES'S.

The annual report for 1862, on the "Sanitary Statistics in St. Giles's District," by Dr. George Buchanan, medical officer of health for the district, has been printed. It states that the mortality of London and of the central districts being high during the year, the death rate of St. Giles's was of course also in excess. In 1862, the large number of 1,563 deaths occurred amongst residents in St. Giles's district. This number represents a rate of 28·9 per 1,000 inhabitants, being a considerable increase above the death rate of any recent year. There was, as usual, a large excess of deaths among males, 814 of them having died to 749 of the other sex. Fifty-four of 80 hospital deaths were among males. The average age at death was 27 years and 10 months. Four hundred and seventy-six infants died before they were two years old, and 191 others between the age of two and five. Forty-three out of every hundred deaths, therefore, were those of children under five years old. The high mortality of St. Giles's in 1862, resulted firstly, from a small excess (5·5 per cent., and less than the average excess of former years) in the class of miasmatic or contagious disease, of which typhus fever was the only member contributing an exceptional mortality above other districts. Secondly, from a large excess (47·8 per cent.) in the important class of consumptive disorders. Thirdly, from a great excess (54·3 per cent.) in the equally important group of lung diseases, acute and chronic; and, fourthly, from a great excess (65·8 per cent.) in such children's diseases as are not comprised in the foregoing classes. The causes of the diseases thus in excess are to some extent such as public sanitary measures can deal with, but are to a greater degree dependent on conditions of exposure, destitution, and ignorance, that cannot be dealt with directly by the officer of health. The continually deteriorating state of the courts about Little Coram-street is believed to have had the main share in the increase of mortality, and it is to be feared that this increase will continue until some thorough sanitary improvements are here made. The Coram-street neighbourhood has already attained the evil distinction of being bracketed with Southern Drury-lane in its mortality.

THE ARCHITECTURAL ASSOCIATION.

The ordinary meeting of members was held on Friday, the 27th ult., at the House in Conduit-street. The chair was occupied by the president, Mr. T. Roger Smith.

The following gentlemen were, on ballot, elected members of the Association:—Mr. R. Almond, 11, Kingston Russell-place, Oakley-square; Mr. William Duke, ditto; Mr. James Hunt, Kentish-town; Mr. Frederick Morley, 33, Asker-street, Brompton; Mr. H. T. Keates, 20, Acton-street, Gray's-inn-road; Mr. John Henry Ion, 4, Albion-street, Hyde Park; Mr. John Codd, 105, East-street, Manchester-square; Mr. Edwin Penn, 14, Wilmot-street, Camden-town; Mr. Henry Blackwell, 35, Argyll-street, Argyll-square; Mr. Henry Barr, 126, Marylebone-road; Mr. A. G. Thompson, 4, Upper Gower-street; Mr. C. R. Hancock, 2, Dorchester-place, Blandford-square; Mr. A. C. Cuming, 10, Albert-street, Camden-town; Mr. Henry Burt Russell, 8, Adelphi-street, Strand; Mr. Thomas Dickson, 3, Paynter-street, Poplar; Mr. H. Kreisq, 7, Stratford-place, South Pimlico; Mr. John McLeod, 1, Featherston-buildings, Holborn; Mr. Thomas Farrer, 25, Hamilton-street, Camden-town; Mr. J. H. Leonard, Torrington-square; Mr. G. Buxton, 4, Warwick-court, Holborn; Mr. Charles Brooks, 8, Parliament-street; and Mr. T. E. Munday, 40, Ellington-street.

Letters of resignation were read from Mr. Walter Paris and Mr. Moleccy, members of the committee, on the ground that they had accepted appointments abroad. Mr. Florence and Mr. Arthur Smith were recommended as their successors on the committee, subject to election at the next meeting.

Mr. Florence and Mr. J. Johnson were also nominated to be secretaries to the class of design.

Mr. C. J. Adams, hon. sec., read a report of the operations of the Association for the year 1862-3, and also the cash account.

After some discussion in reference to the latter,

in which Mr. Paraire, Mr. Rickman, Mr. Ridge, and other gentlemen took part, the report and abstract of receipts and expenditure were received and adopted.

Mr. J. Tarver brought up the report on the class of design, which stated that 167 drawings had been contributed by twenty-nine members and that the average attendance of students each evening was fourteen.

Mr. Lewes read the report of the Library Committee, and Mr. J. Johnson brought up that on the modelling class. The latter contained an expression of regret that so limited a number of members had availed themselves of its advantages. It also stated that, as a consequence, the class had been closed.

The Chairman observed that the class of design and the voluntary architectural examination class had, no doubt, absorbed a good deal of time and attention, but that he hoped the modelling class would be revived at a more opportune moment.

The report on the voluntary examination class was brought up by Mr. Ridge.

Mr. Rickman read the report of the delegates appointed to attend the annual meeting of the Architectural Alliance, held in London on the 1st of July last.

The report was ordered to be referred to the committee.

After some other routine business,

The Chairman announced that the next subject for the class of design would be an open timber roof; and that on the 11th instant the prize essay on vaulting and groining would be read. If time permitted, the meeting would then resume the adjourned discussion on Mr. Darbishire's paper on the construction of workmen's houses.

CHURCH-BUILDING NEWS.

Notting-hill.—On Friday in last week, the Bishop of London consecrated another of several new churches which have been erected within the last few years in the daily-extending parish of Notting-hill, and which, we understand, is but the forerunner of two or three others to be built in the new districts assigned for them, within a short period. The edifice is situate in the new district called St. John's, within a short distance of the Metropolitan Rifle Ranges, Wormwood Scrubbs. It is dedicated to St. Mark. Mr. E. Bassett Keeling is the architect.

Islington.—On the 25th ult., the foundation-stone of St. Michael's, Islington, was laid by the widow of the late Mr. John Randell, who had left a piece of ground, 160 feet long by about 90 feet in width, for its site, near the Great Northern Railway, and had endowed it with an income of 200*l.* per annum, arising out of the freehold ground-rents of thirty houses in that neighbourhood. A large portion of the funds for the building have been collected by subscription, to which the Randell family have very largely contributed. The church is designed by Mr. R. L. Roumieu, architect; and the builders are Messrs. Dove, Brothers. The church will contain 750 sittings, with capabilities for future enlargement.

Lee (*Kent*).—The new church of Holy Trinity, erected at Lee by Mr. Lewis Glenton, of Blackheath, at a cost of 10,000*l.*, has been consecrated by the Bishop of London. The church is built of Kentish rag stone, in the Gothic style, from a design by Mr. S. Barber, of London. It contains a stone pulpit, coloured glass windows emblematical of the most marked events in the life of our Saviour, and is internally decorated.

East Lavant (*Sussex*).—The church of the village of Lavant has been restored, added to, and improved, under the directions of Mr. G. M. Hills, of London, architect. The building was very incommodious and in a very dilapidated state. The works have been executed by Mr. Blaker, builder, Littlehampton. The west door is preserved in the restoration. To the arcade on the north side of the nave has been added another arch at the west end, thereby opening up to the church a part of the aisle previously shut off by a dead wall. An entire new chancel arch has been made in the original east wall of the early church. The arch opening into the tower on the south of the nave has also been reconstructed in stone, instead of the rude brickwork which was found there. The flat ceiling of the nave has been taken out, and a ceiling of the waggon-head form introduced; and, instead of the dormer windows which existed in the roof, stone windows have been inserted on both sides of the church. The only ancient window of the nave that appeared until the plaster was removed from the walls is still preserved above the west door, being an insertion of the fifteenth century. On the removal of the plaster a little window was discovered on the south side of the nave. The new aisle windows were designed after a small one which was found there: they are of the lancet period. In the chancel the old roof, with its flat ceiling, has been removed, and a roof, with arched timber braces and open timber work, constructed. A wooden window at the east end has been replaced by one of stone—a traceried window of three lights. In refitting the chancel six ancient oak stalls have been preserved, and are placed against the north wall, with their tabernacle work of oak above them. The new seating generally is executed in deal stained and varnished, all being low open seats.

Priors Marston (*Warwickshire*).—Priors Marston church has been reopened. The restoration has comprised an almost entire rebuilding of the nave and aisle with new roof, stone pulpit, and stalling throughout. A memorial font has also been presented, consisting of Bath stone, surrounded by alabaster columns, and having an incised inscription round the edge. The whole work has been completed by voluntary subscription and the sale of old materials, its cost falling little short of 1,000*l.* The architect was Mr. Joyce, of Stafford; builders, Messrs. Lilley & Elliott.

Pershore (*Worcestershire*).—The restoration of Pershore Abbey Church is going on, and the church is now being reseated. The pinnacles have been completed. They counteract the lateral thrust of the vaulting of the choir. The exterior of the choir, side aisles, N.E. and S.E. transepts and chapels, have been repointed, and the defective mouldings and ashlar restored. A damp-proof course of concrete has been placed round the building, with a Forest of Dean kerb, to take the surface-water into drains (constructed of glazed stoneware pipes). Gas-pipes have also been laid down. The vestry is to be formed by a screen towards the south end of the south transept. The font will be placed under the first bay in the south transept. The old organ is to be reconstructed and adapted for its new site, in the N.E. chapel. The amount of liabilities to the present time, to be provided for by the committee, is 5,051*l.* 16*s.* 6*d.* This includes Messrs. Collins & Co.'s contract, 3,630*l.*; architect and clerk of the works' charge, 410*l.*; Messrs. Haden & Co.'s tender for warming, 160*l.*; removing and refixing organ, 50*l.*; besides new seatings, stalls, gas-pipes, encaustic tiles, iron palisading, and many other incidentals. To meet the total present liabilities, the sum of 4,714*l.* 1*s.* 5*d.* has been raised, and the interest of money deposited at the bank has accumulated to nearly 100*l.*, leaving a deficiency of but 343*l.* 15*s.* 1*d.* A few items remain to be provided for which had not been taken into the account, such as pointing the south transept, providing moveable seats for the middle aisle, pulpit, gas-standards, and re-opening the lantern-tower. No estimate of the cost of this item has yet been handed in by Mr. Scott; but it is probable that, including the deficiency above named, a total amount of some 800*l.* or 900*l.* will have to be raised beyond the present amount of subscriptions. The former curates of the Rev. Dr. Williamson have consulted Mr. Scott, the architect, as to a testimonial of their respect for the Rev. Dr.; and he suggests that they should provide a fresco, to fill the blank bay above the chancel arch, and which was evidently so occupied in former times. They have made preliminary inquiries of Messrs. Clayton & Bell, whose reply being satisfactory, Dr. Williamson has been informed of the intention, and has approved of the design.

Charlton Horethorne (*Somerset*).—St. Peter's Church has been re-opened after restoration and repair. The church consists in plan of a nave with north and south aisles, south porch, chancel, and western tower. The restorations were begun by placing a new roof on the chancel, re-seating the entire area of the church. The roof is constructed in the same manner as the nave, *i.e.*, boarded to a circle, and divided into panels by ribs with carved bosses. The seats are all open, and are of oak, the panels of bench ends being of pitch pine. A new reredos, of Bath stone, has been placed in the chancel. In the course of the restoration it was found necessary to entirely rebuild the whole of the south arcade, south aisle, and porch. The type of the north arcade was followed, but the details varied. The carved heads under the corbels represent the Prince and Princess of Wales. The old door and windows were reinserted; and the old roof, together with those of the north aisle and nave, repaired. The earth which had accumulated against the walls is removed, and a drain formed round the church. One of the windows in the chancel has been filled with stained glass, the gift of the vicar, the Rev. J. F. S. Phabayne; and the east window of the north aisle has been also filled with stained glass, by the Rev. W. M. Church, and represents the heraldic bearings of the Hussey family. Both these windows are by Messrs. Clayton & Bell. The contract for the whole of the works was taken by Mr. Clarke, of Bruton. The carving of the reredos, pulpit, and seats was executed by Mr. Forsyth. Mr. William Slater was the contractor.

Doncaster.—It has always been said, remarks the local *Gazette*, that a mistake occurred in the building of the bell-turret and spire of St. James's Church, and that it was not done according to the intention of Mr. E. B. Denison, who gave the general design. However that may be, the former spire was a decided failure, both in shape and proportion, and had a mean appearance, quite at variance with the general character and size of the building. At last Mr. Denison determined to pull it down and build a larger one at his own expense, and from his own design. The walls below fortunately afforded a proper basis for it. The new spire being 13 feet wide instead of 10 feet, and 120 feet high instead of 95 feet, is of more than double the bulk of the old one. It is also of more decorated construction, having eight deeply recessed belfry windows, with numerous shafts and carved capitals, and the ball-flower ornament round the cornice, and eight gargoyles at the rise of the spire from the octagon, which is ornamented with diaper bands like that of Salisbury. Mr. Denison has also thrown an arch, 32 feet high, over the vestry at the west end of the church, and thereby got rid of the long straight edge of the tower which ran from the floor to the roof. The work is now completed. The cost is about 860*l.* altogether. Mr. Teale, of Doncaster, has been the architect; and Mr. Athron, the contractor. The stone is from Ancaster, the same as the church is built of.

Aberdeen.—St. Mary's Church, Carden-place, is now approaching completion. It is built principally in the Middle Pointed style of Gothic architecture, with some of the details partaking of Italian and Scottish character. The building consists of nave, quasi-transepts, and chancel, the latter being flanked on the north and south sides by small circular-sided buildings projecting therefrom, the one on the north side forming a vestry, and that on the south side to contain the organ. Underneath the chancel is a crypt, the ceiling of which is supported on pillars, and groined, on which again is formed the floor of the chancel. The nave is divided into five bays by the clerestory windows, which are alternately circular and coupled lancets—three circular and two pairs of lancets on each side. All the windows in the church are in the clerestory of the side walls, and the circular windows in gables considerably higher up; the light entering the church being kept as high up as possible. The circle being the predominant figure throughout, the circular windows are filled in with plate tracery, each window having a large circular opening in the centre, and seven smaller ones round the large circle, and small apertures of circles or trefoils on the outer circumference give variety. The west gable is stepped to the line of the roof, and shows the largest circular window, 14 feet in diameter: on either side of this is a small circular window below, in line with clerestory windows. This gable is divided into three divisions, by flat piers running high up into the gable, the centre division containing the large west window, and the principal doorway underneath. The transepts externally present each a large circular window, 12 feet in diameter, with four lancets underneath. The chancel has four lancets on each side of clerestory, and in each of the three faces of the hexagonal apse at the east end is a circular window, surmounted by a small stepped gablet, carrying crosses. At the junction of the ridges of the roof over the centre of the transept, a large ornamental spirelet is formed, octagonal in plan, the lower part of varnished wainscot. The chief features of the outside are brought out by the use of different coloured materials, the architecture being kept up in general of a more than usually severe character. In the masonry, which is rubble-granite, the parts are marked by the use of bands of red and white freestone and black granite. These stones are also alternated in the formation of the circular and other windows and principal details throughout. The whole length of the church inside is 123 feet. The nave, including transept, is 90 feet long, 36 feet 4 inches wide; 30 feet high from floor to top of side walls, and 60 feet high from floor to apex of roof. The chancel is 22 feet wide, and 33 feet 6 inches long; side walls, same height as

ave, and from floor to apex of roof, 53 feet. The oint of the cross on the spirelet stands 112 feet bove the ground. The glazing in the nave nd transepts is of tinted glass, in geometrical atterns; that in the chancel of geometrical esigns in painted glass, and the east window of igure subjects. The church will accommodate etween 700 and 800 persons. A painting of the rucifixion will be placed above the altar; and here is a great amount of incised work, encaustic iling, and inlaid work, &c., to be yet finished. The architect is Mr. Alexander Ellis, of Aberdeen.

Piltown (*Waterford*).—The new church at Bessborough Park, Piltown, which has been some ime in course of construction, according to the plans of Mr. G. W. Street, late of London, under he contract of Mr. J. Fitzpatrick, of Waterford, n Ireland, is now completed. The nave is 62 feet ong by 33 feet wide, and is seated to accommodate about 298. The seats are low, open, and nade of Memel wood, stained, the ceiling being lso open work of the same material. The height f the church is about 42 feet, and the chancel neasures 23 feet long by 17 feet wide. The walls re bare, but pointed, the stones for which, viz., granite limestone and grey marble—were all furnished from the estates of the Earl of Bessborough, who gave the site. There is a circular racery window over the main entrance, which, with six small ones immediately below, and three indows each side of the nave, provide light for his portion of the building, the chancel being urnished with one main and two side lights rought from the old Fidown church. The cost f contract and architect's fees amounted to about 1,400*l.*,—800*l.* of which are forthcoming by the Ecclesiastical Commissioners. The earl's under gent, Mr. Richardson, superintended the erection s overseer of work.

THE FALL OF HOUSE IN ISLINGTON.

On Monday last Dr. Lankester, the coroner for entral Middlesex, opened an inquiry at the Lansowne Arms, Islington-green, into the circumtances attending the deaths of John Peake, arpenter, and Joseph Pearce, carpenter, who lost heir lives consequent on the falling down of the remises in Upper-street, Islington, in which they ere at work, known as the Wheatsheaf publicouse, in course of rebuilding.

Mr. Layton, vestry clerk of Islington, attended behalf of the parochial authorities; Mr. Tindal tkinson, barrister, on behalf of Mr. Chapman, the uilder; and Mr. Bradlaugh, solicitor, on behalf of r. Williams, the architect.

The room, though large, became so crowded hat the coroner suggested an adjournment to the usic-hall of the establishment, which was at once ceded at the disposal of the coroner by the proietor.

Evidence was then taken. In the course of it, r. John Baker, Hatton-garden, a retired builder, pposed that he was passing in front of the preises on Thursday morning last. While doing so was alarmed by a sudden fall of bricks from the rner of the building, which knocked down a ild belonging to one of his friends. He at the me time heard a tremendous crash, and ran up e archway of the Hall. He then found it was e front of the Wheatsheaf that had fallen in. ere appeared to be great confusion amongst the rkmen, and some were busy in endeavouring to rticate those who were buried in the front of e building. Saw three men picked out of the bbish and taken away in a cab to the hospital. then went up the archway of the Hall to the k of the building, and saw another man taken t of the ruins and sent away in a cab. This was hour after the accident had occurred. He then w a Mr. Cuffin with some workmen in the act throwing a rope near a stack of chimneys to ll it down. Called out to them not to do so, the falling bricks would injure the men eady lying in the ruins, also the men who ere trying to release them. When the last man d been got out alive, he saw the legs of a man struding from the rubbish in the basement of house. All this time the chimneys he had ken of were thrown down, and some of the icks fell on the spot where the man was lying. gentleman who was present, and himself, then ve some workmen money to shore up the cross rtition-wall, which he thought was in a very ngerous state. The whole front of the house eared to fall bodily at once. Saw no iron bond plate amongst the rubbish that before it fell d formed the front of the house.

Mr. Hollinshead, author, said he was at the ne of the accident a few minutes after it had taken place. He saw about a dozen men digging in the rubbish at the left-hand corner of the ruins. Those men, after a few minutes, were called away by some person to assist in pulling down the chimney walls, the bricks from which fell into the basement immediately over the spot where the bodies of the deceased men were found. He then went round to the back of the premises, but finding no person there in authority, asked the workmen if any of their number were missing. He was told "Two." He then urged the men to search for their missing comrades, and at this time he heard another portion of the chimney fall or thrown down. Was not prepared to say that the falling or throwing down of this chimney wall had anything to do with the deaths of the deceased men; but thought the wall ought to have been thrown down in another direction than immediately over the place where the men were then lying.

Mr. Timewell, juryman and builder, asked if the gentlemen representing the builder and architect were prepared to submit the original plans and specifications to the jury. They might materially affect the inquiry.

Mr. Bradlaugh said he would have the specifications printed, and supply each of the jury with a copy. It was ultimately decided that the original plans should be at once placed in the hands of Mr. Dennis, the foreman, for the use of the jury, Mr. Bradlaugh undertaking to supply a copy of the specifications.

The inquiry was adjourned till Monday next.

The following is part only of a communication on the subject:—

Sir,—Inasmuch as I have never been within the building, I court the charge of presumption, when I volunteer to tell you the primary cause of the accident above mentioned. It is this,—

Brickwork made defective and every way unsound, *by insufficient* and in *principle wrongly-constructed scaffolding*, a matter over which the district surveyor has not the shadow of a right of supervision or control of any kind.

In the case under consideration the scaffold was of the ordinary kind. This was an error on the part of some one; for in all cases where work is carried on rapidly, day and night, without cessation, the scaffold should be "*an independent one.*" The true principles of scaffolding, and their modifications and adaptations, are so simple, as to make them thought unworthy of the consideration of contractors and their foremen.

I will now proceed to show how the ordinary scaffold acts as a destructive agent upon bricklayers' work, when carried up, and followed by the other trades with undue rapidity. The swag of the ladder with the men passing up and down; the action of the wind upon standards, ledgers, and boards; the effect of changes of the atmosphere upon scaffold-cords and wedges; the sway given in all directions to the scaffold by men working thereon; the using of standards and ledgers for the hoisting of materials; the fastening points for derrick guys, &c.,—these various forces act upon the putlogs. Every *weighted putlog* (and there will be some dozens of them inserted in the walls) becomes a lever, acting perpendicularly, sometimes horizontally, and, still worse, acting at times as a combination of the lever and the wedge—not only as the simple wedge, but as the folding and semi-reversed, or lifting wedge,—I say, these forces acting upon the putlogs are so many destructive agents to sound work, be it done ever so well, by keeping the work night and day in a sort of spasmodic or irregular tremour or vibration, the irregular tremour effectually destroying the adhesive properties of the mortar, and, of course, preventing its setting. Many years since I made a calculation, and I have since verified it, with a distinguished officer of the Engineers, when engaged upon similar works, by comparison of notes and observations. It is this: a plasterer running a mould, a man lifting, a carpenter "pinching along" a principal, or a labourer pulling a rafter over a ledger, becomes a destructive agent (+ his own weight) of upon the average 50 lb. + the swag of ledgers and standards, and + the leverage of putlogs.

Now, sir, suppose we have but twenty-five men thus engaged, thereby we have a destructive agent created and in constant action (as in the present case), equivalent to a force of 1,250 lb. + leverage, &c., distributed throughout the brickwork, and this force is acting *irregularly* at *regular* distances of twenty-four courses of brickwork in height, and 6 feet laterally; in fact, throughout the scaffold upon every weighted putlog, now lifting, now acting laterally, and always in the same straight lines of bond.

In conclusion, I repeat that the primary cause of the accident which forms the subject of this hurried letter was, in my opinion, defective brickwork, caused by imperfect and wrongly constructed scaffolding. The remedy in other cases is simple, viz., in all cases where the work is carried on night and day, without a chance of resting time for settling, use an *independent scaffold.*

One further suggestion. English bond is undoubtedly the best for all works, but in works carried up rapidly, it appears to me to be really essential.

P. N. W.

ARCHITECTURAL LIBRARY, SOUTH KENSINGTON MUSEUM.

Your late notices of new foreign architectural books I think will be of great use, and I hope they will be continued. The list might be much enlarged. Architects are not half alive to the importance of making themselves acquainted with books. When established in practice, they are in general content to rub along in a jog-trot way, relying on old studies and early impressions; whereas, to keep the mind fruitful, a man requires to use constantly his sketch-book and study new works. Reynolds's advice to artists generally is especially applicable to architects:—

"It is indisputably evident that a great part of every man's life must be employed in collecting materials for the exercise of genius. Invention, strictly speaking, is little more than a new combination of those images which have been previously gathered and deposited in the memory. Nothing can come of nothing. He who has laid up no materials can produce no combinations. The more extensive, therefore, your acquaintance is with the works of those who have excelled, the more extensive will be your powers of invention, and, what may appear still more like a paradox, the more original will be your conceptions."

Those who wish to see the books you have described, will find them at the South Kensington Museum Library. It has been much the fashion to abuse this institution; but I feel quite sure, if Englishmen found such a one in Paris, words would not be able to express their great admiration. The Art Library of about 9,000 volumes is especially valuable to architectural students, it being the only one we have which is generally available. The British Museum Library is virtually closed, except to those who have little to do, from the difficulty and loss of time in getting books.

The advantages of the Kensington Museum Library are, that it consists of all the principal old works on architecture and cognate subjects, and *the latest.* The books can be taken from the shelves by the student, if he likes: at all events, there is no delay in getting what he requires. The library is open daily, and on Mondays, Tuesdays, and Saturdays, *in the evening*, till ten o'clock. Tracing is permitted, and the charge is very trifling,—6d. per week, 1s. 6d. per month, or 10s. per annum.

ARCHITECTUS.

GAS REFORM NEEDED.

LONDON *v.* EDINBURGH.

Some fifteen years ago the citizens of London were in a state of civil commotion about the price and quality of gas: a new company was formed, its object being the supply of a cheaper and superior article; and having succeeded in establishing themselves, the public would naturally expect that all the modern improvements in the manufacture and materials used in producing gaslight would be resorted to by this reforming gas company; that the citizens of London would, under their wing, be supplied with the best article at the lowest price; in short, that London would take the lead in the quality of its gas, as it does in its porter; instead of which, it appears by the reports in the columns of your contemporary, the *Journal of Gas Lighting*, that we are 150 per cent. worse lighted than the inhabitants of Edinburgh. I want to know why is this? Has the new company amalgamated with the old ones, or is the Edinburgh company content with less profits? I observe also that at the general meetings of our London companies, the directors take great credit to themselves for the present prosperity of their undertakings. One chairman, evidently in blissful ignorance of the reports I refer to, tells the shareholders "*that as far as the illuminating power is concerned, nothing better could be desired than the article they supply;*" it being equal, according to his statement, to 13¾ candles; while at Edinburgh it ranges from 30 to 34 candles. Another chairman of another cheap and good gas reforming company, while addressing his proprietors, informs them, "*that their business has so much increased, as to necessitate an outlay of* 24,000*l.*

on a gas-holder that will be the finest and largest in the world," and chuckles over the proud position they will then occupy; apparently oblivious to the fact that by doubling the illuminating power of his gas, this monster gas store would not be required at all, and his gas would even then be 30 per cent. inferior to that in Edinburgh. It forcibly occurs to me that those men are in ignorance of the properties of good gas: they are not generally chosen because of their scientific attainments; but it certainly forms a part of the duty of their engineer to inform them, previously to their coming before the public, of what is really *good gas*. We would then be spared the silly meaningless episodes about the superiority of London gas, and of theirs in particular; and, although it may occasion a disappointment to the prospective vanity of the chairman last referred to, I would advise him to save the shareholders the 24,000*l*. Let him and his talented engineer run down to Edinburgh and pick up a wrinkle from the gasmakers there; ascertain how to store a quart of London brandy in a Scotch pint-pot: they will be wiser men at the next meeting of their shareholders.

The object of this letter is to direct the attention of London gas companies to the reproachful comparison of the illuminating power of the gas supplied by them, with that provided by our neighbours in Edinburgh; and, without any threat, I would suggest the propriety of a speedy improvement on their part, else they may depend on it the shopkeepers of the British metropolis will not long willingly consent to breathe a superheated, deleterious atmosphere, when, by using gas similar to that supplied to the northern capital, little more than one-third of the present combustion would afford them the same amount of light.

SHADE OF CHARLES PEARSON.

ARTISTIC NATURAL THEOLOGY.

SIR,—Permit me, through the medium of your journal, to call attention to this interesting though neglected subject. Art-writers have, indeed, for many years past, been in the habit of alluding to the æsthetic laws of Nature; but, so far as I am aware, no one has systematically investigated them, or attempted to deduce from them conclusions relative to the being and attributes of God. Dr. Paley (Griffin's edition) devotes only seven pages to the consideration of beauty in Nature, and seems all along to have lost sight of the fact that artistic is as truly a science as ordinary natural theology, and that the very instances which he adduces of utilitarian, are intimately associated with artistic, contrivance.

It will hardly be disputed that a correct, or even partial, knowledge of the artistic branch of the subject may be of great advantage to the professional architect. If he would see the principles of his art rigidly and consistently carried out, let him go to Nature. It, and it alone, is marked by an *entire* absence of sham and pretence of meretricious or defective taste. The works of God are, like Himself, infinitely perfect, bearing in mind the varied end (moral and intellectual, as well as physical) which they are designed to subserve.

They may be advantageously studied under two general heads,—1, Form; 2, Colouring,—not forgetting, of course, to view them in combination. These, again, may be subdivided into sections, *e.g.*:—

1. Fitness or utility always existing in combination with beauty; 2. Compensation; 3. Breadth and Simplicity; 4. Variety and Contrast; 5. Harmony and Gradation; 6. Expression, viewed with reference to different classes of form or modes of colouring (the theories held upon the former subject by Messrs. Alison and Garbett must, in my opinion, be accepted with considerable reservation); 7. Symmetry and Proportion; 8. The right method of Studying and imitating Nature.

Although I cannot, in a communication like the present, fully develope the theological argument based upon the facts above alluded to, it would be wrong to pass it over altogether in silence. It may be epitomised in a few sentences. That inert, senseless matter can instinctively fashion itself into forms of beauty and sublimity is a supposition at once absurd and incredible. Whenever, therefore, we meet with instances of artistic contrivance on a large scale, we at once refer them to an intelligent designer, *i.e.* the Creator himself. Then, having ascertained the benefits (physical, intellectual, and moral) which we derive from the presence of the beautiful in Nature, we proceed by an *a fortiori* argument to infer His power, wisdom, and goodness. For if such be the lesser blessings which He bestows upon His creatures, what are we to think of the greater? If the mere details of His system of moral government be so dazzlingly glorious, what must be the character of that system when viewed as a whole?

X.

THE BRICK VAULT OF ST. GEORGE'S HALL, LIVERPOOL.

SIR,—I find it reported that at the meeting of the Institute of British Architects held on the 16th ult., "Mr. Tite called the attention of the meeting to the attempt made by Mr. Rawlinson to obtain credit for having designed the ceiling of *St. George's Hall, Liverpool*." I will meet Mr. Tite on this question, with the greatest possible pleasure, for several reasons. The disappointment of Mr. Tite ought to have cooled down in sixteen years; but it appears not to have done so. How is it, however, that Mr. Tite never opened up this question before,—during the life of the late Mr. Cockerell, for instance, who was conversant with what I did and with what I claimed, as to my share in designing and in constructing the hollow brick ceiling at St. George's Hall? I did not "take office as clerk of works at St. George's Hall," as put by Mr. Tite; but, at the urgent request of Mr. Elmes, I consented to act as his representative, not only for St. George's Hall, but for the other works Mr. Elmes had at that time on hand. Mr. Moseley, Mr. Wordley, and the widow of the late Mr. Elmes are all living, as also other of Mr. Elmes's relatives. If I have, at any time, claimed for more than I had done, no form of remonstrance has reached me before this from Mr. Tite. I was in friendly communication with Mr. Cockerell throughout, and probably Mr. Tite may recollect that when he, Mr. Tite, attempted to get himself appointed architect, to complete St. George's Hall, I used all my influence to defeat him, and succeeded.

The expressed wish of the late Mr. Elmes was, that no man but the late Mr. Cockerell should touch the details of his building, St. George's Hall; and I, consequently, striving to this end, carried the appointment of Mr. Cockerell against Mr. Tite, and have reaped the malicious opposition of Mr. Tite ever since, in many ways. If Mr. Tite will ask me why the late Mr. Elmes did not wish that he, Mr. Tite, should have anything to do with St. George's Hall, I will tell him, either publicly or privately.

I will state, as briefly as possible, my connexion with St. George's Hall, and what I claim and can prove. Mr. Elmes designed the great arch ceiling, and specified, and had let the contract, to be "solid work, of patent solid compressed bricks." The late Dr. Reid, for purposes of ventilation, required 400 superficial feet of opening in the great arch.

At the request of Mr. Elmes, I went from Manchester, where I resided at the time, to his house in London, 11, Gordon-street, Gordon-square, to try and work out, in detail, the arrangements for ventilation.

It was at this time that Mr. Elmes proposed to me to carry on his works during his absence. He had been ordered abroad for the winter by his medical advisers. I declined the offer more than once, on the plea that I was not an architect, and could not, consequently, fulfil the duties. It was pressed upon me, and I have now no doubt, for the very reason that I did not claim to be an architect, and could not therefore be tempted to tamper with architectural details. The final argument, however, was as follows:—"My dear Rawlinson, if anything will give me a chance of returning with life, it will be the knowledge that I leave my works in your hands. My friend, Mr. Cockerell, has consented to attend to all matters of detail: you will, therefore, consult him on all such points, so that you need not fear any difficulty." I consented; was in regular communication with Mr. Cockerell, and did my best to hold the works together; and on the death of Mr. Elmes I handed St. George's Hall over to Mr. Cockerell, Rainhill Asylum to the Messrs. Moseley, and certain private houses for Mr. H. Hointz and Hardman Earls to Mr. Wordley.

The whole question as to the hollow brick ceiling was laid before the Institute of British Architects, I think in 1849, and will be found in the *Builder* of that period. The paper was prepared at the request of Mr. Roberts, who, I believe, knew all the parties; the late Mr. Elmes and Mr. Cockerell. The facts I stated were also known to the committee of St. George's Hall, to Mr. Picton, and to all the architects of Liverpool, and have never been before disputed. How is it, then, that Mr. Tite can only now come forward to attempt to brand my name with forgery?

I cannot get to my papers at present; but I will, at no distant date, prepare a statement of the case from letters and documents in my possession. Mr. Tite shall have an answer in full.

I may say, however, that in no respect is the late Mr. Cockerell answerable for the hollow bricks, or for the mode of construction of the ceiling. The hollow bricks were made, as designed by myself, by Mr. Clayton, of Purporley, Cheshire. The altered specification was prepared by me, and the work was executed, at day wages, by Samuel and James Holme, the contractors, under the superintendence of Mr. Hughes, the clerk of works.

The late Mr. Cockerell designed all the ornamentation, and, in fact, finished the shell of the building.

ROBERT RAWLINSON, C.E.

MANCHESTER COMPETITIONS.

SIR,—Many readers of the *Builder* are waiting to know the result of the competition for the cemetery buildings for the city of Manchester, the leading men of which have generally had the character of strict integrity in all public matters. I trust the competitors will not be disappointed. The result of another competition, just decided in the adjoining borough, certainly is rather a damper on the sanguine spirits of those who think Manchester committees infallible. Their instructions to architects were for designs for two wings to the Salford Infirmary, at a cost not exceeding 3,000*l*. The result is, they have chosen a design estimated to cost 5,000*l*., which probably means 7,000*l*. What must architects think of this, who, with faith in the words of a committee, have spent their time uselessly?

A SUBSCRIBER.

IRON GIRDERS FOR FLOORS.

SIR,—In the discussion on the construction of workmen's houses in your last number, it is stated by one of the speakers that iron girders on Fox & Barrett's principle for floors discolour the ceilings. Now, it is true that, when the ceilings are formed immediately up to the soffits of the iron joists, and especially when the plastering is hastily done, the lines of joists are sometimes visible, as they frequently are in timber floors; but counter ceilings are now almost invariably used in connexion with the system, and with these there is no contact between the joists and the ceiling; and where the work is carried out in accordance with the specification, it is impossible for the joists to show.

HENRY BARRETT.

Books Received.

Proceedings of the Liverpool Architectural and Archæological Society.

THIS publication includes the papers read in the session of 1861 and 1862, and the minutes of proceedings at the various meetings. The volume would be more attractive and likely to be read if the latter were printed separately, say at the end of it.

VARIORUM.

Beeton's new edition of the immortal "Robinson Crusoe" is full of engravings, designed by Mr. Nicholson and engraved by Mr. Sheeres, and illustrations in colour, executed by Mr. Dickes. It is nicely printed, and makes a very pretty gift-book.——The new number of *London Society* includes a paper on "May Fair a Hundred Years ago," a pleasant "Chit-Chat about Cookery and other Matters," and its usual complement of engraved illustrations, some of them very good.

Miscellanea.

WORNUM'S WALPOLE'S ANECDOTES.—In reply to Mr. Wornum's letter in our last, we have received a letter from Mr. Cunningham stating that the "anonymous note" received by Mr. Wornum in answer to his communication to the editor of the *Daily News*, was written by him, Mr. C. There cannot be any occasion to carry the matter farther.

PRESENTATION TO MR. EDWARD JOSEPH HANSOM, ARCHITECT, BRISTOL.—A testimonial has been presented to Mr. E. J. Hansom, son of Mr. C. F. Hansom, of Bristol, architect. In October last, Mr. Hansom, jun., attained his majority, and a number of gentlemen having dealings with him in connexion with his father's profession, resolved to present him with a testimonial. The sum of 100*l*. was speedily raised for the purpose. The presentation was made at a dinner, to which Mr. Hansom, sen., invited the donors and a few friends, at the Montague Hotel, Kingsdown, and over which he himself presided. The testimonial consisted of a gold watch, chain and appendages, a set of gold studs, sleeve-links and solitaire, in Californian gold; a Whitworth forty-guinea match rifle, and a silver salver.

BARRACKS FOR MARRIED SOLDIERS AT CHATHAM. The drawings and plans for a building, to be erected at Chatham, for the married non-commissioned officers and privates of the line regiments in that garrison, have been approved by the Secretary of State for War. The buildings will be proceeded with immediately.

FALL OF A RAILWAY BRIDGE. — One of the girders of the London and North-Western Railway bridge, over Hyde's-lane, New Town, Birmingham, gave way lately and fell, carrying with it one of the iron parapet walls, and killing a man and horse that were passing below. Two children in the cart to which the horse was attached were thrown out and saved.

PARK FOR THE PEOPLE AT PARIS. — A new garden for the recreation of the working classes is about to be opened in one of the northern suburbs of Paris. This new garden, or, more properly, park, will be the largest within the fortifications of Paris, covering a space of 50 acres, nearly double the area of the Parc Monceaux. It is to be, like other public gardens, planted with the rarest foreign shrubs, selected from the horticultural gardens near Auteuil.

ALLEGED "SAVINGS" BY A BRICKLAYER'S LABOURER.—At an inquest held at Leamington on the body of a labourer, named Henry Reade, it was stated that Reade had been a resident of Leamington for more than forty years, during which time he had always been looked upon as a very poor man. He lived in a small room, which was searched by the police when he died, and it was then found that "out of his small wages as a labourer" he had managed to save 1,026*l.* 2*s.* 9*d.* Some people live on exceedingly little and save a large proportion of their incomes; but in this case surely there was some other source of savings than the small wages of a labourer alone.

ETHNOLOGICAL SOCIETY: ANCIENT BRONZE AND OTHER IMPLEMENTS.—At a recent meeting of this society, Mr. Mackie exhibited a collection of ancient bronze and other implements, found in a cave in Northumberland, and among them was a mould for casting bronze articles, which, we think, must be considered as proof that bronze implements were native productions, not imported, in ancient times. In the discussion that ensued, it was stated by Mr. Lubbock that there have been found in the lacustrine deposits, among relics indicating the earliest "stone period," remnants of textile fabrics, from which it appeared that the art of weaving was known in those distant ages. A paper was read on "The Aboriginal Occupation of North Tynedale and West Northumberland," contributed by the Rev. Rome Hall, which gave an account of the extensive archæological discoveries in that county, where there are remains of fortifications, constructed with massive unhewn blocks of stone, supposed to be anterior to the Roman invasion. A fact mentioned by Mr. Crawfurd tends to throw doubt on the value of the evidence of antiquity afforded by the discovery of the stone, bronze, and iron implements. He stated that in Borneo good iron implements were made at a very early date, the rich iron ore found there being readily converted into malleable iron, by fusion with charcoal and lime, without undergoing the process of casting.

THE NEW CHURCH OF ST. MICHAEL, SHOREDITCH.—The foundation-stone of the proposed new church, in Mark-street, Shoreditch, has been laid by the Bishop of London, in the presence of a very large assemblage. The church will stand immediately opposite the new model lodging-houses erected by Mr. Alderman Waterlow. It will be called the church of "St. Michael and all the Angels," and is part of a plan originated to show how much can be done in church extension by voluntary effort. 18,000*l.* have been already promised, about 7,000*l.* received, and 12,000*l.* more are required to complete the plan. In the meantime a small temporary church has been erected on a portion of the site, and has been in use for some time. As the new building will cover it in, there will be no interruption to Divine service during the time of its erection. Besides this temporary church, one of the arches of the railway near has been fitted up for Divine worship, and has been in use for some time. The new church is to be 78 feet in height, 56 feet 6 inches in width, length over 140 feet, including a deep chancel. The east window will consist of five lights, the window of many small clerestory lights. There will be a bellcote and one bell outside. The materials are banded brickwork, with Bath stone dressings. Mr. Brooke is the architect, Messrs. Sharpington & Co. the builders, and Mr. J. Cockerel clerk of the works.

THE SURVEYORSHIP TO THE BIRKENHEAD COMMISSIONERS.—It has been resolved to appoint a new surveyor, with a salary of 500*l.* a year, in the place of Mr. Mills, resigned, whose salary was only 210*l.* The whole time and attention of the surveyor will now be required. Orders were given for advertisement to issue inviting candidates to apply for the appointment.

SASSOON HOSPITAL.—Sir Bartle Frere lately laid at Poona the foundation-stone of a hospital, to be built at the expense of Mr. David Sassoon, who gives 15,000*l.* to endow it. It is to be open to people of all nations and creeds. Mr. Sassoon is a rich Bombay merchant and a native of India, who has purchased an English estate, and is now, therefore, an English landlord. He has sent his son to an English school and college.

AN ALBERT INSTITUTE FOR DUNDEE.—It has been unanimously resolved at a numerous and influential public meeting in Dundee, to erect an Albert Institute on the ground in front of the Royal Exchange there, so as to form an architectural improvement to the town while forming a memorial of the Prince Consort. A general subscription has been opened, and 10,000*l.* have already been raised. The subscriptions, however, are in the form of shares in a joint-stock company on limited liability principles, and with a capital of 20,000*l.* in 10*l.* shares. It is desired to have the Institute ready for the use of the British Association at their meeting of 1865 in Dundee.

THE GREAT DECREASE OF CITY POPULATION. The decrease is easily accounted for, by the extensive appropriation of buildings which had been formerly devoted to domestic purposes, for the use of offices, &c., connected with the various branches of commerce. In 1851, the entire population of the City of London Union was 55,932: in 1861, it was only 45,286, the decrease in ten years being 10,646. In all the parishes except the following the numbers declined:—St. James, Duke's-place (1851) 827, (1861) 851—increase, 24; St. Margaret, New Fish-street, (1851) 305, (1861) 316—increase 11; St. Martin's, Pomroy, (1851) 181, (1861) 185—increase, 4; St. Mary Mounthaw, (1851) 406, (1861) 474—increase, 68; St. Matthew, Friday-street, (1851) 164, (1861) 167—increase, 3; St. Peter, Paul's-wharf, (1851) 383, (1861) 410—increase, 27.

THE NEWCASTLE-UPON-TYNE SCHOOL OF ART: TESTIMONIAL TO MR. W. B. SCOTT.—The presentation of this testimonial has taken place in the lecture-room of the Literary and Philosophical Society, Westgate-street, Newcastle. There was a numerous assemblage, the majority being the late pupils of Mr. Scott. One of the senior students read an address to Mr. Scott from the students of the School of Art. The design was the work of a lady pupil in the school, and the composition was the work of another pupil. Mr. Scott delivered a farewell address; and a *conversazione* afterwards took place in the Natural History Society's Museum. The fund raised amounts to 170*l.* or 180*l.*; and at a meeting of the committee measures were taken to enlarge the amount, and raise it to a sufficient height to secure a picture by Mr. Scott for the town of Newcastle; the town-testimonial to be a commission to execute the painting.

THE HEALTH OF LIVERPOOL.—The mayor, says the *Albion*, with an earnest desire to co-operate in any means which might be suggested to arrest the progress of fever, attended the last meeting of the health committee, and obtained from the medical officer some explanation respecting the present sanitary condition of the town. It appears from Dr. Trench's report that in Liverpool, as in London, and probably over the whole country, there has been, thus early in the autumn, a considerable increase of typhus; and it is quite consistent with the natural history of the disease to expect rather an aggravation than a diminution of its severity during the coming winter months. This should stir up our rich men and philanthropists, our merchants and employers of labour, at once to inquire how far they can assist in solving the great social problem—*the prevention of typhus among the poor*. Typhus never can prevail in the epidemic form in face of employment for the working classes and ventilation of their dwellings. In winter, however, the ventilation of their dwellings becomes still more defective than in summer, as every crevice is stuffed up with the utmost care for the sake of warmth and for fear of draughts; and it is probably to this cause mainly, and especially from the continued closeness of their apartments during the night, that the greater prevalence of typhus in winter must be attributed.

NEW USE OF BALLOONS.—Some one suggests an economical way of lighting cities, and proposes to apply it to Paris. Balloons, from the cars of which are to emanate an electric light, are to be fixed at certain stations, and hover over the city, at the proportion of one balloon to 50,000 persons. How are the balloons to be managed in gales of wind?

CHICHESTER CATHEDRAL.—The work of restoration is still going on rapidly at this cathedral. The scaffolding used in rebuilding the tower has been raised some 22 feet or 23 feet. It now stands quite clear of the roof; being 110 feet from the ground. The walls of the tower, which are about 5½ feet thick, are now some 86 feet above ground, and they are still rising at the rate of about 1 foot a week. There are between sixty and seventy men employed upon the works.

RESERVOIR PAINTING BRUSH.—Messrs. Crowden & Garrod have patented a painting-brush, the advantages of which, in comparison with the usual kind, is that it is made of first-class bristles selected for the purpose: its shape is nearly flat, and set in thin copper binding, and firmly cemented. The most remarkable claim for the invention is, that the centre of the brush forms a small chamber for the paint, which is worked up to the flag or top of the brush by the arrangement of the bristles, which are so placed to effect this purpose that, while the brush is in use, it is working the colour to the surface and never becoming clogged.

INTENDED DESTRUCTION OF TOOTING COMMON. It is important to the public to know, says the *Standard*, that their interests and their right in this common are endangered. A vigorous effort is required to prevent Tooting Graveney being desecrated, and, in fact, absorbed by a circle of villa residences. An "Inclosure Commissioner" has been holding an inquiry on the subject in the village. A pretence is made that the present scheme does not involve an occupation of the whole tract, but is only an application for permission to build round the outskirts of it, under obligation "to keep the remainder for the public inviolate." But the lineal measurement of its outskirts is only about a mile and a half; and taking at only 60 yards the depth which would be required for each house and its private plot, together with the necessary roadways, there would remain for the benefit of the public not one-third of the present open road.

PINCHBECK PARISH, LINCOLNSHIRE. — A correspondent writes: "The large village parish of Pinchbeck, near Spalding, now presents a gratifying specimen of condition, through the benevolence and liberality of the incumbent, the Rev. W. Wayet, who, after expending 2,000*l.* in repairing and restoring the chancel of the parish church, is now employing 4,000*l.* in a similar manner on the body, besides some necessary additions, as re-hanging bells; and had previously built and endowed, almost entirely at his own expense, the little church of Pinchbeck West, with parsonage and schools; and an equally pretty school at Pinchbeck East, in a third part of the parish; and pays the salaries of the teachers at both himself. This is very satisfactory to read; as whilst, of course, this gentleman must possess adequate means, it is not all, lay or clerical, who equally remember their duty to God and the poor, and recognize the high importance and use of money as a trust."

A NEW FORCE FOR THE DESTRUCTION OF "ARMOUR PLATES." — The new armour-plated ship *Royal Oak*, one of the Channel squadron, was placed in Keyham Docks a few days since for the examination of her bottom. On the water leaving the dock the armour plates adjoining and in contact with the sheathing of Muntz's metal were found to be eaten away by galvanic action, presenting a series of corroded holes running into each other, from half an inch to five-eighths of an inch deep. Some of the plates contained no less than 188 of these holes, whilst none had less than 40. Numbers of the holes had run one into the other to the extent of five or six feet, five-eighths of an inch deep and upwards, altogether presenting one of the most remarkable appearances ever witnessed. This ship has only been about eight months in the water. The holes and corrosion appear to have occurred wherever the red lead or under-coat had been rubbed or washed off. The Lords of the Admiralty have ordered the removal of Muntz's metal from the bottom of the ship. They ought to have tried our old suggestion of building ships *for* armour plates, but without putting on their armour till about to go into action, or at least till war should be proclaimed.

British Archæological Association.—At the meeting to be held on Wednesday 9th, the following papers will be read:—Mr. E Roberts on Brixworth Church; Mr. Saxe Bannister on Unpublished MS. Lives of Henry V.; Mr. Blashill on the Discovery of a Well and other Roman remains at St. Dunstan's-hill.

Proposed Southwark Park.—Application to Parliament is intended to be made in the next session to enable the Board of Works to provide a public park for the south-eastern districts of the metropolis, and for that purpose to purchase lands and houses in the parish of St. Mary Rotherhithe, containing about 60 acres.

St. Thomas's Hospital.—At a meeting of the governors of St. Thomas's Hospital, held on Tuesday last, a report was read from a committee appointed for the purpose, stating that they recommended the purchase of seven acres of land at Stangate, on the banks of the river Thames, as a site for the new hospital. This site—the cost of which will be 95,000*l.*—is situate on the bank of the river Thames, directly opposite the Houses of Parliament. Some memorials were presented from St. Olave's, St. John's, and St. Thomas's parishes, in favour of the Surrey Gardens site, where 17 acres might be obtained for nearly the same sum; and one of a deputation from parishes interested in the matter, said that of 96 answers which he had received from medical men on the south side of London, to whom he had written on the subject, 86 condemned Stangate as the site, 5 were favourable to it, and 5 were doubtful. It was thought that the condition of the river was not likely to be rendered so salubrious as to make this a healthy spot for a hospital. The Board, however, agreed to purchase the site in question at the price named, subject to the approval of the Court of Chancery.

Accident at Leeds.—An alarming accident occurred on Monday morning, at Leeds, from the falling in of the floor of one of the work-rooms in the manufactory of Mr. J. Barran, wholesale clothier, Alfred-street, Bear-lane, in that town. The premises are four stories in height, exclusive of attics, the lower portion of the building being used as show-rooms, cloth-rooms, &c., whilst in the top story the sewing machines, &c., are placed. The attics at the top have hitherto been used for various purposes, but the inconvenience of the slanting roof rendered them less useful than they might otherwise have been, and Mr. Barran therefore resolved to replace the slanting with a flat roof. This work was commenced a week ago, and for the convenience of the workmen the bricks and other materials were piled near the centre of the floor. In the room below, which extends the length of the premises, about forty young women, engaged at sewing-machines, were pursuing their ordinary duty about half-past eleven in the morning, when, without the slightest warning, a third of the floor above them, as well as a large quantity of bricks, fell in, completely burying the five girls who were working in that portion of the room. One of them now lies in a dying state, without the slightest hope of recovery.

An Engraver's Contract.—In the Court of Common Pleas an action for the alleged breach of a contract to engrave on steel a copy of Wallace's picture of the Death of Chatterton within the time limited by the contract, has just been decided in the case of Turner *v.* Barlow. The plaintiff, it appeared, is a publisher of prints, residing at Newcastle-on-Tyne, and the defendant is the well-known London engraver. At the Manchester Art Exhibition in 1857 Wallace's picture of the Death of Chatterton was much admired, and the picture was afterwards exhibited. In 1859 the plaintiff entered into a contract with the defendant to engrave the picture for him in twenty-one months for 462*l.*, the plaintiff contracting to let the defendant have the picture deposited with him "at intervals, as might be agreed between them, for fourteen months." The picture was engraved and finished, but the print did not meet with the extensive sale that was anticipated. From various causes, the print was not completed till 1862. The defence was mainly that the engraver had not been allowed fourteen months as stipulated. The jury found the picture to have been delivered on the 13th of May to the defendant, and that the days of receipt of the picture and sending it away ought to be excluded. The picture had been so nearly fourteen months in the engraver's possession that this was virtually a verdict for the defendant. His lordship, Justice Erle, remarked that in all his experience he never recollected such a case, depending on such a close calculation.

The Proposed Public Park at Rochdale—Work for the Unemployed.—At a special meeting of the town council held last Saturday "to consider and determine on the purchase of the glebe lands on the easterly side of and near and adjoining to Manchester-road, for free grounds and places of public resort and recreation," it was unanimously resolved to purchase the lands named, which were offered at the price, for the larger portion of 500*l.* per acre, and for the smaller of 600*l.* per acre. The surveyor having measured it, found the quantity 20 acres, 3 roods, 895 yards—in round numbers, 21 acres of land.

Renovation of the Royal Pump-rooms, Leamington Spa.—The internal decorations of the Royal Spa Pump-rooms have been completed by Mr. C. Brothers, the local artist employed. The saline baths, the Turkish bath, and the suite of dressing, and lounging rooms, have been all decorated. The front large room is the most prominently decorated. The style of the ornamentation of the ceiling is Grecian. From the centre of the ceiling are suspended three gaseliers, supplied by Messrs. Robinson, of the Leamington Gas Works. The principles of M. Chevreul are said to have been followed in the colouring.

Sanitary Progress.—In a letter addressed to the Mayor of Lancaster, Mr. J. Grant, superintendent registrar, says of the sanitary state of the town:—"The death-rate formerly averaged about 27 in 1,000, or 1 death in 37 persons. I never knew it below 26 prior to the execution of our sewerage and waterworks. During the year ended 31st March, 1863, it was 22·7; and in that ended 30th September, 1863, 22·2, or 1 death in 45 persons. These points are lower than we have ever previously reached. If instead of the latter rates the mortality had been 27 in 1,000, it is evident that 90 more of the inhabitants of Lancaster would have been swept to the grave during the eighteen months. In the seven years 1838-44, when the birth-rate was only 33 in 1,000, the deaths under five years of age were about 40 per cent. of the total deaths. They are now about 35 per cent.,—a decrease of 12·5 per cent.——The filthy state of the Cam at Cambridge has been complained of in the local Council, and the matter has been referred to the General Purposes Committee.

Liverpool Architectural Society.—The last meeting was presided over by Mr. W. H. Weightman. Several communications were read, including one from the Secretary of the Literary and Philosophical Society, inviting co-operation in the form of a deputation to wait upon the Mayor, to request him to give his countenance and support to the proposed celebration of the tricentenary of the birthday of Shakspeare. The communication was referred to the Council. In respect of the scale of charges recommended by the Architectural Alliance, on the motion of Mr. Kilpin, seconded by Mr. Boult, it was resolved that the delegates be requested to bring before their respective societies the question of the desirability of establishing a uniform system of charging for valuation of property. It was mentioned that whilst London surveyors charged ½ per cent., or 5*l.* upon every 1,000*l.*, the charge usually made by Liverpool surveyors was only a guinea for the first 1,000*l.*, and half a guinea for each subsequent 1,000*l.* The paper for the evening, "On the Construction of Iron Roofs," was then read by Mr. J. J. Birckel.

Halifax School of Art.—A *conversazione* and exhibition of paintings, &c., in aid of the funds of this school, have been held in the New Assembly Rooms, Harrison-road, Halifax. The institution has now been in existence for upwards of five years. Hitherto its claims and importance have not been fully recognized, nor has it met with that general and liberal support to which it is entitled. In order, therefore, to clear it of a little debt, and to bring its active existence properly before the public, the committee decided upon holding a *conversazione* and an exhibition of paintings. For this purpose, several gentlemen in the town and neighbourhood lent specimens from their private collections. Mr. Ryan read a report, in which he stated, that the total number receiving instruction through the agency of this school during the half-year, was 808, showing an increase of 292 since last year. Mr. E. Crow, one of the Government art inspectors, in June last, awarded nineteen local medals for students, this being the largest number ever awarded in this school. In the examination of the first and second grade, thirty-three and fourteen students respectively were successful. The prizes were distributed after the reading of the report.

Architectural Institute of Scotland.—At the annual general meeting of the Architectural Institute of Scotland, held on the 27th ult., the Hon. Lord Jerviswoode was to open the present session by an introductory address, and a paper was to be read by Mr. David Cousin, architect, "On Algiers, and its Buildings, and the Journey thither."

Californian Colours.—A paint, or series of paints, has recently been discovered in California, which is said to yield seventy-four different tints, varying from vermilion to dove-colour. If all based on mercury, as vermilion is, however, many of them may be of little worth from the unfixed and changeable nature of most mercurial colours.

A Broadway "Store."—There is in the fashionable street of New York a "marble store," in which is carried on the largest wholesale and retail business,—it being at once the Leaf's and the Swan & Edgar's, of America. On the underground floor, below the basement, are four steam boilers of 50-horse power capacity each, which operate separately or in connexion. These are used in heating the building and in driving the engines. The space in the building heated by them is 1,819,550 cubic feet, and 38,000 lineal feet of steam-pipe are used for this purpose. The introduction of the steam works cost about twenty-five thousand dollars. There are five steam hoisting engines of 6-horse power each. There are also five elevators, each worked by one of the engines. Except the walls, the whole building has been lately reconstructed. The interior has been much changed in appearance. The work was done under the supervision of Mr. J. Kellum, the architect who furnished the design for the new city court-house.

TENDERS.

For the second contract for the rebuilding of the Hospital for Poor French Protestants at Victoria-park. Mr. R. L. Roumieu, architect. Quantities taken out by Messrs. Welsh & Atkinson, and Mr. Percy:—

Carruthers	£17,095	0	0
Ashby & Son	15,437	0	0
W. Cubitt & Co.	15,344	0	0
Mansfield & Son	14,956	0	0
Kayes & Head	14,569	0	0

Now ready, in 1 vol. 8vo. cloth gilt, price 21s. (for 21 days), Vol. I. of

THE ART JOURNAL for 1863, being the second of a New Series, in which are contained upwards of One Thousand Engravings on Wood, chiefly from Works selected at the International Exhibition, and Specimens of the Progress of British Art and Manufactures. Among these will be found the chief productions of British contributors to the exhibition. It is, therefore, a volume well worthy to be placed on the drawing-room table, and a suitable gift present. It contains Thirty-six Steel Engravings, which include twelve of the late J. M. W. Turner's pictures, &c., &c., illustrated articles on the principal Porcelain Manufactories of England, and their Trade Marks; Examples of the Works of British Artists, displaying the style and character of their compositions, articles on "The Second Exhibition," illustrated by J. C. M. Bellew; "Constantinople Industrial Exhibition," illustrated; "Modern Art, Its Professors and Professed," "History of Caricature and of Grotesque in Art," by Thomas Wright, illustrated, &c. &c.

N.B. The Volume for 1862, first of the New Series, can also be had price 21s. bd. in cloth gilt, or 31s. 6d. morocco extra, and the Illustrated Catalogue of the International Exhibition, 1s.

London: JAMES S. VIRTUE, 26, Ivy-lane.

Now ready, in Two Vols. imperial 8vo, price £1 1s. per Vol.

Published under the Superintendence of the Ecclesiological Society.—Contents.—The Inscription of Consecration.—A Few Words to Clergymen on the Music of the Future.—Notes on Churches in Rome.—Bells of Bishop Cosin.—On the Proportions of Church Towers.—Mr Beckwith's Report on the Fetter Lane Church.—Mr Beckwith on the Joiner.—Modern Wrought Ironwork.—Proposed Exhibition of Stained Glass.—The Lenten Fast.—Church Restoration.—Destruction of late Mr. Prichard's Church at Llandaff.—The Church of the Abstinence Friars.—Old Brass (with plate).—Foreign Correspondence.—Reviews.

London: J. MASTERS, Aldersgate street and New Bond street.

Now Complete, in Twenty-one Volumes, 4to. and INDEX Eighth Edition. A Dictionary of Arts, Sciences, Manufactures, Commerce, History, Geography, Biography, and General Literature. Illustrated with upwards of 5,000 Engravings on Wood and Steel. Price £21 10s. cloth boards, or £25 5s. half-russia.

"The New Edition of the 'Encyclopædia Britannica' eclipses even the national fame of its previous editions, and of which the country may well be proud."—*Morning Herald.*

"As a book of reference, the 'Encyclopædia Britannica' embraces every topic on which any one can be expected to have full and authentic information, and on the several matters of which it treats, the distinguished reputation of its contributors is sufficient guarantee."—*Times.*

"As a present to a person on his entrance into life, to a student, or to a reader in a sick chamber, a gift could be hit upon more happily."—*Gentleman's Magazine.*

"A detailed criticism of its contents would require an army of critics to produce a review itself of a length quite inadmissible; all criticism must be abandoned, because it is practically a impossibility. The world has now such an Encyclopædia as it never had before."—*Times.*

Edinburgh: ADAM & CHARLES BLACK.

London: LONGMAN, MARSHALL & CO.

Just published, new and enlarged Edition, December 1863,

BIDDER'S EARTHWORK TABLES, showing the Contents of Excavations, Area of Slopes, &c. By G. P. BIDDER, Jun. C.E.

The designs in this volume are suitable for either cemetery or churchyard. The book forwarded free to any part of the kingdom for post-office order

TO ARCHITECTS.

MR. CHARLES WARREN, Architectural Colourist, No. 9, Portland-gardens, Notting-hill, London, W.

NOTICE.

MR. FENTON, Late Engineer and Surveyor to the Croydon Local Board, Office—No. 8, Cannon-row, Parliament-street, Westminster, S.W.

PARTNERSHIP.—A Gentleman with 500*l.* to 1,000*l.* to join the Advertiser in and Old-established BRICKFIELD.—Address, M. A. Post office St Albans, Herts

A GENTLEMAN of high respectability, and who thoroughly understands the Slab, Slate, and Enamelling business, preserving a valuable connexion in town, country, and the Colonies, is desirous of meeting with a PARTNER, who can command a capital of 3,000*l.* The incoming partner would be expected to keep the cash and superintend the book-keeping, the Advertiser taking the management of the men and the travelling department. The lime, plaster, brick, and stone trade might be added with advantage.—Apply, in the first place, by letter, to B Office of "The Builder," preparatory to an interview with the Advertiser's Solicitors.

GAS and GENERAL ENGINEERING OFFICES, 1, HANOVER-STREET, EDINBURGH (opposite the Royal Institution of Art Mr JOHN ROMANS, Practical and Civil Engineer, may be consulted at the above address on all matters pertaining to gas-works, water works, and other engineering operations.—Plans and specifications furnished, works erected and repaired, or taken on lease for a term of years.—Orders received for Scottish Canne. Coal and Fire clay goods

AN ARCHITECT with a fair practice, chiefly in cotton mills, looms, sheds, and dwelling houses, has an immediate want of a competent ASSISTANT, to take charge of the office. He must be a good draughtsman and designer, able to draw out specifications for the different trades, and must be perfectly steady.—Address, stating age, salary required, and giving names of references, to MATTHEW WATSON, Architect, 51, Market-street, Burnley, Lancashire.

AN ARCHITECT and SURVEYOR, practising in one of the East-Indian Colonies, requires the immediate ASSISTANCE of a thoroughly qualified gentleman, who has a practical knowledge of the various styles, and of building generally; an acquaintance with Indian Law and Eglish Law is also quite Requisite. A salary of £250 per annum and liberal allowances is offered, and the prospects of a permanent Commissionership (by which could be understood to Mr FAIN, 10, Gt. Ormond-street, W.C. with full particulars respecting qualifications and references.

BIRKENHEAD.—To SURVEYORS and CIVIL ENGINEERS.—The Birkenhead Improvement Commissioners are invited APPLICATIONS from properly qualified persons for the OFFICE of SURVEYOR, to the BOARD, at a salary of £600 per annum, being provided by the Board. A thorough practical knowledge of drainage, sewerage, roadmaking, laying out of streets, surveying, regulating of buildings, sewerage, and various other details involved in an efficient carrying out of the general works of the town, is indispensable. The person appointed will be required to devote the whole of his time to the duties of the office, and to preclude him from undertaking any other employment whatever. The duties to commence on the 1st FEBRUARY next, and the engagement to continue subject to termination by either side on six months' notice. Applications and testimonials under cover, endorsed "Surveyor," and addressed "To the Chairman of the Road and Improvement Committee, Commissioners' Offices, Birkenhead," to be sent in on or before the 15th DECEMBER next. By order,

AMBROSE WALN, Clerk of the Birkenhead Improvement Commissioners.

Commissioners' Offices, Birkenhead, 24th Nov. 1863.

CITY of ELY BOARD of HEALTH.—The Local Board of Health give Notice that at their Meeting to be held on WEDNESDAY, the 30th day of DECEMBER instant, at the Grand Jury Room, in the Shire Hall, Ely, at TWELVE o'clock at noon, they will be prepared to appoint a fit and proper person to the united offices thereon vacant by the resignation of Mr B Latham on his application to the Secretary

The Ely Union Local Board of SURVEYOR, INSPECTOR OF NUISANCES, and SUPERINTENDENT OF HIGHWAYS for the District of the City of Ely, which comprises an area of about 17,000 acres, contains 1,600 Houses, and 143 miles of Highways, under the jurisdiction of the Local Board. The person elected will be required to devote the whole of his time to the duties of the office, and to give security for the performance himself in 200*l.*, and two sureties in 100*l.* each. Candidates may collect the duties appertaining to the several offices from the "Public Health Act, 1848," the "General Highway Act," the "Nuisances Removal Act, 1855," the "Local Government Act, 1858," and the "Sewage Utilization Act, 1865," and the Board consider it indispensable that they should be persons familiar with the construction and working of steam engines, furnaces for the consumption of smoke, filters, works of water supply, sewerage through tubular pipes, and house drainage, the making and management of roads, streets, and pavements, the taking of levels, the value of labour and materials, the preparation of plans, specifications, and estimates, and the superintendence and management of all such works as come within the province of a Local Board of Health. The salary will be 120*l.* a year, payable quarterly. The person to whom candidate will be required to enter on his duties as soon after the 6th of January next as possible, and his tenure of the offices will be during the pleasure of the Local Board. Any candidate desiring their testimonials to be read at their meeting on TUESDAY, the 15th instant, accompanied by a letter in their own handwriting, stating their present or latest employment, and containing the names and addresses of their proposed sureties, in receipt of which a selection will be made, and such candidates (if any shall receive an invitation from the Clerk will be expected to attend at the first year, and then to rise. Address letters to M at Mr. Colpitts, Newsagent South Motion-street, W.

THE OSWALDTWISTLE LOCAL BOARD—SURVEYOR and INSPECTOR of NUISANCES—The Local Board for the District of Oswaldtwistle, in the County of Lancaster, requires the services of a properly qualified Person to perform the duties of SURVEYOR and INSPECTOR of NUISANCES. He will be required to reside within the District, and to devote the whole of his time to the duties of the Office. Salary £ per annum. Applications, with Testimonials, to be sent in on or before the 31st day of DECEMBER, 1863, to the Local Board Office, Oswaldtwistle, near Accrington, Lancashire, addressed to "The Chairman of the Highway and Drainage Committee."

JOHN PICKUP, Law Clerk.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great Jubilee Show it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House in Hanover square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use, and the names of applicants, with TESTIMONIALS, some of them of seven years' experience from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, and free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c., also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully requested to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good Article, and in lengths best adapted to their roofs. The above works were the only ones to which Prize Medals were awarded. Testimonials, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 32, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It worksand ANY WEATHER, is much used for water-works, and for the new and restoration of churches. When used as ashlar work it is not necessary to tool it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the Kingdom.

TISBURY STONE.
The WARDOUR (CHILMARK) and TISBURY STONE
Are prepared to execute orders to any extent for their TISBURY STONE.—This is a close, fine-grained Stone, of a beautiful colour, possessing all the qualities of the best Portland, in which range it is placed geologically.
It will supply the long-wanted desideratum of the Architect, Builder, and Sculptor, as the Stone is a first-class Weather Stone, easily worked, and carries a fine arris; and is eminently adapted for carved mouldings, bas-reliefs, architecture, and works of art, requiring only to be known to be one the
STONE OF THE DAY.
Specimens, Price, &c. may be obtained of
SAMUEL TRICKETT,
General Stone Merchant, Millwall; or at the Offices of the Company, 3, Adelaide-place, London Bridge.

WOOLPIT, SUFFOLK.
WHITE and RED FACING BRICKS,
and other Kiln Goods, at moderate prices.—Samples at T. ALLEN'S, 7, Great Smith-street, Westminster; or from Mr. CAWSTON SLATER, at the Works.—See R. G. BURNELL'S Report on Building Materials in "Mackenzie's Record of International Exhibition," p. 77

TO BRICKMAKERS.—All Parties who
BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold,
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster.

HOLLOW BRICK FIRE-PROOF FLOORS.
BUNNETT'S PATENT.
THIS PATENT FOR SALE, OR LICENSES GRANTED.
Apply to Mr. J. BUNNETT, ENGINEER, DEPTFORD.

PATENT INDURATING SOLUTIONS,
For the Preservation of Stone, Cement, &c.;
PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, &c.
FIRE-PROOF VARNISH,
For Internal Wood Work, Roofs, and Church Work generally. This Varnish renders Wood Uninflammable, and Preserves it from Decay.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.
39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.
PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of stone, cement, &c. a solution of Fluo Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo Silicic Acid. Lath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high carriage to distant parts of stone has been a contributor to Art; but since the Fluo Silicic process can be applied as readily to soft stone after it is carried, that obstruction ex sts no longer. The Fluo-Silicic process effectually arrests the decay of all stones. For further information apply to the Manager of the Company, Mr DUDLEY, Architect, as above.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By the new process, which is patented, pure Zinc Paint is cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATION.—Some Paint Grinders have commenced adulterating Zinc Paint with Sulphate of Barytes from ten to thirty per cent. Whether sold as "pure," the name of "Improved Zinc Paint," or at the number of Twenty-three varieties, no workman can produce good work with such material. Without wishing to depreciate other Paints, we will only say that every Pound put forth for their best work.
CHEAPNESS.—It only requires one pound to the hundred weight of Linseed Oil, mixed with the Paint, which six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

Self-Regulating Pan Closet.

An illustrated Priced Catalogue will be forwarded upon the receipt of eight postage-stamps.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for the admission of Pure Air.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street Borough, London

GUTTA-PERCHA MILL-BANDS.—The Gutta Percha Company beg to state that the increasing demand for the Gutta-Percha Stamping for Driving Bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent adhesion and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 2 to 40 feet long, renders them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Boxes, Union Joints, Flasks, Bottles, Bowls, Hand-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

THE GUTTA-PERCHA COMPANY, PATENTEES, 18, WHARF ROAD, CITY ROAD, LONDON.

HENRY DOULTON AND CO.'S

PATENT COMBINED SMOKE AND AIR FLUES.

BY THIS INVENTION PERFECT DRAUGHT AND COMPLETE VENTILATION CAN BE SECURED.

The air-flue follows the line of the smoke-flue, the passages being quite distinct. The heat from the smoke-flue causes a current, which carries off the vitiated air admitted by junctions near the ceiling. The pipes or blocks are *all made to bond with ordinary brickwork.*

Where the blocks come together, each air-flue has a lip or projection, which enters the next block and completely shuts off the air-flue from the smoke-flue at the joint. This lip, with dowels at the opposite corners of the blocks, also holds the lengths firmly together.

Curves are made to suit any inclination.

Manufactured in terra cotta for smoke-flues equal to 12 in 10 in. and 8 in. diameter, with ventilating-flues of proportionate size.

Small models will be forwarded to architects on application to

Henry Doulton & Co. High-street, Lambeth

INTERNATIONAL EXHIBITION, 1862. CLASS 10, No. 2268.

The only MEDAL for "STONEWARE PIPES" has been awarded to

HENRY DOULTON & CO., LAMBETH.

Extract from Jurors' Report:—

"H. Doulton & Co.—Stoneware Pipes, &c. excellence of manufacture and lowness of price."

GLAZED STONEWARE DRAIN PIPES, TERRA-COTTA CHIMNEY TOPS, &c. &c.

Supplied on the lowest terms, direct from

H. D. & CO.'S MANUFACTORIES, HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; and SMETHWICK, near BIRMINGHAM.

JAMES STIFF & SONS,

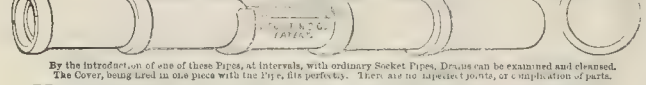
MANUFACTURERS OF GLAZED STONEWARE DRAIN-PIPES, WATER-CLOSET PANS, SINK-TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE PURPOSES; ALSO

IMPERISHABLE TERRA-COTTA CHIMNEY-TOPS, FLUE-PIPES, COPINGS, GARDEN EDGINGS, &c.

LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

STRAIGHT TUBES, with SOCKET JOINTS, in Two-feet Lengths.

PAN, 4s. 6d.



TRAP, 2s.

HALF-SOCKET PIPES same prices as the Whole Sockets, by the use of which Drains may be readily examined, and Junctions inserted, in the event of forming further connections.

LOVEGROVE'S PATENT DOUBLE AND TRIPLE JUNCTIONS AND INSPECTION SHAFTS for small Sewers and Drains, by the use of which the Sewers and Drains may be examined and cleansed without disturbing the Soil-pipes of the Houses, and also for Ventilation of Sewers and Drains.

DRAWINGS, WITH PRICES, WILL BE FORWARDED FREE, ON APPLICATION.

DOULTON'S PATENT OPERCULAR PIPES.

By the introduction of one of these Pipes, at intervals, with ordinary Socket Pipes, Drains can be examined and cleansed. The Cover, being fixed in one piece with the Pipe, fits perfectly. There are no imperfect joints, or complication of parts.

Manufactured by HENRY DOULTON & CO. LAMBETH.

MANUFACTORIES—LAMBETH, LONDON; SMETHWICK, near Birmingham; and ROWLEY REGIS, STAFFORDSHIRE.

The only PERFECT, SIMPLE, and really EFFECTIVE INVENTION by which Drains can be MINUTELY EXAMINED AT ANY TIME (obstructions removed, and CAP-JUNCTIONS of any size inserted in the event of further connections being required) without breaking a pipe, or disturbing the flow of sewage.

They require no more labour in the laying down, and are supplied at the same price as the ordinary Socket Pipes.

SALT GLAZED STONEWARE SOCKET DRAIN PIPES, INVERT BLOCKS, &c.

Every Article required for DRAINAGE and SANITARY PURPOSES TERRACOTTA CHIMNEY-POTS, GARDEN VASES, &c. &c.

BRICKS, LIME, CEMENT, SAND, LATHS, HAIR, and all other BUILDING MATERIALS

STANDING & MARTEN, BOURNE VALLEY WHARF, NINE ELMS, LONDON, S.

"*" Specimens of CREEKE'S PATENT PIPES may be seen at the Architectural Exhibition, 2, Conduit-street, Regent street, W.

J. TYLOR & SONS' PATENT REGULATING WATER-CLOSETS.

Valve.

Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is obtained. And it can be worked by one simple lever. No short valves, cranks, or wire-work are used. The Closets can be seen in action at the Manufactory, and illustrated Catalogues had on application to the Manufactory, J. TYLOR & SONS, Warwick Lane, Newgate-street, London.

GUEST & CHRIMES, FOUNDRY and GENERAL BRASS WORKS, Rotherham; and 37, Southampton-street, Strand, London, W.C.

London House, Mr. THOMAS BEGGS.

ESKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all smell, and requires no cisterns, service boxes, cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipes. It is supplied in three qualities, all equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are usefully applied to the ordinary Pan Closet, alike dispensing with all cisterns, service boxes, levers, cranks, wires, &c. The Regulator is applied separately, as well as connected to ordinary direct Service Main Cottage Water Closets.

Chrimes's Patent High pressure Single and Double Loose Valve and Screw Down Cocks; Ba, roved Self-acting and Pull Water-Closet; Patent Absolute Water Waste Preventer; Plumbers' and Gas-Fitters' Brass Work of every description. Drawings, Descriptions, Prices, and Testimonials will be forwarded per post on application as a fact.

UNDERHAY'S PATENT REGULATOR CLOSETS for constant or intermitting supply, dispensing with Cisterns, Service Boxes, Valves, Levers, Cranks, &c. &c. Much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed, 5,000 of them have been sold, and no instance of failure has occurred.

TO ARCHITECTS, BUILDERS, PLUMBERS, &c.

In consequence of the BANKRUPTCY of the late firm of C. BOTTEN & SON,

F. G. UNDERHAY

now manufactures on HIS OWN ACCOUNT his Patent Regulator Water Closets, Valves, Gas Meters, &c. on the same premises.

CRAWFORD PASSAGE, CLERKENWELL, LONDON, E.C.

INTERNATIONAL EXHIBITION, 1862.

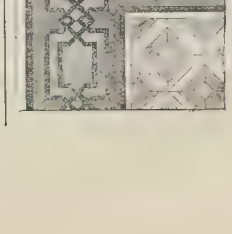
CLASS 35, NO. 6849

3s. 9d.

The ONLY MEDAL "for STONEWARE" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the most perfect pattern of their ENAMELLED STONEWARE CLOSET PANS, at the price of the commonest description of earthenware.



Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness, it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

PENCILS, BLACK LEAD, and COLOURED CHALKS.

A. W. FABER'S POLYGRADE LEAD PENCILS, sold by all Stationers and Artists' Colourmen.

A. J. B. BERESFORD HOPE, President.
GEO. GILBERT SCOTT, Treasurer.
JOSEPH CLARKE, Hon. Sec.

NOTICE to CREDITORS.—In the matter of the Trust Deed or Assignment for the benefit of creditors, executed by GEORGE WHEELER, of West Cowes, in the Isle of Wight, and of Hilsea, near Portsmouth, builder and contractor, notice is hereby given, that all persons who have any claims or demands against the estate of the above-named GEORGE WHEELER, and who have not as yet sent in particulars of their claims or demands, and adjusted and proved the same, are hereby peremptorily required on or before the 21st day of DECEMBER, 1863, to send to Mr. GEORGE F. MURDOCH, of No. 7, Grigg-street, Portsmouth, Accountant, a full and correct statement of such claims or demands, in order that the same may be examined and adjusted, and when so examined and adjusted, to verify and prove the same. And notice is also given, that all persons who have sent in claims, but have not adjusted and proved the same are hereby peremptorily required, on or before the said 21st day of DECEMBER, 1863, to adjust and prove the same, and to forward such proof to Mr. GEORGE F. MURDOCH, as above. And notice is further given, that as soon after the said 21st day of DECEMBER, 1863, as the arrangements necessary for the purpose will admit, the trustees will proceed to a third and final dividend, and distribute the assets remaining in their hands amongst the creditors and persons entitled thereto, having regard to the debts and claims only in which on the said 21st day of DECEMBER, 1863, shall have been proved, and that the said trustees will not be liable for the assets so distributed, or any part thereof, to any person whose debt or claim shall not be proved and sent in on or before that day.—Dated the 24th day of November, 1863.

MARSHALL & SON, Hanover-street, Portsea,
Solicitors to the Trustees.

PURSUANT to an Order of the High Court of Chancery, made in a cause "WILLIAM ROWE against EDWIN TEMPSON and Others," the Creditors of Mortimore Tempson, formerly of Stanhope place, Hampstead road, Middlesex, Builder, but late of the Victoria Tavern, Number 8, Cresce t-place, Mornington-road, Middlesex, Licensed Victualler (who died on the 31st day of August, 1863), and also the Incumbrancers upon his Real and Leasehold Estates, are by their Solicitors, on or before the 21st day of JANUARY, 1864, to come in and prove their claims at the Chambers of the Vice Chancellor Sir John Stuart, Number 12, Old Buildings, Lincoln's-inn, Middlesex, or in default thereof they will be peremptorily excluded from the benefit of the said Order. WEDNESDAY, the 27th day of JANUARY, 1864, at ONE o'clock in the Afternoon, at the said Chambers, is appointed for hearing and adjudicating upon the claims.—Dated this 9th day of December, 1863.

ROBT. W PEAKE, Chief Clerk.
JOHNSON & MASTER,
22, Duke-street, Grosvenor square, Solicitors for the Plaintiff.

MODELLING.—A NEW MODELLING CLASS will be FORMED at the LONDON MECHANICS' INSTITUTION, 29, SOUTHAMPTON BUILDINGS, CHANCERY LANE, under the direction of Mr. H HALE, on TUESDAYS and SATURDAYS, at EIGHT p.m. commencing 15th DECEMBER, 1863. Terms per quarter, members of the Institution, 2s. Non-members, 3s. Entrance fee to non-members, 1s.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

72—74, Bishopsgate street Within, November, 1863.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr. TYLER, 12, Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

COMPETITIONS.

TO ARCHITECTS.—The Committee for the Erection of a Memorial, in Radnorshire, to the late Sir George Cornewall Lewis, Baronet, have decided that the best form of Memorial will be an Eleanor Cross; but, in the absence of information as to the probable cost, they have determined to invite Architects to send in ARCHITECTURAL DRAWINGS from which the work may be executed, with an ESTIMATE of an ELEANOR CROSS, to be erected on the Castle Hill, near Radnor, or of an Obelisk, to be erected either on the point of Radnor Forest called Whimble, Old Radnor Hill, or the Castle Hill; the total cost of erection not to exceed 1,000l. A space must be appropriated for an inscription. Perspective drawings will not be submitted for competition. The drawings and estimate may be sent, on or before the 30th JANUARY, 1864, to the Honorary Secretary, Mr. R. W. BANKS, Ridgebourne, Kington, Herefordshire, who will give any information which may be required as to the material for building obtainable in the locality. The drawings of unsuccessful competitors will be returned.

PETERBOROUGH UNION.—To ARCHITECTS and BUILDERS.—The Guardians of the Peterborough Union hereby give Notice, that they are desirous of receiving PLANS and SPECIFICATIONS for a NEW CHAPEL, intended to be erected for the use of the Inmates of the Union Workhouse. It is proposed to build the same with brick, and stone facings, of not too ornamental a character, with proper Fittings to accommodate 350 persons. Designs, with the estimated cost, must be sent (free of expense) on or before FRIDAY, the 1st of JANUARY next, directed to me, the undersigned, and endorsed, "Design for Chapel." The Guardians do not pledge themselves to accept any of the designs sent in, or to pay the expenses of their preparation, and those not selected will be returned.—By the Board,

S. C. W. BUCKLE, Clerk to the Guardians.

Peterborough, 23rd November, 1863.

TO ARCHITECTS and OTHERS.—The Directors of the Wantage Corn Exchange Company (Limited) are prepared to receive PLANS and SPECIFICATIONS for the ERECTION of a CORN EXCHANGE, SAVINGS BANK, MAGISTRATES', COMMISSIONERS', and READING ROOM, in the Market Place in the town of Wantage. Information as to size of rooms, &c. and other particulars, can be obtained of the Secretary.—The Plans, &c. addressed to the Directors, are to be forwarded to me, at the London and County Bank, Wantage, not later than the 1st day of FEBRUARY, 1864. The sums of 10l. and 5l. will be given to those Architects who may, in the opinion of the Directors, have furnished the second and third best designs.

WM MARLOW, Secretary.

CONTRACTS.

TO ARCHITECTS and BUILDERS.—The Guardians of the Poor of the Wilton Union desire to obtain PLANS, with specifications, estimates, and TENDERS for BUILDING a CHAPEL, with the necessary interior fittings complete, adjoining their Union Workhouse. The building to be of a plain and substantial character; brick-built, with stone dressings, and capable of accommodating 150 adult inmates. Plans, &c. to be sent to the Clerk on or before the 31st DECEMBER inst.—Further particulars can be obtained of Mr. BARNES, the Master of the Union Workhouse, near Wilton. THOMAS THRING, Clerk.

Wilton, near Salisbury, December 4, 1863.

CONTRACTS.

WAR DEPARTMENT CONTRACT.
NOTICE to BUILDERS.

TENDERS are required for the following Service at Chatham Garrison; viz.—

ERECTING A PURVEYOR'S LAUNDRY.

Parties desiring to Tender for the execution of these Works must leave their names at this Office, on or before the 19th day of DECEMBER, 1863, and pay the sum of half a guinea for the Bills of Quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender

Royal Engineer Office, Chatham, 8th December, 1863.

LONDON DISTRICT.—To BUILDERS and OTHERS.—WAR DEPARTMENT TRIENNIAL CONTRACTS FOR WORKS AND REPAIRS.—The Commanding Royal Engineer, London District, hereby gives notice that sealed TENDERS will be received at the War-office, Pall Mall, London, S.W. on or before 12th DECEMBER, 1863, for WORKS and REPAIRS at the undermentioned Stations from 1st January, 1864, to 31st March, 1865, viz.—

Windsor Cavalry and Infantry Barracks, and Belvidere Fort.

The Committee do not bind themselves to accept the lowest or any Tender, or to pay any of the expenses incurred in respect thereof.—By order, JOHN A. WALKER, Honorary Secretary,

Exhibition Committee, Royal Dublin Society.

December 1st, 1863.

METROPOLITAN BOARD of WORKS.

THAMES EMBANKMENT, MIDDLESEX SIDE.—To BUILDERS, CONTRACTORS, and OTHERS.—EXTENSION of TIME for RECEIVING TENDERS.—The Metropolitan Board of Works, hereby give notice, that they have EXTENDED the PERIOD for receiving TENDERS for the above Works from THURSDAY, the 26th day of NOVEMBER instant, until THURSDAY, the 17th day of DECEMBER next. The WORKS to be CONTRACTED for are the CONSTRUCTION, COMPLETING, and MAINTAINING in REPAIR for Twelve calendar months, the following WORKS, that is to say:—An Embankment Wall, 1,970 feet in length, or thereabouts, with certain Landing-places, Steamboat-pier, Sewers, Subway, Storm-outlets, and other works in connection therewith, situate in and adjacent to the foreshore of the River Thames, on the Middlesex side, between Waterloo Bridge and the Eastern end of the Temple-gardens. Parties desirous to submit Tenders may, on and after SATURDAY, the 28th NOVEMBER instant, upon payment of 10l. 10s. obtain plans, sections, specifications, forms of Tender, and other particulars on application to Mr. J. W. BAZETTE, Engineer of the Board, at the Office, Spring-gardens, between the hours of NINE A.M. and FOUR P.M. or on Saturdays between the hours of NINE A.M. and TWO P.M. until THURSDAY, the 17th day of DECEMBER next. The Tenders are to be addressed to the Clerk of the Board, and must be delivered at this Office before FOUR o'clock on the last-mentioned day, and no Tender will be received after that hour. The Tenders will be opened at a meeting of the Board, to be held on FRIDAY, the 18th DECEMBER and the parties Tendering must be in attendance at the Board at TWELVE o'clock on that day. The Board do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two or more approved sureties for the due and satisfactory performance of the works.

JOHN POLLARD, Clerk of the Board.

Spring-gardens, S.W. November 20, 1863.

NORTH-EASTERN RAILWAY.—DARLINGTON SECTION.—The Directors are prepared to receive TENDERS for the following WORKS, viz.—

The ERECTION of a STATION MASTER'S HOUSE, at Crook.

The ERECTION of SIX COTTAGES, at Darlington.

The ERECTION of an ENGINE SHED, at Saltburn-by-the-Sea.

Plans and specifications of the above may be seen at the Architect's Office, Northgate, Darlington, on and after WEDNESDAY, the 9th day of DECEMBER, until TUESDAY, the 22nd day of DECEMBER, 1863. Tenders are to be addressed to the Secretary, and delivered at the Rail way Office, Darlington, not later than TUESDAY EVENING, the 22nd DECEMBER, 1863. The Directors do not pledge themselves to accept the lowest or any Tender.

(Signed) THOS MAC NAY, Secretary.

Railway Office, Darlington, December 3, 1863.

TO PLASTERERS and OTHERS.—TO BE LET by CONTRACT, the PLASTERING of an eleven-roomed HOUSE, situate at Gale-terrace, Carshalton. Specification to be seen on the premises. The house is already lathed, and fit for immediate commencement.—Apply as above.

[*For remainder of Contracts see next Page.*

NEW CROSS TURNPIKE ROADS.—The Trustees of the New Cross Turnpike Roads will receive TENDERS for the ROAD SCRAPINGS on the several Districts of the said roads, from Deptford and New Cross, to Tyler's Gate, to be delivered at the several Turnpike Gates; and at the Office of the Clerk to the Trustees, Cross's Hill, Greenwich; or at the Office of the Surveyor, JAMES R. HEWARD, New Cross, Sealed Tenders inside on the printed forms, addressed to the Clerk to the Trustees must be delivered at the Green Man Inn, Deptford, by or before ELEVEN o'clock in the Forenoon, on SATURDAY, the 19th of DECEMBER, 1863.—By order, CHARLES AUSTIN SMITH, Clerk to the Trustees.

Cross's Hill, Greenwich, December, 1863

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a VILLA RESIDENCE, STABLING, &c., in Wimbledon Park, may have copies of the quantities on payment of one guinea. The lowest Tender will not necessarily be accepted. Applications to be made to the Architect, Mr JOHN GILES 2, Verulam Buildings, Gray's Inn, W.C.

TO BUILDERS.—CLUTTON CHURCH, SOMERSET. BUILDERS are invited to TENDER for the ENLARGEMENT and RESTORATION of the Parish Church of Clutton, near Bristol, and can see the drawings and specifications of the proposed Works at the Rectory House, Clutton, on and after MONDAY, the 14th inst. Tenders to be forwarded on or before the 31st inst. to the Architect, JOHN NORTON, Esq., 21, Old Bond-street, London, W. The Church wardens do not bind themselves to accept the lowest or any Tender submitted.

HORNINGLOW CHURCH, BURTON-ON-TRENT.—To BUILDERS.—Builders desirous of TENDERING for the ERECTION of the above building are requested to send in their names to the Architect, Mr EDWARD HOLMES, 4, Waterhouse-street, Birmingham, on or before TUESDAY, the 22nd inst. The lowest or any other Tender not necessarily accepted.

(signed) JOHN CLIFTON,
December 8th, 1863 Secretary to the Building Committee

LONDON, BRIGHTON, and SOUTH-COAST RAILWAY. SOUTH CROYDON EXTENSION.—To CONTRACTORS.—TENDERS for WORKS.—The Directors are ready to receive TENDERS for the EXECUTION of the WORKS for the EXTENSION of the CROYDON LOCAL LINE to SOUTH CROYDON. Drawings and specifications, and approximate quantities of the works to be done, may be seen at the Office of the Company's Engineer, Mr F. D. BANISTER, at the London Bridge Terminus, on and after MONDAY, the 14th DECEMBER next; and Tenders (prepared in forms and addressed to the Directors, London Bridge) must be sent to the undersigned not later than NOON, on TUESDAY, the 22nd DECEMBER instant. The Directors will not be bound to accept the lowest or any Tender.

FREDERICK SLIGHT, Secretary.

London Bridge Terminus, December 10, 1863

CROYDON LOCAL BOARD of HEALTH. PUBLIC NOTICE.—To ARCHITECTS, SURVEYORS, BUILDERS, CONTRACTORS, and all Persons interested in Building Operations.—Notice is hereby given, that from and after this date any person BUILDING NEW HOUSES, or making any ALTERATIONS in any Building within the District of the Croydon Local Board of Health, must CONFORM to the provisions of the BYE LAWS of the said Board; and any person who shall in any way infringe the conditions specified in such bye laws will be liable to the penalties therein set forth.

BALDWIN LATHAM,
Engineer and Surveyor to the Croydon Local Board of Health.
Townhall, Croydon, December 9, 1863

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

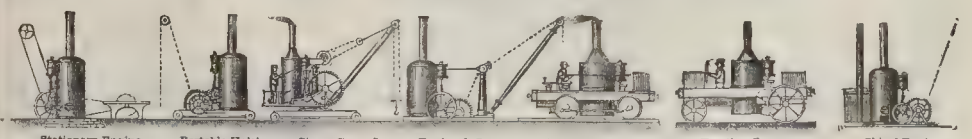
PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.



ILLUSTRATED LISTS ON APPLICATION.——INSPECTION OF SHOW-ROOM REQUESTED.

WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

NUT PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

. Illustrations and Particulars sent on application.

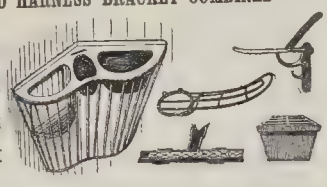
Patronized by the English and French Governments, as well as by the Nobility, Gentry, and Hunting Establishments in the Kingdom.
In use at her Majesty's Stables, Aldershott and Balmoral.



COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Watertrough, and Wrought-iron Rack, united to an iron top plate, etc. forming one complete and useful fixture, having COTTAM'S Patent Noiseless Halter Guide and Collar Hook attached, which is taken to the back of the manger, and works with ease and freedom up or down the guide bar.

COTTAM'S NEW PATENT SEED BOX, an important addition to the above fittings, being simple in construction, light, and durable, promotes cleanliness, and is economical in its result.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for the above, is a most essential addition to their fittings; it is never in the way; can be placed and replaced in an instant; while its cheapness, simplicity, and utility in keeping the contents of their racks clean, and regulating the quantity to be taken, is of great benefit to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT-IRON VENTILATING BRACKET preserves the shape and allows a free admission of air to the under parts of the saddle.

COTTAM'S IMPROVED SURFACE GUTTER, with perforated movable cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction, gives a full water passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE-BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanised, and enamelled. Iron gates, fencing, hurdles, &c.

Illustrated Catalogues and Estimates gratis, upon application to
COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.

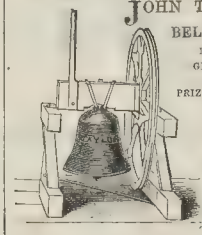
CLARK & CHARNLEY Engineers Preston.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as spreading the great desideratum of fire proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
19, YORK BUILDINGS, ADELPHI.



CLINTON & OWENS, late R. FOWLER & CO.
ENGINEERS, WHITEFRIARS STREET, FLEET STREET, E.C.

SMOKY CHIMNEYS.

S. DEACON

Respectfully invites the attention of Architects, Builders, &c to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many smoky chimneys where other caps have been of no avail.

The advantages attending this Cap are: it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it, an increased up current, and the impossibility of a down one.

Prospectus forwarded on receipt of Postage Stamps by

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.
